## Information to access the product

This product, catalogue no. 82-581-XIE, is available for free. To obtain a single issue, visit our website at [www.statcan.ca](http://www.statcan.ca) and select Our Products and Services.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136. The service standards are also published on [www.statcan.ca](http://www.statcan.ca) under About Statistics Canada > Providing services to Canadians.

## Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## **Acknowledgements**

The studies described in this document have been made possible because of the collaboration and cooperation of the provincial and territorial vital statistics and cancer registries with Statistics Canada. Many of the projects were carried out on a cost-recovery basis for various agencies, including government, cancer agencies, hospitals, private companies, and universities. Researchers at agencies such as the Atomic Energy of Canada, the National Cancer Institute of Canada, the University of Toronto, Health Canada, and Atomic Energy Control Board have partnered with Statistics Canada in several research projects relating to occupational and environmental health, data collection, the development and improvement of record linkage and statistical methods, the creation of generalized record linkage software, and the development of the national data bases for statistical uses.

Project teams have been instrumental in executing the studies over the years. These linkage projects were coordinated at Statistics Canada by: H el ene Aylwin, Maureen Carpenter, Elizabeth Coppock, Martha Fair, Bryan Lafrance, Pierre Lalonde, Joan Lindsay, Lana Marjama, Deborah Jordan-Simpson, Karen Roberts, John Silins, Mary Werner, and Dores Zuccarini.

Special mention should be made of the creative work of Pierre Lalonde in organizing and developing the Canadian Mortality Data Base, Christine Poliquin for her work on the Canadian Cancer Data Base, and Margaret Cyr for the Canadian Birth Data Base development. Ted Hill was instrumental in developing the Generalized Record Linkage System, and more recently Evelyn Perkins has been working in this area. Jane Carswell and Jean-Luc Bastien have assisted with many of these studies over the years. Dores Zuccarini has provided valuable assistance for the preparation of this publication.

We also wish to acknowledge the contribution of the late Dr. Howard Newcombe who passed away on February 14, 2005. He was an early pioneer of record linkage in Canada and provided invaluable assistance to the Occupational and Environmental Health Research Section. He participated in several record linkage workshops, and gave inspiration to many researchers in Canada and worldwide.

## Preface

### Occupational and environmental health research section

This report briefly describes over 100 studies that have been carried out by, or are related to, the activities of the Occupational and Environmental Health Research Section (OEHRs) within Health Statistics Division at Statistics Canada. The projects were originally carried out from 1978 within the Vital Statistics and Disease Registries Section at Health Division. In 1989, the Occupational and Environmental Health Research Section was created in response to researchers and the user community's demand for statistical, policy-relevant information pertaining to occupational, lifestyle, medical, socio-economic and environmental factors that influence health.

The current activities at OEHRs involve:

- 1) developing and updating national historic and current administrative surveys and administrative databases in a form suitable for record linkage purposes, such as cancer and national vital statistics data;
- 2) collaborating with agencies regarding data collection, computer linkage software development and its evaluation, and the design of feasibility studies;
- 3) partnering in the interdisciplinary development and writing of methodological and analytical research publications regarding the health of Canadians, particularly where long-term medical follow-up is required using information from linked data bases available at Statistics Canada; and
- 4) providing services to clients for cost-recovery projects.

Health at work and healthy working environments are among the most valuable assets of individuals, communities and society. According to the principles of the United Nations, World Health Organization, and the International Labour Organisation, every citizen of the world has a right to healthy and safe work and to a work environment that enables him or her to live a socially and economically productive life (WHO, 1995). Occupational health is an important strategy not only to ensure the health of workers, but also to contribute positively to productivity, quality of products, work motivation, job satisfaction, and thereby the overall quality of life of individuals and society (WHO, 1994). It is important to enhance occupational research methods because of the need to identify occupational carcinogens to protect workers and possibly the general public from further exposures. New hazards are emerging or just becoming apparent associated with the use of new occupational and medical technologies.

### Looking at the past – planning for the future

The focus of OEHRs is on the identification of data gaps and finding solutions, often through the use of record linkage. For example, at present there is no routine systematic means of linking cancer incidence, employment, industry, occupation, and workplace exposure over time and regions in Canada. The proportion of cancer cases attributable to occupational exposures is difficult to establish given the long latency period of cancer. There is a lack of data regarding exposure levels over time and many factors are involved in the development of cancer. Exposures to one particular environmental risk can often lead to a wide range of health effects, including respiratory illness and heart disease. Both exposure and health outcomes may be affected by other conditions such as genetic, social, economic and demographic factors.

Record linkage is the bringing together of one or more records relating to the same individual, person, family or entity. The removal of duplicates from a file, the linkage of cancer records with death records to create survival statistics, and the linking of records of a certain cohort to the cancer or death files for medical follow-up are three examples of record linkage projects.

The early mathematical theoretical work of Drs. Fellegi and Sunter regarding record linkage was oriented to the problem of merging the information content of large administrative files in order to create a statistically useful source of new information (Fellegi and Sunter, 1969). In the presence of identifying information on records, how does one decide which pairs of records should be regarded as linked? There was a need to reduce respondent burden and costs, improve data quality and timeliness, and make better use of existing data sources.

The early work at OEHRs concentrated on the building of the necessary computer software along with the historic and current national files required for such studies. The generalized record linkage system was developed at Statistics Canada to carry out the linkages of different files, the system being developed with a focus on its early application in the health area. This system was later updated based on advances in computer software and hardware developments and used in a variety of settings. A policy on record linkage was also developed by Statistics Canada.

The types of analytical studies have changed over the period, starting with mortality studies at the national level. Efforts have been made to add detailed work and exposure histories, with these data sources usually originating from outside agencies for particular studies. The statistical products are being used in a variety of settings both provincially and nationally, in North American studies, and for international collaborative investigations. For example, in addition to the two groups of communities most benefited by occupational cohort studies (workers and the general public), other groups of scientific communities have utilized the studies, including the International Agency for Research on Cancer (IARC). IARC has published a monograph series based on epidemiological data from studies in humans, animal and laboratory tests. Since its inception in 1972, the series has reviewed around 900 agents, and serve as invaluable sources of information both for researchers and national and international authorities. Several projects described in this current publication have been considered important by several international agencies in their assessment of the carcinogenicity of agents (e.g. nickel, aluminum, radon, butadiene and styrene) and for multi-country studies (e.g. of nuclear power industry workers).

Effective partnerships have been the key to progress made thus far, and will be even more critical in the future to meet the varying statistical needs of users. For example, progress in occupational and environmental health will require interdisciplinary and inter-agency research involving workers, epidemiologists, industrial hygienists, clinicians, methodologists, computer scientists, statisticians, data suppliers and data users. It is anticipated that there will be more extensive use of survey, census, clinical trial and morbidity data in the future.

### **Record linkage policy at Statistics Canada**

Statistics Canada carries out a wide range of record linkage work given the broad mandate of the organization. There are two main categories of record linkage currently conducted at Statistics Canada: 1) linkages to support the design, maintenance, evaluation, research and re-design of ongoing data collection and methodological studies within the Agency, and 2) linkages to provide statistical information in support of research studies. Many of the research studies are conducted on a cost-recovery basis.

A record linkage policy has been in place at Statistics Canada since 1986. This policy is publicly available on the Statistics Canada website [www.statcan.ca](http://www.statcan.ca) and summary descriptions of all linkage submissions that have been approved since 2000 are listed on this website.

Some of the features of the policy and the operational steps required for its implementation have been described in a paper "Record linkage and public policy – a dynamic evolution" presented by Dr. I. Fellegi at an *International Workshop and Exposition of Record Linkage* held in Washington, D.C. (Fellegi, 1997). Every manager at Statistics Canada who wishes to sponsor a linkage application has

to submit a proposal describing the purpose, the expected public benefits, whether there is any possibility of harm to the individuals concerned, and whether there are feasible alternative approaches. In addition, the manager also has to describe the proposed methodology, and any features that might enhance privacy or confidentiality protection, and the retention period for the linked files. All record linkage proposals must satisfy a prescribed review and approval process which involves the submission of documented proposals to an internal expert committee.

The recommendations of the review committee are forwarded to the Chief Statistician who refers for ministerial approval all recommendations he supports and which represent types of linkages not previously approved by the Minister. The Chief Statistician may also consult with the Office of the Privacy Commissioner and, in some instances, public interest groups and members of the public when considering types of linkages not previously approved by the Minister. It is the Minister who applies the ultimate judgement regarding the trade-off between the expected public benefit and the degree of privacy invasion which may be involved. The public dissemination of information resulting from record linkages, like all other statistical information, is done only in such a way as to ensure that no individual can be identified.

Record linkage is a powerful tool for generating and obtaining increased value out of existing data bases. Record linkage can assist in unravelling the complex social, economic and environmental contexts that affect individual outcomes over time. It can reduce respondent burden and costs, while also improving quality and timeliness.

### **Types of studies**

The research referenced in this publication, cuts across the complete life cycle of individuals from birth to death, including most age and disease specialties, as well as maternal and child health, cancer, and occupational and environmental health.

Studies have been carried out to enhance cancer registries and for the preparation of national survival statistics. These data are also used for health surveillance and in the development of data for health indicators (e.g. multiple birth rates, gestational age and birth weight-specific fetal and infant mortality rates).

Respondents to health surveys (e.g. the Nutrition Canada Survey), persons who participated in clinical trials (e.g. the national breast screening follow-up study) or those who received specific medical treatment and / or health care (e.g. a study to look at the expectation of health and survival among spinal cord injuries) have been followed up for statistical medical research purposes.

Studies of particular occupational groups (e.g., petroleum, sawmill, pulp and paper, nickel, radiation workers) are used to investigate cause-specific cancer and mortality. Methods have been developed for the creation of an occupational surveillance system for Canada (Aronson, Howe, Carpenter and Fair, 1990).

### **Data sources**

Several national databases, as currently described in detail on the Statistics Canada website, are used as the input data sources for national vital statistics and cancer data, namely, the Vital Statistics – Death Database, the Vital Statistics – Birth Database, the Vital Statistics – Stillbirth Database and the Canadian Cancer Registry (which evolved from the National Cancer Incidence Reporting System (NCIRS)).

These data sources are processed further to create four databases used for historic and current record linkages. Efforts have been made to improve the availability and quality of data items required for linkage and analysis. The resulting databases are called the: 1) Canadian Mortality Data Base (CMDDB); 2) Canadian Birth Data Base (CBDB); 3) Canadian Stillbirth Data Base (CSDB); and 4) Canadian Cancer Data Base (CCDB). For many long-term follow-up studies, outside clients will supply a cohort file, along with related detailed job, exposure and /or medical histories.

The Canadian Mortality Data Base contains all deaths dating back to 1950 occurring in Canada, along with the underlying cause of death. The Canadian Birth Data Base and the Canadian Stillbirth Data Base were developed for data from 1985 onward. These files have been used in a number of studies particularly relating to maternal, perinatal and infant health. The Canadian Cancer Data Base, dating back to 1969, was developed from two main sources: 1) the National Cancer Incidence Reporting System that contains data from 1969 to 1991, and 2) the Canadian Cancer Registry (CCR) from 1992 onward. The NCIRS is a fixed format, tumour-based file of cancer registrations in Canada, whereas the newer CCR system has evolved to be a dynamic, patient-oriented data base with the possibility of updates to individual histories (e.g. the addition of new primary cancers and death information). All Canadian provincial and territorial cancer registries now report their data to the CCR. From these two sources, the Canadian Cancer Data Base is created in a form suitable for use in record linkage studies. Some of the processing involves standardization and coding of name information and adding special numbers and duplicate flag information used by the generalized record linkage system. The CCDB file is linked by person and has death information added for most provinces and territories.

### **Uses of this publication**

This publication is intended to help researchers undertaking similar or new studies. It provides vital statistics and cancer registrars with information regarding the uses of national files. It documents the uses of the generalized record linkage system at Statistics Canada. It also documents the work of the Occupational and Environmental Health Research Section of Statistics Canada's Health Statistics Division and the results of the studies to date.

These data are needed by:

- the general public and communities;
- consumers, workers, unions, and industry;
- cancer agencies in developing prevention strategies;
- workplace safety and insurance boards;
- public health agencies monitoring and prioritizing actions at the international, national, provincial and community level;
- various agencies at the international, national and provincial level setting regulations and standards regarding substances,
- departments and companies developing education and training materials to ensure workers are protected by the most up-to-date standards;
- boards developing compensation criteria, and
- health researchers and economists, particularly those interested in the social and economic burden of disease and the way this information can be integrated into the ongoing development of the social security system.

## **Uniform template**

Each project is described in a uniform template format. A “template sample page” explains the details regarding each of the items and the use of superscripts letters.

The studies are presented in chronological order as they were initially carried out, with a few exceptions. Any updates for additional years for the same cohort and study are included on the same page. To identify similar studies, a search by theme is possible. A separate table of contents listed alphabetically by project is also provided.

Many of the research studies described in this publication were undertaken on a cost-recovery basis. The names of the main investigator(s) from the outside agency are provided. This document gives a list of known references detailing the record linkage methods used and the study results obtained where available. These could be papers published in peer-reviewed journals or internal working documents.

The list of publications is not an exhaustive listing regarding the complete project and their related components. Some of the criteria used for creating the list of references relating to the projects were:

- the publication related to work that was being done with emphasis on the linkages to national files, or is related to earlier work that gave results that indicated a need for a national study;
- it was a product of the study;
- the cohort was later analyzed with other similar cohorts and publications prepared; or
- the publication describes actions resulting from the study (e.g. improvement for the workers or working conditions, changes in policy).

Most publications appear in published journals and many abstracts are available using the United States National Library of Medicine’s search service PUBMED.

In the References section of this document, citations are provided for papers relating to this preface, plus several general papers regarding the development and uses of record linkage and the Canadian Birth, Cancer and Mortality Data Bases at Statistics Canada.

**Template sample page**

<b>Project</b>	This is a standard name used for the project. The name usually includes the name of the data base being used (e.g. mortality, cancer and/or birth where appropriate).
<b>Theme</b>	Keywords are used to aid researchers wanting to search for a number of projects grouped according to health themes. Examples of themes are: cancer, heart, infant mortality, mental health, occupation, and survey.
<b>Organization(s)</b>	This is the name of the organization that requested work or collaborated with Statistics Canada on the project. A superscript is used in this field only if the organization(s) involved in the study changed over time; otherwise no superscript is used. The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Description of project</b>	This is a brief description giving the purpose of the study.
<b>Years</b>	This lists the year(s) of the Canadian death, cancer and/or birth files being used. The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Number of records or individuals for the cohort</b>	This is the approximate number of individuals or records in the cohort being linked (wherever available, broken down by gender). The number of records may be larger than the number of individuals because alternate entries are generated to facilitate linkage (for example, for women an entry may be made under her birth surname as well as current surname). The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Main investigator(s)</b>	This is generally the name of the individual(s) and their organization that were identified as requesting the project at Statistics Canada. The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Project coordination</b>	This is the name of the individual(s) that coordinated the project work within Statistics Canada at the time of the project. The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Project number(s)</b>	This is the project number assigned to the project by Statistics Canada. The same superscript letter ( <sup>a,b,c...</sup> ) is used to link information contained in the organizations (if changed), years, number of records, the main investigators, project coordination and project number fields for a particular update of the study.
<b>Publications</b>	This provides references to publications relating to the project

**Project**

This is a standard name used for the project. The name usually includes the name of the data base being used (e.g. mortality, cancer and/or birth where appropriate).  
listed by publication year.

<b>Project</b>	<b>Alberta Cancer Registry Death Clearance</b>
<b>Theme</b>	Cancer – Death Clearance – Alberta
<b>Organization(s)</b>	Alberta Cancer Board
<b>Description of project</b>	The purpose of this pilot study was to develop the methodology of linking the Canadian Mortality Data Base to Cancer Registry records and to use the results of the linkage to assess various factors in cancer survival.
<b>Years</b>	Death years: 1953–1981
<b>Number of records or individuals for the cohort</b>	178,856 registered patients (both sexes). There were 98,749 patients with malignancies and the remainder were benign cases.
<b>Main investigator(s)</b>	Dr. G. Hill, Alberta Cancer Board
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1985-012

<b>Project</b>	<b>Infant Death and Birth Linkage for Canada</b>
<b>Theme</b>	Infant Mortality – Canada
<b>Organization(s)</b>	Statistics Canada
<b>Description of project</b>	The purpose of this study was to provide information on risk factors for infant deaths and perinatal mortality in Canada. An attempt was made to identify all infant deaths in Canada for the years 1978 to 1980 and to match each infant death record with the appropriate birth record. The resulting linked file was used to evaluate cause of death and mortality rates in terms of birth weight and gestational age of the infant plus maternal age and marital status of the mother, etc.
<b>Years</b>	Death years: 1978–1980 Birth years: 1978–1979
<b>Number of records or individuals for the cohort</b>	8,400 infant deaths (both sexes)
<b>Main investigator(s)</b>	John Silins, Health Statistics Division. Statistics Canada
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1986-006
<b>Publications</b>	Silins J, Semenciw R, Morrison H, Lindsay J, Sherman G, Mao Y, Wigle D. <b>Project</b>	<b>Nutrition Canada Survey Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Survey – Nutrition Canada Survey
<b>Organization(s)</b>	Health Canada Statistics Canada
<b>Description of project</b>	The purpose of this study was to examine Canadian nutritional risks and/or benefits prospectively and the relationship of mortality rates in relation to a variety of predisposing factors. Linkage to the cancer incidence file gave earlier risk estimates for cancers that do not result in death.
<b>Years</b>	Death years: 1970–1977 <sup>a</sup> 1978–1981 <sup>b</sup> 1982–1985 <sup>c</sup> 1986–1993 <sup>d</sup>  Cancer years: 1970–1986 <sup>c</sup> 1969–1993 <sup>d</sup>
<b>Number of records or individuals for the cohort</b>	The complete file has 20,147 records for 19,587 persons, including volunteers and all records. The analysis file (excluding volunteers) has 13,641 records relating to 13,262 persons.
<b>Main investigator(s)</b>	Dr. D. Wigle, <sup>a</sup> Health and Welfare Canada Dr. John W. Davies, <sup>b</sup> Health and Welfare Canada Dr. Y. Mao, <sup>c</sup> Health and Welfare Canada Dr. H. Morrison, <sup>d</sup> Health Canada

<b>Project</b>	<b>Atlantic Fishermen Mortality Study</b>
<b>Theme</b>	Occupation – Fishermen
<b>Organization(s)</b>	Health and Welfare Canada Statistics Canada
<b>Description of project</b>	The purpose of this study was to investigate the causes of death and evaluate the health effects of fishing in different levels of water pollution. The cohort was commercial fishermen who were licensed by the Canadian Department of Fisheries in Prince Edward Island, New Brunswick, and Nova Scotia.
<b>Years</b>	Death years: 1975–1983
<b>Number of records or individuals for the cohort</b>	About 33,000 records - 31,415 commercial fishermen (men) registered with the Department of Fisheries and Oceans in Nova Scotia, New Brunswick and Prince Edward Island during 1975 to 1983.
<b>Main investigator(s)</b>	Dr. I. Neutel, Health and Welfare Canada

<b>Project</b>	<b>Canadian Farmers Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Farmers
<b>Organization(s)</b>	Health Canada Statistics Canada
<b>Description of project</b>	The purpose of this study was to investigate mortality and cancer incidences among farmers, particularly in relation to the use of pesticides and herbicides. Files of the 1971 Census of Population, 1971 Census of Agriculture, 1981 Central Farm Registrar, Canadian Mortality Data Base, and the Canadian Cancer Data Base were used for the study. This study looked at potential methods for using other existing data sources, including the 1984 National Farm Survey data and longitudinal census data.
<b>Years</b>	Death years: 1971–1985 <sup>a</sup> 1971–1987 <sup>b</sup> 1971–1995 <sup>c</sup>  Cancer years: 1970–1995 <sup>c</sup> (excluding Québec in 1995)
<b>Number of records or individuals for the cohort</b>	69,000 <sup>a</sup> - male farm operators in Saskatchewan 326,865 <sup>a,b,c</sup> - male farm operators; 8,724 female farm operators.
<b>Main investigator(s)</b>	Dr. L. Ritter, <sup>a,b</sup> Health and Welfare Canada Dr. D. Morison, <sup>b</sup> Health and Welfare Canada Dr. Yang Mao, <sup>c</sup> Health and Welfare Canada
<b>Project coordination</b>	J. Silins, <sup>a</sup> Deborah Jordan-Simpson <sup>b</sup> and Martha Fair, <sup>b,c</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>National Dose Registry Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Radiation – National Dose Registry
<b>Organization(s)</b>	Health Canada <sup>a, b</sup> Atomic Energy Control Board <sup>a</sup> Statistics Canada <sup>a, b</sup>
<b>Description of project</b>	The purpose of this study was to investigate the effects of low level radiation and to determine whether there were any increases in cause-specific cancer and mortality in workers exposed to radiation in the Canadian work force that participated in the National Dose Registry (NDR). This was a multi-year project. The first step was to internally link the National Dose Registry master identification file to reduce the file from 450,000 records to about 300,000 individuals. The next step was to link to the Canadian Mortality Data Base (CMDB) and to add the NDR dose information. A second project updated the NDR cohort and exposure files and linked the updated cohort file with the CMDB and the Canadian Cancer Data Base (CCDB). These data are being used in an international study of nuclear industry workers.
<b>Years</b>	Death years: 1950–1987 <sup>a</sup> 1950–1994 <sup>b</sup>  Cancer years: 1969–1988 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	About 300,000 workers (both sexes) <sup>a</sup> About 500,000 workers (both sexes) <sup>b</sup>  For the mortality analysis, the cohort consisted of 206,620 individuals monitored for radiation exposure between 1951 and 1983 with mortality follow-up through December 31, 1987. <sup>a</sup> For the cancer incidence analysis, 191,333 individuals were extracted from 1969 to 1988 linkages. <sup>b</sup>

<b>Project</b>	<b>Atomic Energy Control Board Alive Follow-up Study</b>
<b>Theme</b>	Methodology – Alive Follow-Up – Atomic Energy Control Board – AECB Report
<b>Organization(s)</b>	Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	The purpose of this study was to investigate and develop methods to do an “alive” follow-up of cohort files to complement death searches and to test the procedures using the Ontario Miner’s file that had already been linked to deaths from 1955 to 1977. The procedures tested and developed a way to distinguish between those cohort members who were “confirmed” alive at a given time, and those who were “lost to follow-up”. A sample of 30,000 records from the Ontario Miners file with valid social insurance numbers available was used for the test. This sample cohort was linked to 27 million summary tax data for the years 1977 and 1978. The procedures developed improved the quality of the death linkages, increased the accuracy of analytical results, and reduced the cost and labour of resolving doubtful death linkages.
<b>Years</b>	Death years: 1955–1977
<b>Number of records or individuals for the cohort</b>	About 30,000 men
<b>Main investigator(s)</b>	Dr. H. Stocker, Atomic Energy Control Board
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1988-R011 for preparation of the report. See 1987-003 and 1990-002 regarding the Ontario miners study linkages.
<b>Publications</b>	Fair ME, Newcombe HB, Lalonde P, Poliquin C. <i>“Alive” Searches as Complementing Death Searches in the Epidemiological Follow-up of Ontario Miners</i> . Ottawa: Atomic Energy Control Board; 1988. Report No.: INFO–0266.

<b>Project</b>	<b>Atomic Energy Control Board Social Insurance Number Evaluation Study</b>
<b>Theme</b>	Methodology – Social Insurance Number Evaluation Study – Atomic Energy Control Board – AECB Report
<b>Organization(s)</b>	Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	The purpose of the project was to evaluate the use of the social insurance number index to facilitate death searches pertaining to Ontario Miners. The results indicated a substantial degree of improvement in the completeness and accuracy of the death searches when social insurance number identifiers were employed.
<b>Years</b>	Death years: 1964–1977
<b>Number of records or individuals for the cohort</b>	About 30,000 men
<b>Main investigator(s)</b>	Dr. H. Stocker, Atomic Energy Control Board
<b>Project coordination</b>	Martha Fair and Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1988-R012 for the preparation of the report. See 1987-003 and 1990-002 for the Ontario miners study linkages.
<b>Publications</b>	Fair ME, Newcombe HB, Lalonde P. <i>Improved Mortality Searches for Ontario Miners using Social Insurance Index Identifiers</i> . Ottawa: Atomic Energy Control Board; 1988. Report No.: INFO-0264.

<b>Project</b>	<b>Data Collection Procedures and a Standard Identity Summary Questionnaire for Occupational and Medical Follow-up Studies</b>
<b>Theme</b>	Methodology – Health Record Keeping Procedures – Data Collection – Questionnaire – Atomic Energy Control Board – AECB Report
<b>Organization(s)</b>	Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	The purpose of this study was to develop and market a recommended standard identity summary questionnaire and accompanying documentation for keeping computerized health records by industry and agencies within Canada to improve long term health monitoring and epidemiological follow-up studies. A standard questionnaire and data collection package were developed and tested.
<b>Years</b>	
<b>Number of records or individuals for the cohort</b>	
<b>Main investigator(s)</b>	K.P. Ho, Atomic Energy Control Board
<b>Project coordination</b>	Martha Fair and Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1990-R013 for preparation of the report.

<b>Project</b>	<b>Data Collection Software Developed for a Standard Identity Summary Questionnaire for Occupational and Medical Follow-up Studies</b>
<b>Theme</b>	Methodology – Health Record Keeping Procedures – Data Collection – Questionnaire – Software – Report
<b>Organization(s)</b>	Statistics Canada
<b>Description of project</b>	The purpose of this study was to develop and produce a French version of the standard identity questionnaire and the data collection package. Software was also developed for entering the data in both English and French using a personal computer. The aim was to improve computerized health records created by industries and agencies within Canada that may be used for long term health monitoring and epidemiological follow-up studies.
<b>Years</b>	
<b>Number of records or individuals for the cohort</b>	
<b>Main investigator(s)</b>	K.P. Ho, Atomic Energy Control Board
<b>Project coordination</b>	Martha Fair and Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1990-R013 for preparation of the report.

<b>Project</b>	<b>Name Encoding Schemes and Methods Used to Improve the Accuracy of Record Linkage</b>
<b>Theme</b>	Methodology – Name Encoding – Atomic Energy Control Board – AECB Report
<b>Organization(s)</b>	Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	The purpose of the project was to modify and improve the New York State Identification and Intelligence System (NYSIIS) surname encoding system used at Statistics Canada, to develop routines for matching forenames, and to evaluate the advantages of using alternative sequencing items for pocket identifiers. The overall aim was to improve the accuracy of matching and linking records for epidemiological studies.
<b>Years</b>	Death years: 1970–1979
<b>Number of records or individuals for the cohort</b>	Subset of the Mortality Data Base
<b>Main investigator(s)</b>	K.P. Ho, Atomic Energy Control Board
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1991-R015 for preparation of the report.
<b>Publications</b>	Lalonde P, Fair ME, Carpenter M, Scott T. <i>Name Encoding Schemes</i> . Ottawa: Atomic Energy Control Board; 1992. Report No.: INFO-0418.

<b>Project</b>	<b>Morbidity Feasibility Study</b>
<b>Theme</b>	Methodology – Morbidity – Atomic Energy Control Board – AECB Report
<b>Organization(s)</b>	Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	The purpose of the project was to determine the feasibility of using morbidity data in Canada for epidemiological studies to complement and supplement mortality data available through the Canadian Mortality Data Base. A report was prepared for Atomic Energy Control Board.
<b>Years</b>	
<b>Number of records or individuals for the cohort</b>	1988-R016 for preparation of the report.
<b>Main investigator(s)</b>	K.P. Ho, Atomic Energy Control Board
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1988-R016 for preparation of the report.
<b>Publications</b>	Carpenter M. <i>Morbidity Follow-up Feasibility Study</i> . Ottawa: Atomic Energy Control Board; 1988. Report No.: INFO-0269.

<b>Project</b>	<b>Atomic Energy of Canada Mortality Study</b>
<b>Theme</b>	Occupation – Radiation – Atomic Energy of Canada Workers
<b>Organization(s)</b>	Atomic Energy of Canada Limited
<b>Description of project</b>	The purpose of this study was to investigate the long-term health effects of low level radiation on human populations. The study investigated the relationship between causes of death and occupational exposure to ionizing radiation. The mortality linkages were completed at Statistics Canada and the analysis of the results carried out by the National Cancer Institute of Canada.
<b>Years</b>	Death years: 1950–1981 <sup>a</sup> 1950–1985 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	13,986 (both sexes) <sup>a</sup> - 10,357 men; 3,629 women 14,193(both sexes) <sup>b</sup> - 10,526 men; 3,667 women

<b>Project</b>	<b>Tuberculosis and Isoniazid Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Cancer – Tuberculosis – Isoniazid
<b>Organization(s)</b>	University of Toronto
<b>Description of project</b>	The purpose of this study was to determine the relationship between the isoniazid treatment and cancer. The study identified 12,498 deaths and 793 cases of cancer, but no significant excess of any cancer sites suspected to be associated with isoniazid were found. This study used an early version of the national cancer file.
<b>Years</b>	Death years: 1950–1973 Cancer years: 1969–1973
<b>Number of records or individuals for the cohort</b>	64,037 (both sexes)
<b>Main investigator(s)</b>	Dr. Geoff Howe, National Cancer Institute of Canada, Epidemiology Unit, University of Toronto
<b>Project coordination</b>	Joan Lindsay, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-021
<b>Publications</b>	Howe GR, Lindsay J, Coppock E, Miller AB. Isoniazid exposure in relation to cancer incidences and mortality in a cohort of tuberculosis patients. <i>International Journal of Epidemiology</i> 1979; 8(4): 305-312.

<b>Project</b>	<b>Canadian Labour Force 10% Sample Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Labour Force – Canada
<b>Organization(s)</b>	National Cancer Institute of Canada University of Toronto Statistics Canada
<b>Description of project</b>	The purpose of the study was to establish a monitoring system to detect associations between specific occupations and causes of cancer incidence and mortality. The data were used both to generate and test hypotheses concerning occupational exposures and increased risks of various cancers. The cancer linkage used an early version of the national cancer file.

<b>Project</b>	<b>Canadian Tuberculosis Fluoroscopy Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Cancer – Tuberculosis – Fluoroscopy
<b>Organization(s)</b>	National Cancer Institute of Canada Atomic Energy Control Board Statistics Canada
<b>Description of project</b>	<p>The Canadian fluoroscopy study was a cohort study of tuberculosis patients first treated in Canadian institutions between 1930 and 1952. A substantial proportion of the cohort was exposed to various levels of low-LET ionizing radiation through the extensive use of fluoroscopy to monitor artificial pneumothorax amongst such patients. The analysis focused on the relationship between age at first exposure to radiation and development of breast cancer in women, and also examined the dose response between the amount of radiation received and the development of breast cancer.</p> <p>This project was also used to help develop and test a suitable national cancer incidence database for record linkage. It demonstrated the feasibility and utility of establishing and maintaining the Canadian Cancer Data Base (CCDB) in a format suitable for record linkage purposes. This was the first study to be linked to the CCDB, was demonstrated to be an invaluable resource for epidemiologic studies of cancer incidence risk.</p>
<b>Years</b>	Death years: 1940–1980 <sup>a</sup> 1940–1987 <sup>b</sup>  Cancer years: 1975–1983 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	118,117 records relating to 92,891 persons <sup>a</sup> (both sexes) - 47,962 men; 44,929 women 123,283 records relating to 92,891 persons <sup>b</sup> (both sexes) - 47,962 men; 44,929 women (additional alternate records were generated for women.)

<b>Project</b>	<b>Ontario Miners and Asbestos Cement Workers Mortality Study</b>
<b>Theme</b>	Occupation – Miners – Asbestos – Cement Factory – Ontario
<b>Organization(s)</b>	Ontario Ministry of Labour Ontario Workers' Compensation Board Atomic Energy Control Board
<b>Description of project</b>	The purpose of this study was to evaluate the health risks associated with the mining industry and workers from a specific asbestos cement factory. An extension to earlier studies investigated occupational hazards of miners and other high-risk groups, plus updated and evaluated the accuracy of the mortality searches. Part of this study was used to develop methods to improve the accuracy and completeness of the death searches.
<b>Years</b>	Death years: 1955–1977 <sup>a,c</sup> 1978–1981 <sup>b</sup> (uranium miners only) 1950–1986 <sup>d</sup>
<b>Number of records or individuals for the cohort</b>	56,622 men <sup>a</sup> - 30,000 men used for the evaluation study <sup>c</sup> 16,842 men (uranium miners only) <sup>b</sup> 90,774 (both sexes) <sup>d</sup> - 89,243 men; 1,201 women; 330 not stated.

<b>Project</b>	<b>Inco Ontario Nickel Workers Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Miners – Nickel – Inco – Ontario
<b>Organization(s)</b>	McMaster University <sup>a,b,c,d</sup> Northeastern Ontario Regional Cancer Centre, Cancer Care Ontario <sup>e</sup>
<b>Description of project</b>	The purpose of this study was to determine if nickel workers were at increased risk of occupational mortality and cancer incidence. The effects of nickel and its potential carcinogenesis has been the focus of much international interest (e.g. the International Committee on Nickel Carcinogenesis in Man, chaired by Sir Richard Doll; the International Agency for Research in Cancer, the World Health Organization, and the United States Report on Carcinogens). Some linkages with this cohort have also been carried out at Cancer Care Ontario.

<b>Project</b>	<b>Inco Thompson Nickel Workers Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Miners – Nickel – Inco – Manitoba
<b>Organization(s)</b>	McMaster University <sup>a</sup> Northeastern Ontario Regional Cancer Centre, Cancer Care Ontario <sup>b</sup>
<b>Description of project</b>	The study of nickel workers examined the mortality and cancer incidence rates in the Inco Thompson cohort and compared them to the Manitoba and the Canadian populations. Specifically, the researchers wanted to identify if the work areas (e.g. open pits, refineries, smelters and mines) placed Inco nickel workers at increased risk for various diseases.

<b>Project</b>	<b>Nova Scotia – Saskatchewan Cardiovascular Disease Mortality Study</b>
<b>Theme</b>	Heart – Nova Scotia and Saskatchewan
<b>Organization(s)</b>	Health and Welfare Canada Dalhousie University University of Saskatchewan Provincial departments of Health for Nova Scotia and Saskatchewan Statistics Canada
<b>Description of project</b>	<p>This project was undertaken to assess the feasibility of using existing data sets (hospital admission-separations and mortality data) to explain observed provincial differences of acute myocardial infarction (AMI) mortality across Canada, in particular to investigate the question of AMI incidence and prognosis in Saskatchewan and Nova Scotia.</p> <p>In the first study the incidence of fatal and non-fatal acute myocardial infarction in Nova Scotia and Saskatchewan for 1977 was determined. The trends in incidence of acute myocardial infarction and related mortality in Nova Scotia and Saskatchewan for 1977, 1981 and 1985 were later investigated using hospital admission separations records linked with mortality. Whether AMI episode was a recurrent or initial one, was determined by a retrospective search of hospital admission-separations back to 1974.</p>
<b>Years</b>	<p>Death years:       1977–1981<sup>a</sup>                           1981–1985<sup>b</sup></p> <p>Hospital Morbidity: 1974–1976<sup>a</sup>                           1974–1985<sup>b</sup></p>
<b>Number of records or individuals for the cohort</b>	<p>Nova Scotia (men): 2,416 records; 2,105 individuals (1977)<sup>a</sup> Nova Scotia (women): 916 records; 801 individuals (1977)<sup>a</sup> Saskatchewan (men): 49,437 records; 49,401 individuals (1977)<sup>a</sup> Saskatchewan (women): 32,943 records; 32,905 individuals (1977)<sup>a</sup></p> <p>Nova Scotia (men): 4,159 records (1981); 4,728 records (1985)<sup>b</sup> Nova Scotia (women): 2,678 records (1981); 2,875 records (1985)<sup>b</sup> Saskatchewan (men): 4,041 records (1981); 4,414 records (1985)<sup>b</sup> Saskatchewan (women): 2,777 records (1981); 3,027 records (1985)<sup>b</sup></p>

<b>Project</b>	<b>St. Regis Indian Mortality Study</b>
<b>Theme</b>	Indian – St. Regis
<b>Organization(s)</b>	University of Ottawa
<b>Description of project</b>	The purpose of this study was to study the mortality of St. Regis Indians and to investigate their health status in relation to levels of fluoride.
<b>Years</b>	Death years: 1959–1967
<b>Number of records or individuals for the cohort</b>	3,500 (both sexes)
<b>Main investigator(s)</b>	Dr. Neri, University of Ottawa
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-041
<b>Publications</b>	Neri LC, Hammond EC, Shoe D, Collins D, Raman S (under the principal investigator – Dr. J.J. Selikoff). <i>St. Regis Indian Health Study. Final Report</i> . Ottawa: University of Ottawa, Faculty of Health Sciences, Department of Epidemiology and Community Medicine; 1983 Aug.

<b>Project</b>	<b>Canadian Military Personnel Exposed to Low-Dose Radiation Mortality Study</b>
<b>Theme</b>	Occupation – Radiation – Military – Ottawa University
<b>Organization(s)</b>	Ottawa University
<b>Description of project</b>	The purpose was to investigate a possible excess of cancer deaths amongst army personnel who were exposed to atomic bomb testing and to Chalk River nuclear reactor clean-ups. Two controls per “exposed” individual were linked to mortality data.
<b>Years</b>	Death years: 1953–1981
<b>Number of records or individuals for the cohort</b>	3,000 men
<b>Main investigator(s)</b>	Dr. S. Raman, University of Ottawa
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-042
<b>Publications</b>	<p>Caldwell GG, Kelley DB, Heath CW Jr. Leukaemia among participants’ military manoeuvres at a nuclear bomb test. <b>Project</b>	<b>Ontario Undertakers Mortality Study</b>
<b>Theme</b>	Occupation – Undertakers – Ontario
<b>Organization(s)</b>	Chemical Industry Institute of Toxicology
<b>Description of project</b>	The purpose of this study was to explore the possible carcinogenic effects of exposure to formaldehyde in humans. Since morticians have a high exposure to formaldehyde, the mortality of this population was investigated.
<b>Years</b>	Death years: 1928–1977
<b>Number of records or individuals for the cohort</b>	1,500 men
<b>Main investigator(s)</b>	Dr. R. Levine, Chemical Industry Institute of Toxicology
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-043
<b>Publications</b>	<p>Levine RJ. Mortality of Ontario undertakers. <i>Chemical Industry Institute of Toxicology Activities</i> 1982; 2(12): 3-5.</p> <p>Levine RJ, Andjelkovich DA, Shaw LK, DalCorso D. Mortality of Ontario undertakers: A first report. In: Clary JJ, Gibson JE, Waritz RS, editors. <i>Formaldehyde: Toxicology, Epidemiology and Mechanisms</i>. <b>Project</b>	<b>Spina Bifida Mortality Study</b>
<b>Theme</b>	Spina Bifida
<b>Organization(s)</b>	University of British Columbia
<b>Description of project</b>	The purpose of this study was to investigate survival of spina bifida patients in British Columbia. A manual search of the death microfiche was undertaken.
<b>Years</b>	Small manual study
<b>Number of records or individuals for the cohort</b>	100 (both sexes)
<b>Main investigator(s)</b>	Dr. P. Baird, University of British Columbia
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics, Statistics Canada
<b>Project number(s)</b>	1900-044
<b>Publications</b>	

<b>Project</b>	<b>Shell Oil Workers Mortality Study</b>
<b>Theme</b>	Occupation – Shell Oil Workers
<b>Organization(s)</b>	McGill University
<b>Description of project</b>	The purpose of this study was to study mortality in a Canadian Oil Refinery in East Montreal. A small manual search of the death microfiche was undertaken.
<b>Years</b>	Death years: 1928–1976
<b>Number of records or individuals for the cohort</b>	Small manual search
<b>Main investigator(s)</b>	Dr. G. Thériault, McGill University
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-045
<b>Publications</b>	Thériault G, Goulet L. A mortality study of oil refinery workers. <i>Journal of Occupational Medicine</i> 1979; 21(5): 367-370.

<b>Project</b>	<b>Furriers Mortality Study</b>
<b>Theme</b>	Occupation – Furriers
<b>Organization(s)</b>	Institute Armand Frappier
<b>Description of project</b>	The purpose of this study was to investigate the mortality of individuals involved in the fur industry. A manual search of the death microfiche was completed.
<b>Years</b>	Death years: 1966–1981
<b>Number of records or individuals for the cohort</b>	Small manual search
<b>Main investigator(s)</b>	Dr. J. Siemiatycki, Institute Armand Frappier
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-046
<b>Publications</b>	Guay D, Siemiatycki J. Historic cohort study in Montreal's fur industry. <i>American Journal of Industrial Medicine</i> 1987; 12(2): 181-193.

<b>Project</b>	<b>Thunder Bay Grain Handlers Mortality Study</b>
<b>Theme</b>	Occupation – Grain Handlers
<b>Organization(s)</b>	Gage Research Institute
<b>Description of project</b>	The purpose of this study was to investigate mortality among grain handlers. A manual search of the death microfiche was undertaken.
<b>Years</b>	Death years: 1969–1980
<b>Number of records or individuals for the cohort</b>	500 men
<b>Main investigator(s)</b>	Dr. I. Broder, Gage Research Institute
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-047
<b>Publications</b>	Broder I, Corey P, Davies G, Hutcheon M, Mintz S, Inouye T, Hyland R, Leznoff A, Thomas P. Longitudinal study of grain elevator and control workers with demonstration of healthy worker effect. <i>Journal of Occupational Medicine</i> 1985; 27(12): 873-880.

<b>Project</b>	<b>Breast Mammography in Ontario: The University of Toronto Mortality Study</b>
<b>Theme</b>	Cancer – Breast – Mammography – Ontario
<b>Organization(s)</b>	University of Toronto
<b>Description of project</b>	The purpose of this study was to study mortality among women who received mammography treatment. A manual search of the death microfiche was undertaken.
<b>Years</b>	Death years: 1968–1981
<b>Number of records or individuals for the cohort</b>	1,020 women
<b>Main investigator(s)</b>	Dr. M. Halliday, University of Toronto
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-048
<b>Publications</b>	

<b>Project</b>	<b>Mortality After the Death of a Spouse</b>
<b>Theme</b>	Mortality – Death of Spouse
<b>Organization(s)</b>	University of Alberta
<b>Description of project</b>	The purpose of this study was to study mortality patterns after the death of a spouse. This was a pilot study to investigate the feasibility of using British Columbia marriage records for the study. A manual search of the death microfiche was undertaken. The results of the study showed that a computerized study was technically possible.
<b>Years</b>	Death years: 1950–1981
<b>Number of records or individuals for the cohort</b>	1,018 (both sexes, married between 1946 and 1973)
<b>Main investigator(s)</b>	Dr. Grace Johnston, University of Alberta
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Division
<b>Project number(s)</b>	1900-049
<b>Publications</b>	

<b>Project</b>	<b>Army Clean-up and Bomb Tests Mortality Study</b>
<b>Theme</b>	Occupation – Radiation – Army – National Defence
<b>Organization(s)</b>	Department of National Defence
<b>Description of project</b>	The purpose of this study was to study the long term effects of radiation on Army personnel involved in the 1953 and 1958 Chalk River Reactor clean-ups and the Australia and Nevada bomb tests. A manual search of the death microfiche was undertaken. Overall the study indicated no excess deaths observed for diseases associated with radiation.
<b>Years</b>	Death years: 1953–1981
<b>Number of records or individuals for the cohort</b>	1,000 men
<b>Main investigator(s)</b>	Colonel Barnes, Department of National Defence
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-050
<b>Publications</b>	Smith ME, Lalonde P. <i>Mortality Follow-up of Canadian Servicemen Involved in Decontamination Duties at Chalk River and Observation of Nuclear Bomb Tests</i> . Ottawa: Statistics Canada, Health Statistics Division, Occupational and Environmental Health Research Section; 1984.

<b>Project</b>	<b>Welders and Plumbers Mortality Study</b>
<b>Theme</b>	Occupation – Welders and Plumbers
<b>Organization(s)</b>	The Gage Research Institute
<b>Description of project</b>	The purpose of this study was to investigate the occupational risks to plumbers and welders, in particular the possible excess of lung disease. Analysis of the data was carried out by the Gage Research Institute.
<b>Years</b>	Death years: 1950–1983
<b>Number of records or individuals for the cohort</b>	5,500 men
<b>Main investigator(s)</b>	Dr. I. Broder, The Gage Research Institute
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1985-003
<b>Publications</b>	

<b>Project</b>	<b>Down Syndrome Mortality Study</b>
<b>Theme</b>	Down Syndrome
<b>Organization(s)</b>	University of British Columbia
<b>Description of project</b>	The purpose of this study was to find deaths occurring outside British Columbia for 1,000 Down syndrome cases. A manual search of the death microfiche was carried out.
<b>Years</b>	Small manual search
<b>Number of records or individuals for the cohort</b>	1,000 (both sexes)
<b>Main investigator(s)</b>	Dr. P. Baird, University of British Columbia
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-052
<b>Publications</b>	Baird PA, Sadovnick AD. Life expectancy in Down syndrome. <i>Journal of Pediatrics</i> 1987; 110(6): 849-854.

<b>Project</b>	<b>Imperial Oil Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Imperial Oil Workers
<b>Organization(s)</b>	Imperial Oil Limited
<b>Description of project</b>	The purpose of this study was to assess mortality and cancer morbidity in Canadian petroleum workers and explore exposure-response relationship for specific petroleum agents. A follow-up case control study was undertaken to evaluate the relation between mortality from lymphohaemalopoietic cancer and long term low-level exposure to benzene among male petroleum distribution workers.
<b>Years</b>	Death years: 1964–1983 <sup>a</sup> 1964–1994 <sup>b</sup>  Cancer years: 1969–1994 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	17,445 individuals (12,543 men; 4,902 women) <sup>a</sup> 40,872 individuals (30,940 men; 9,932 women) <sup>b</sup>

<b>Project</b>	<b>Infant Death and Birth Linkage for Ontario</b>
<b>Theme</b>	Infant Mortality – Ontario
<b>Organization(s)</b>	University of Western Ontario
<b>Description of project</b>	The purpose of this study was to investigate the variance of the quality of prenatal and postnatal care between regions and over time. Infant deaths were linked to births occurring in 1970 to 1972. Statistics were compared to those from a previous linkage of infant deaths resulting from births in 1978-1979.
<b>Years</b>	Death years: 1970–1973 for infant deaths Birth years: 1970–1972
<b>Number of records or individuals for the cohort</b>	6,073 infant deaths (both sexes) linked to approximately 400,000 births
<b>Main investigator(s)</b>	Dr. Carol Buck, University of Western Ontario
<b>Project coordination</b>	Elizabeth Coppock, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1900-056

<b>Project</b>	<b>Ontario Hydro/Hydro One Networks Inc. Forestry Workers Mortality Study</b>
<b>Theme</b>	Occupation – Hydro Workers – Ontario
<b>Organization(s)</b>	Ontario Hydro/Hydro One Networks Inc.
<b>Description of project</b>	The purpose of this study was to assess the causes of death for Ontario Hydro/Hydro One Network Inc. forestry tradesmen based on duration of employment, exposure to specific herbicides, work location and to compare death rates in this trade group with those of the general population. This was a small manual search of the death records for those individuals who potentially could have been lost to follow-up. Later Canada participated in an international study coordinated by the International Agency for Research on Cancer. This study was carried out comprising 36 cohorts from 12 countries.
<b>Years</b>	Death years: 1950–1982 <sup>a</sup> 1950–1992 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	245 men <sup>a</sup> - complete analysis has 1,225 men 245 men <sup>b</sup>

<b>Project</b>	<b>British Columbia Cancer Control Agency Mortality Study</b>
<b>Theme</b>	Cancer – Death Clearance – British Columbia
<b>Organization(s)</b>	Cancer Control Agency of British Columbia
<b>Description of project</b>	The purpose of this study was to link a cohort of patients treated at the British Columbia Cancer Control Agency to the Canadian Mortality Data Base. This was carried out to assess the efficiency of passive follow-up using record linkage techniques versus active follow-up by patient contact.
<b>Years</b>	Death years: 1950–1982
<b>Number of records or individuals for the cohort</b>	20,000 individuals (both sexes) non- skin cancer patients
<b>Main investigator(s)</b>	R. Gallagher, Cancer Control Agency of British Columbia
<b>Project coordination</b>	Elizabeth Coppock, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1985-005
<b>Publications</b>	Spinelli JJ, Gallagher RP, Band PR, Threlfall WJ, Raynor D, Schellekens H. Occupational associations among British Columbia male cancer patients. <i>Canadian Journal of Public Health</i> 1990; 81(4): 254-258.

<b>Project</b>	<b>Aging in Manitoba Longitudinal Mortality Study</b>
<b>Theme</b>	Aging – Manitoba
<b>Organization(s)</b>	Manitoba Department of Health
<b>Description of project</b>	The objectives of the study were to determine the mortality of a cohort of elderly Manitobans; a) to examine the factors which may signal impending death; b) to examine the relationship which exists between cause and location of death and factors such as age, sex, and health status; and c) to determine the needs and resources of older Manitobans to assist government and non-government planners in creating more effective and efficient services for the elderly. The study involved linking individuals from the original study and a cross-sectional sample of individuals that were lost to follow-up. A small manual search of the death microfiche was done.
<b>Years</b>	Death years: 1971–1985 <sup>a</sup> 1971–1988 <sup>b</sup> 1983–1990 <sup>c</sup>
<b>Number of records or individuals for the cohort</b>	Approximately 350 individuals (both sexes) from the survey who were lost to follow-up- manual searches.
<b>Main investigator(s)</b>	Dr. Betty Havens, <sup>a,b,c</sup> Manitoba Department of Health
<b>Project coordination</b>	Martha Fair <sup>a,c</sup> and D. Jordan-Simpson, <sup>b</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>Alberta Mental Health Affective Disorders Mortality Study</b>
<b>Theme</b>	Mental Health – Affective Disorders
<b>Organization(s)</b>	Alberta Social Services and Community Health
<b>Description of project</b>	The purpose of this study was to examine the risk factors and mortality experience among patients diagnosed as having an affective disorder. The principal objective was to determine whether there was a gradient of increasing mortality risk across the following diagnostic subgroups: manic disorder, bipolar affective disorder and major depressive disorder.
<b>Years</b>	Death years: 1976–1985
<b>Number of records or individuals for the cohort</b>	4,022 patients (both sexes)
<b>Main investigator(s)</b>	Dr. S. Newman and Dr. R. Bland, Alberta Social Services and Community Health
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1987-006
<b>Publications</b>	Newman SC, Bland RC. Suicide risk varies by subtype of affective disorder. <i>Acta Psychiatrica Scandinavica</i> 1991; 83(6): 420-426.

<b>Project</b>	<b>Alberta Mental Health Schizophrenic Patients Mortality Study</b>
<b>Theme</b>	Mental Health – Schizophrenia
<b>Organization(s)</b>	Alberta Social Services and Community Health
<b>Description of project</b>	The purpose of this study was to examine the risk of mortality, particularly the risk of suicide, for schizophrenic patients. Other factors which may influence survival such as marital status, education, occupation and medical history were examined. Of particular interest was to determine if schizophrenic individuals, whether inpatients or outpatients, had a greater than average risk of mortality, and in particular if they were at greater risk of suicide.
<b>Years</b>	Death years: 1976–1985 <sup>a,b</sup>
<b>Number of records or individuals for the cohort</b>	3,623 patients (both sexes)
<b>Main investigator(s)</b>	Dr. S. Newman and Dr. R. Bland, Alberta Social Services and Community Health
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Publications</b>	Newman SC, Bland RC. Mortality in a cohort of patients with schizophrenia: a record linkage study. <i>Canadian Journal of Psychiatry</i> 1991; 36(4): 239-245.

<b>Project</b>	<b>Northern Telecom Workers Mortality Study</b>
<b>Theme</b>	Occupation – Northern Telecom
<b>Organization(s)</b>	Hôpital du Sacré-Cœur de Montréal
<b>Description of project</b>	This project was part of a three-phase research project. Phase one was a cancer incidence study of the employees in the Montreal plants of Northern Telecom Company which had been undertaken earlier. This revealed a high risk of malignant skin melanoma. Phase two examined the standardized mortality ratios for the cohort. Phase three examined the risk factors that contributed to the development of malignant skin melanomas.
<b>Years</b>	Death years: 1976–1983
<b>Number of records or individuals for the cohort</b>	575 (both sexes) - 372 men; 203 women 9,590 (both sexes, total) - 7,151 men; 2,439 women
<b>Main investigator(s)</b>	Dr. Louise De Guire, Hôpital du Sacré-Cœur de Montréal
<b>Project coordination</b>	Pierre Lalonde, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1987-037
<b>Publications</b>	<p>De Guire L, Thériault G, Iturra H, Provencher S, Cyr D, Case BW. <b>Project</b>	<b>Indian Registry Mortality Linkage Study</b>
<b>Theme</b>	Indian – Registry
<b>Organization(s)</b>	Health and Welfare Canada
<b>Description of project</b>	The purposes of this study were: a) to develop the appropriate methodology for linkage of the Indian register to mortality data; b) to determine the cost of a full study; and c) to estimate the level of accuracy for ascertainment of deaths. A pilot study was first completed to test the procedures using data for 1981.
<b>Years</b>	Death years: 1981–1983
<b>Number of records or individuals for the cohort</b>	1,932 (both sexes) - 1,178 men; 754 women
<b>Main investigator(s)</b>	Dr. D. Wigle and Yang Mao, Health and Welfare Canada
<b>Project coordination</b>	Elizabeth Coppock and Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1987-021
<b>Publications</b>	Mao Y, Moloughney BW, Semenciw RM, Morrison HI. Indian reserve and registered Indian mortality in Canada. <i>Canadian Journal of Public Health</i> 1992; 83 (5): 350-353.

<b>Project</b>	<b>Childhood Cancers and Parental Occupational Radiation Exposure Feasibility Study</b>
<b>Theme</b>	Occupation – Radiation – Children
<b>Organization(s)</b>	University of Ottawa
<b>Description of project</b>	The purpose of this pilot study was to explore the possibility of using record linkage to determine the cancer risks to children that may possibly be associated with parental occupational radiation exposure. Of particular interest was parental radiation exposure and leukaemia in offspring. The approach ultimately selected was carried out by other organizations in Ontario. This involved an ecological comparison of childhood leukaemia rates for various geographic regions. Later a case control study design was used to test the hypothesis that there is an association between childhood leukaemia and the occupational exposure of fathers to ionising radiation before a child's conception.
<b>Years</b>	Birth years: 1978–1980 manual searches
<b>Number of records or individuals for the cohort</b>	Small pilot study only
<b>Main investigator(s)</b>	Dr. S. Raman, University of Ottawa
<b>Project coordination</b>	Elizabeth Coppock, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1986-010
<b>Publications</b>	<p>Clarke EA, McLaughlin J, Anderson TW. <i>Childhood Leukaemia Around Canadian Nuclear Facilities – Phase I. Final Report</i>. Ottawa: Atomic Energy Control Board; May 1989. <b>Project</b>	<b>Celanese Canada Mortality Study</b>
<b>Theme</b>	Occupation – Celanese Workers
<b>Organization(s)</b>	McGill University
<b>Description of project</b>	The purposes of this study were: a) to evaluate the occupational health risks of the employees and former employees of the Celanese synthetic textile plant in Drummondville, Quebec, b) to investigate mortality and cancer incidence of colorectal cancer of the workers at the synthetic textile plant in Drummondville, Quebec, and c) to evaluate the accuracy of computer versus manual techniques in ascertaining vital status for this cohort.
<b>Years</b>	Death years: 1947–1986
<b>Number of records or individuals for the cohort</b>	Approximately 12,000 records (both sexes) relating to 7,487 men; 2,724 women
<b>Main investigator(s)</b>	Dr. G. Thériault and M. Goldberg, McGill University
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1989-001
<b>Publications</b>	<p>Goldberg MS. Ascertaining vital status in a historical cohort study of employees of an Eastern Townships synthetic textiles plant. <b>Project</b>	<b>Dofasco Foundry Workers Mortality Study</b>
<b>Theme</b>	Occupation – Dofasco Workers
<b>Organization(s)</b>	Dofasco Incorporated
<b>Description of project</b>	The purpose of this study was to evaluate the occupational health risks for current and former foundry workers at the Dofasco Steel Company in Hamilton, Ontario. Of particular interest was the effect of silica. Exposure and smoking histories were available.
<b>Years</b>	Death years: 1974–1986 <sup>a</sup> 1974–1990 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	8,200 men - full cohort 2,172 men; <sup>a</sup> 2,516 men <sup>b</sup> - 344 men were added
<b>Main investigator(s)</b>	Dr. E. S. Gibson <sup>a</sup> and W. Terry, <sup>b</sup> Dofasco Incorporated
<b>Project coordination</b>	Maureen Carpenter, <sup>a,b</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>Firefighters – Alberta – Mortality Study</b>
<b>Theme</b>	Occupation – Firefighters – Alberta
<b>Organization(s)</b>	University of Alberta
<b>Description of project</b>	The purpose of this study was to examine the long-term health risks for fire-fighters. Potential health risks would be derived primarily from the cumulative effects of repeated short but intense exposures to a great variety of toxic substances arising out of the combustion of an ever-changing spectrum of construction and household materials. The focus here was to determine the causes of death for cases that were potentially lost to follow-up. A manual linkage of death records was undertaken.
<b>Years</b>	Death years: 1927–1987
<b>Number of records or individuals for the cohort</b>	3,328 men from Calgary and Edmonton for the overall study 176 men (Calgary) - manual search 392 men (Edmonton) - manual search
<b>Main investigator(s)</b>	T. Guidotti, University of Alberta
<b>Project coordination</b>	Elizabeth Coppock and Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1987-025
<b>Publications</b>	Guidotti TL. Mortality of urban firefighters in Alberta, 1927-1987. <i>American Journal of Industrial Medicine</i> 1993; 23(6): 921-940.  Guidotti TL. Occupational mortality among firefighters: assessing the association. <i>Journal of Occupational and Environmental Medicine</i> 1995; 37(12): 1348-1356.

<b>Project</b>	<b>Maternal Deaths in Canada Study</b>
<b>Theme</b>	Maternal Mortality
<b>Organization(s)</b>	Health and Welfare Canada
<b>Description of project</b>	<p>The purpose of this study was to explore the anticipated effect of changes in the definition of maternal death under ICD-10 on the understanding and reporting of maternal deaths. Investigations regarding maternal deaths were and continue to be of major importance to the Canadian Perinatal Surveillance System.</p> <p>In Canada, maternal mortality reporting is based on information contained on death certificates. Deaths in Canada were being coded according to the 9<sup>th</sup> revision of the International Classification of Diseases, but since the year 2000 deaths have been classified to the 10<sup>th</sup> revision. The ICD-10 definition of maternal mortality is more comprehensive than its predecessors, more causes of death are classified under maternal mortality, and two new categories have been added: "late" maternal, which includes deaths that occur beyond the traditionally defined 42-day postpartum period, and "pregnancy-related", which includes all deaths around the time of pregnancy regardless of the causes.</p> <p>In addition, the purpose of the study was to determine whether maternal mortality was under-reported in Canada and to determine reasons for any omissions. For some years some provinces (e.g. Newfoundland) had to be excluded from the analysis, but may have been included in the record linkage phase.</p>
<b>Years</b>	<p>Death years: 1978–1982<sup>a</sup> 1988–1993<sup>b</sup></p> <p>Livebirth years: 1978–1980<sup>a</sup> 1987–1992<sup>b</sup></p> <p>Stillbirth years: 1987–1992<sup>b</sup></p>
<b>Number of records or individuals for the cohort</b>	<p>29,329<sup>a</sup> women death records (women 10–49 years, deaths excluded Newfoundland)</p> <p>780,388<sup>a</sup> (both sexes) birth records (births excluded Newfoundland and Québec)</p> <p>43,565<sup>b</sup> women death records (women 10–50 years)</p> <p>14,427<sup>b</sup> (both sexes) stillbirth records</p> <p>2,350,594<sup>b</sup> (both sexes) livebirth records</p>

<b>Project</b>	<b>National Breast Screening Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Cancer – Breast – National Breast Screening Study – NBSS – Mammography
<b>Organization(s)</b>	Department of Preventive Medicine and Biostatistics (now Department of Public Health Sciences), University of Toronto
<b>Description of project</b>	<p>The Canadian National Breast Screening Study (NBSS) was a randomized clinical trial which began in 1980, to determine the efficacy of screening for women aged 40 to 49 and 50 to 59. Women were recruited in 15 centres across Canada and randomly assigned to study or control groups. All members of the study groups were given annual mammography and physical examination for four or five annual screens. Women aged 40 to 49 years that were in the control group had one physical (or clinical) breast examination and were followed annually by mail, whereas the controls aged 50 to 59 had annual physical breast examinations. Identified breast cancers were followed indefinitely. The protocol required that the cohort be linked to national health files. All participants in the study signed informed consent giving permission for future linkages and follow-up.</p> <p>The women were linked to the Canadian Mortality Data Base (CMDB) and the Canadian Cancer Data Base (CCDB) to determine the causes of death and cancer incidence. Additional linkages were carried out to aid in determining the vital status of the cohort. All breast cancer cases detected during the course of the study were followed directly with annual reports from their physicians.</p> <p>A number of additional related papers were published regarding NBSS breast self examination, including evaluation of performance and effect on mortality and quality control.</p>
<b>Years</b>	<p>Death years: 1981–1988<sup>a</sup>  1981–1993<sup>b</sup>  1981–1999<sup>c</sup></p> <p>Cancer years: 1969–1993<sup>b</sup>  1969–1999 (1998 for Quebec)<sup>c</sup></p>
<b>Number of records or individuals for the cohort</b>	89,835 women, <sup>a,b,c</sup> aged 40–59, on entry to the study
<b>Main investigator(s)</b>	Dr. A.B. Miller, Dr. G. Howe, Dr. T. To, Dr. C.J. Baines, and C. Wall, <sup>a,b</sup> University of Toronto Dr. Tom Rohan and Dr. A.B. Miller, <sup>c</sup> University of Toronto

<b>Project</b>	<b>Canada Fitness Survey Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Survey – Canada Fitness Survey
<b>Organization(s)</b>	Health and Welfare Canada Canadian Fitness and Lifestyle Research Institute
<b>Description of project</b>	The purpose of this study was to link the 1981 Canada Fitness Survey to the Canadian Mortality Data Base to ascertain mortality rates by age and sex for different diseases and to examine the possible relationships between fitness and activity levels and risk of premature death, or death due to cardiovascular disease or cancer. The cohort was also linked to the Canadian Cancer Data Base.
<b>Years</b>	Death years: 1981–1988 <sup>a</sup> 1981–1993 <sup>b</sup>  Cancer years: 1981–1991 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	23,400 individuals <sup>a,b</sup> (both sexes)
<b>Main investigator(s)</b>	Cora Craig, <sup>a</sup> Canadian Fitness and Lifestyle Research Institute Dr. Yang Mao, <sup>b</sup> Health and Welfare Canada
<b>Project coordination</b>	Elizabeth Coppock <sup>a</sup> and Maureen Carpenter, <sup>b</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1990-004; <sup>a</sup> 1996-013 <sup>b</sup>

<b>Project</b>	<b>Census Occupation Data and the Ontario Cancer and Mortality Data Base: A Feasibility Linkage Study</b>
<b>Theme</b>	Occupation – Census
<b>Organization(s)</b>	Ontario Cancer Treatment and Research Foundation
<b>Description of project</b>	The purpose of this study was to undertake a feasibility study for following up a census-based cohort for cancer incidence and mortality. This allowed the creation of an occupational data base to study the incidence of mortality and cancer by occupation and other socio-economic characteristics in Ontario.
<b>Years</b>	Census years: 1986
<b>Number of records or individuals for the cohort</b>	15,700 (both sexes) aged 25–64 selected from 1986 2B long forms for Ontario - (about 10,125 individuals for the linkage test)
<b>Main investigator(s)</b>	Dr. Lorraine Marrett, The Ontario Cancer Treatment and Research Foundation
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>Polysar Synthetic Rubber Workers Mortality Study</b>
<b>Theme</b>	Occupation – Polysar Workers
<b>Organization(s)</b>	McMaster University <sup>a,b</sup> University of Alabama <sup>b,c,d</sup>
<b>Description of project</b>	The purpose of this study was to examine risk factors and the mortality experience of Polysar employees in Sarnia, Ontario and to determine if there was health risks associated with exposure to chemicals or processes used in the production of synthetic rubber. Of particular interest was the mortality and cancer incidence for workers in styrene-butadiene polymer production. The cohort file and mortality were subsequently updated. The updated study was the Canadian portion of a combined North American study of synthetic workers sponsored by the U.S. Health Effects Institute. This institute provided scientific information on the health effects of pollutants from motor vehicles and other sources in the environment.
<b>Years</b>	Death years: 1950–1987 <sup>a</sup> and in Ontario 1943–1949 <sup>a</sup> 1950–1992 <sup>b</sup> 1950–1998 <sup>c</sup> and in Ontario 1943–1949 <sup>c</sup> 1950–2002 <sup>d</sup>
<b>Number of records or individuals for the cohort</b>	6,105 men <sup>a</sup> 6,301 men <sup>b</sup> 6,298 men <sup>c</sup> Approximately 2,600 women <sup>d</sup>
<b>Main investigator(s)</b>	Dr. David Muir, <sup>a,b</sup> Ni Jadon <sup>b</sup> and Jim Julian, <sup>b</sup> McMaster University Dr. Elizabeth Delzell <sup>b,c,d</sup> and Dr. Nalini Sathiakumar, <sup>c,d</sup> University of Alabama

<b>Project</b>	<b>Manitoba Workers Exposed to Polychlorinated Biphenyls Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Polychlorinated Biphenyls – PCB – Manitoba
<b>Organization(s)</b>	University of Manitoba
<b>Description of project</b>	The purpose of this study was to examine the risk factors and mortality experiences of employees who were exposed to polychlorinated biphenyls (PCB's) while working for Federal Pioneer in Winnipeg also of interest was to assess whether occupational exposure to PCB's increase the risk of cancer and whether a dose-response relationship could be demonstrated.
<b>Years</b>	Death years: 1950–1989 <sup>a</sup> 1990–1995 <sup>b</sup>  Cancer years: 1969–1995 <sup>b</sup> (1994 for Quebec)
<b>Number of records or individuals for the cohort</b>	2,224 men <sup>a</sup> - 309 persons with no birth dates 2,222 men <sup>b</sup>

<b>Project</b>	<b>Stirling County Mortality Study</b>
<b>Theme</b>	Mental Health – Psychiatry – Stirling County
<b>Organization(s)</b>	Psychiatric Epidemiology Unit, Massachusetts General Hospital
<b>Description of project</b>	<p>The purposes of this study were: a) to provide mortality information to help determine the epidemiology of psychiatric disorders, and b) to investigate predictor variables for mortality risk within a large longitudinal study in psychiatric epidemiology (with adult population samples taken in 1952, 1970, and 1992). The overall purpose for this study was to provide a better understanding of psychiatric disorders in order to improve treatment and reduce mortality. This cohort has been followed up earlier for mortality in the province of Nova Scotia.</p> <p>The Stirling County Study now provides a longitudinal perspective of the epidemiology of psychiatric disorders in an adult population in Atlantic Canada.</p>
<b>Years</b>	Death years: 1968–1989 <sup>a</sup> 1950–1992 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	2,346 (both sexes) <sup>a</sup> - 1,098 men; 1,248 women 2,701 (both sexes) <sup>b</sup> - 1,287 men; 1,414 women
<b>Main investigator(s)</b>	Dr. Jane Murphy, Psychiatric Epidemiology Unit, Massachusetts General Hospital
<b>Project coordination</b>	Martha Fair <sup>a</sup> and Maureen Carpenter, <sup>b</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>Air Canada Pilots Mortality Study</b>
<b>Theme</b>	Occupation – Pilots
<b>Organization(s)</b>	Cancer Control Agency of British Columbia
<b>Description of project</b>	The purpose of this study was to determine if airline pilots were at increased risk of cancer from exposure to carcinogens or mutagens, particularly ionizing radiation, ozone and jet engine emissions. This was a small manual search of the death microfiche was undertaken. The main purpose was to ensure that there were not deaths among persons lost to follow-up.
<b>Years</b>	Death years: 1950–1992
<b>Number of records or individuals for the cohort</b>	Total cohort 2,740 men - 161 individuals were searched
<b>Main investigator(s)</b>	Dr. Pierre Band, British Columbia Cancer Control Agency
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1992-014
<b>Publications</b>	<p>Band PR, Spinelli JJ, Ng VTY, Moody J, Gallagher RP. <b>Project</b>	<b>British Columbia Sawmill Workers Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Sawmill Workers – Sawmills – British Columbia
<b>Organization(s)</b>	University of British Columbia
<b>Description of project</b>	The original purpose of this study was to examine the health effects of chlorophenate fungicides, which are no longer used in British Columbia sawmills. The cancers of interest <i>a priori</i> were soft-tissue sarcoma, non-Hodgkin's lymphoma, Hodgkin's disease, lung cancer, and nasal cancer. Other issues including wood dust, noise accidental deaths, stress, unemployment and retraining were examined in this British Columbia sawmill cohort. A number of epidemiologic and exposure assessment studies were carried out in the province for this cohort.
<b>Years</b>	Death years: 1950–1990 <sup>a</sup> 1991–1995 <sup>b</sup> 1950–1995 <sup>c</sup>  Cancer years: 1969–1995 <sup>c</sup> (1995 Quebec data not available)
<b>Number of records or individuals for the cohort</b>	26,506 men <sup>a,b</sup> 28,903 (both sexes) <sup>c</sup> - 28,699 men; 204 women
<b>Main investigator(s)</b>	Dr. Kay Teschke, <sup>a,b</sup> University of British Columbia Dr. P. Demers, <sup>c</sup> University of British Columbia

<b>Project</b>	<b>Heart Valve Fractures Mortality Study</b>
<b>Theme</b>	Heart – Heart Valve Fractures
<b>Organization(s)</b>	Epidemiology Resources Incorporated
<b>Description of project</b>	The purpose of this study was to help identify predictors of heart valve fractures in patients. The case-control study was of convexo-concave (CC) 60 degrees valves implanted in patients in the United States and Canada and manufactured between January 1, 1979 and March 31, 1984.
<b>Years</b>	Death years: 1979–1990
<b>Number of records or individuals for the cohort</b>	150 individuals (both sexes)
<b>Main investigator(s)</b>	Dr. Anne Prener, Epidemiology Resources Inc.
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1993-004
<b>Publications</b>	Walker AM, Funch DP, Sulsky SI, Dreyer NA. Patient factors associated with strut fracture in Bjork-Shiley 60 degrees convexo-concave heart valves. <i>Circulation</i> 1995; 92(11): 3235-3239.

<b>Project</b>	<b>Trends in 5-Year Mortality of Hospital Survivors of Myocardial Infarctions (MONICA)</b>
<b>Theme</b>	Heart – Monitoring Cardiovascular Disease – MONICA
<b>Organization(s)</b>	Dalhousie University, Division of Cardiology
<b>Description of project</b>	The primary objective of this study was to examine whether the five-year survival of patients with acute myocardial infarction (AMI) increased during the study period. The overall purpose was to make informed decisions about which acute-care measures were associated with a change in mortality. This could lead to a more targeted use of treatments and medicine or a re-assessment of their use in general to improve the health outcomes of AMI patients. The World Health Organization monitoring trends and determinants of cardiovascular disease (MONICA) Project is a study that monitors deaths due to coronary heart disease, acute myocardial infarction, coronary care, and risk factors in men and women aged 35 to 64 in defined communities.
<b>Years</b>	Death years: 1984–1998
<b>Number of records or individuals for the cohort</b>	3,900 individuals (both sexes) - 2,700 men; 1,200 women
<b>Main investigator(s)</b>	Dr. Iqbal R. Bata and Dr. Hermann Wolf, Dalhousie University, Division of Cardiology
<b>Project coordination</b>	Dores Zuccarini, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	2001-015

<b>Project</b>	<b>Left Ventricular Dysfunction (SOLVD and X-SOLVD) Patients Mortality Study</b>
<b>Theme</b>	Heart – Studies of Left Ventricular Dysfunction – SOLVD – Extended Studies of Left Ventricular Dysfunction – X-SOLVD
<b>Organization(s)</b>	University of North Carolina
<b>Description of project</b>	The primary aim of this study was to examine the long-term mortality of individuals in the SOLVD and X-SOLVD cohorts who were given enalapril during the clinical study. The study explored the relationships between early enalapril treatment and life expectancy for the population. The hypothesis was whether or not the early use of enalapril treatment had an affect on long-term mortality. In the studies of left ventricular dysfunction enalapril reduced mortality in patients with symptomatic but not asymptomatic left ventricular systolic dysfunction. The study was randomized, double-blind, and placebo-controlled. The extended follow-up of SOLVD (X-SOLVD) was to establish if the mortality reduction with enalapril among patients with heart failure was sustained, and whether a subsequent reduction in mortality would emerge among those with asymptomatic ventricular dysfunction.
<b>Years</b>	Death years: 1988–1990 <sup>a</sup> - manual search 1986–1998 <sup>b</sup> - computer search
<b>Number of records or individuals for the cohort</b>	1,046 individuals (both sexes, Canada) <sup>a</sup> 6,800 U.S. and Canada 750 individuals (both sexes) <sup>b</sup> of whom 250 were from the first linkage.

<b>Project</b>	<b>Child Cancer Historical Cohort Mortality Study</b>
<b>Theme</b>	Cancer – Children
<b>Organization(s)</b>	Health Canada
<b>Description of project</b>	The purpose of this study was to create an analysis file for all children diagnosed in Canada with cancer and to identify resulting childhood deaths.
<b>Years</b>	Death years: 1969–1991 Cancer years: 1969–1988
<b>Number of records or individuals for the cohort</b>	18,400 (both sexes)
<b>Main investigator(s)</b>	Dr. Yang Mao and Dr. Howard Morrison, Health Canada
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1993-016
<b>Publications</b>	Hutchcroft S, Clarke A, Mao Y, Desmeules M, Dryer D, Hodges M, Leclerc J-M, McBride M, Pelletier W, Yanofsky R. <i>THIS BATTLE WHICH I MUST FIGHT: Cancer in Canada's Children and Teenagers</i> . Ottawa: Supply and Services Canada, 1995.

<b>Project</b>	<b>British Columbia Pulp and Paper Workers Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Occupation – Pulp and Paper – British Columbia
<b>Organization(s)</b>	British Columbia Cancer Agency
<b>Description of project</b>	The purpose of this study was to provide data on significant risk factors affecting the pulp and paper industry. The International Agency for Research on Cancer (IARC) was conducting an international epidemiological study of workers in the pulp and paper industry involving several countries.
<b>Years</b>	Death years: 1950–1992 Cancer years: 1969–1993
<b>Number of records or individuals for the cohort</b>	31,275 men; 35 women
<b>Main investigator(s)</b>	Dr. Pierre Band, British Columbia Cancer Agency
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1994-018

<b>Project</b>	<b>Ontario and Manitoba Pulp and Paper Industries Mortality Study</b>
<b>Theme</b>	Occupation – Pulp and Paper – Ontario and Manitoba
<b>Organization(s)</b>	Ontario Ministry of Labour
<b>Description of project</b>	The purpose of this study was to look at specific causes of death which were found to be significantly increased among pulp and paper workers and then to use the results in nested case-control studies to provide further answers in terms of exposure-response relationships.
<b>Years</b>	Death years: 1950–1995 <sup>a,b</sup>
<b>Number of records or individuals for the cohort</b>	27,742 individuals (both sexes) - 26,372 men; 1,370 women - Ontario Pulp and Paper workers 2,261 individuals (both sexes) - 2,136 men; 1,495 women - Manitoba Pulp and Paper workers 30,003(total) - 28,508 men; 1,495 women
<b>Main investigator(s)</b>	Dr. Murray Finklestein, Ontario Ministry of Labour

<b>Project</b>	<b>Ontario and Quebec Breast Implant Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Cancer – Breast Implant – Ontario and Québec
<b>Organization(s)</b>	Health Canada
<b>Description of project</b>	The purpose of this study was to determine the risk of cancer, mortality and other outcomes in women with cosmetic breast implants. This was a collaborative population-based study with investigators from Laval University and Cancer Care Ontario. The cohort was to be compared with a control group of women who received other elective cosmetic surgery at the same practices, and then to the general female population, identified from cancer and death registry data.
<b>Years</b>	Death years: 1974–1997 Cancer years: 1974–1997
<b>Number of records or individuals for the cohort</b>	43,406 women (13,428 Ontario and 29,978 Quebec during the period 1974–1989)
<b>Main investigator(s)</b>	Dr. Yang Mao, Health Canada Dr. Eric Holowaty, Cancer Care Ontario Dr. Jacques Brisson, Laval University
<b>Project coordination</b>	Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1998-018
<b>Publications</b>	Notice to Physicians: Ontario and Quebec breast implant study. <i>Canadian Family Physician</i> 1996; 42: 2219-2220. <b>Project</b>	<b>Nova Scotia Internal Linkage and Death Clearance</b>
<b>Theme</b>	Cancer – Death Clearance – Nova Scotia
<b>Organization(s)</b>	Health Canada Nova Scotia Cancer Foundation Statistics Canada
<b>Description of project</b>	The purpose of this study was to internally link the Nova Scotia Cancer registry by person and to link the registry to mortality.
<b>Years</b>	Death years: 1969–1989
<b>Number of records or individuals for the cohort</b>	Approximately 75,000 (both sexes)
<b>Main investigator(s)</b>	Dr. Yang Mao, Health and Welfare Canada
<b>Project coordination</b>	Mary Werner, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1992-001
<b>Publications</b>	Fair ME, Newcombe HB. <i>Death Clearance in Provincial Cancer Registries</i> . Ottawa: Statistics Canada, Health Statistics Division, Occupational and Environmental Health Research Section; 1989. Report No.: OEHR5-6.

<b>Project</b>	<b>Canadian Cancer Data Base Death Clearance</b>
<b>Theme</b>	Cancer – Death Clearance – Canada
<b>Organization(s)</b>	Statistics Canada <sup>a,b</sup> Health Canada <sup>c</sup>
<b>Description of project</b>	<p>The purpose of the national historical death clearance was to internally link the 1969 to 1991 Canadian Cancer Data Base by person and to link the file to mortality.</p> <p>Additional linkages are done routinely, starting with 1992 cancer incidence data, to enable the efficient operation of the ongoing cancer database by identifying duplicate records, by combining records belonging to the same patient, and by carrying out a death clearance.</p>
<b>Years</b>	1992–2001 <sup>a,b</sup> 1969–1991 <sup>c</sup>
<b>Number of records or individuals for the cohort</b>	1,664,867 records (both sexes) <sup>a,b</sup> for 1992-2001 relating to 1,247,927 individuals (excluding Quebec 2001) 2,637,533 records (both sexes) <sup>c</sup> for 1969-1991 relating to about 1.9 million individuals
<b>Main investigator(s)</b>	Dr. Yang Mao, <sup>c</sup> Health Canada

<b>Project</b>	<b>Spinal Cord Injury Mortality Study</b>
<b>Theme</b>	Spinal Cord – Injury
<b>Organization(s)</b>	Lyndhurst Hospital
<b>Description of project</b>	The purpose of this study was to offer information about independence and life satisfaction over the lifespan for individuals with traumatic spinal cord injury. The study used the health expectancy methodology to estimate expectations of the remaining years of life that may be spent in states of independence and satisfaction with life. The individuals in the study had incurred a spinal cord injury between the ages of 25 and 34, between the years 1945 and 1990 in central and south-eastern Ontario.
<b>Years</b>	Death years: 1945–1992 <sup>a</sup> 1945–1996 <sup>b</sup>
<b>Number of records or individuals for the cohort</b>	3,050 - complete cohort 277 (both sexes) <sup>a</sup> - 242 men; 35 women 475 (both sexes) <sup>b</sup> - 415 men; 60 women
<b>Main investigator(s)</b>	Mary Ann McColl, <sup>a</sup> Lyndhurst Hospital Janice Walker, <sup>a,b</sup> Lyndhurst Hospital

<b>Project</b>	<b>Ontario Construction Workers and Pipefitters: Mortality and Workplace Exposures Study</b>
<b>Theme</b>	Occupation – Construction Workers – Pipefitters – Ontario
<b>Organization(s)</b>	Ontario Ministry of Labour
<b>Description of project</b>	The purpose of this study was to determine if construction workers were at an increased risk of occupational mortality and cancer incidence. During the study, visits were made to a variety of construction sites in Ontario in order to identify factors that affected occupational exposure of construction workers and to conduct a range-finding exercise for common occupational contaminants.
<b>Years</b>	Death years: 1960–1999
<b>Number of records or INDIVIDUALS FOR THE cohort</b>	124,145 (both sexes) - 123,034 men; 1,111 women
<b>Main investigator(s)</b>	Dr. Murray Finklestein, Ontario Ministry of Health
<b>Project coordination</b>	Dores Zuccarini, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Project</b>	<b>Canadian Immigrant Health: Patterns of Mortality and Cancer Incidence Study</b>
<b>Theme</b>	Immigrants
<b>Organization(s)</b>	Health Canada Statistics Canada
<b>Description of project</b>	The purpose of this study was to determine if patterns of cancer and mortality differed between immigrants, immigrant subgroups, refugees and Canadians. The immigrant cohort consisted of samples of refugees and non-refugees selected from all immigrants to Canada during the period 1980 to 1990.
<b>Years</b>	Death years: 1980–1998  Cancer years: 1989–1998
<b>Number of records or individuals for the cohort</b>	Refugee sample: 128,962 (both sexes) Non-refugee sample: 241,010 (both sexes)
<b>Main investigator(s)</b>	Dr. Yang Mao, Centre for Chronic Disease Prevention and Control, Health Canada
<b>Project coordination</b>	Bryan Lafrance, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	2001-017
<b>Publications</b>	Payne J, Desmeules M, Gold J, Cao Z, Vissandjee B, Fair M, Mao Y. <b>Project</b>	<b>Alcan British Columbia, a Study of Mortality and Cancer Incidence in British Columbia Aluminum Workers</b>
<b>Theme</b>	Occupation – Alcan Workers – British Columbia
<b>Organization(s)</b>	British Columbia Cancer Agency
<b>Description of project</b>	The purpose of this study was to provide valuable information which can lead to safer working and environmental conditions for the workers in the aluminium industry and for the population in general. The long-term nature of this study will provide more accurate data on the deaths due to cancer and on significant risk factors which could lead the industry to improving its processes, developing appropriate preventive strategies and reducing and controlling exposure to hazardous carcinogens. An earlier study was done provincially on mortality and cancer incidence.
<b>Years</b>	Death years: 1954–1999 Cancer years: 1969–999
<b>Number of records or individuals for the cohort</b>	About 7,068 employees (both sexes) - 6,455 men; 613 women
<b>Main investigator(s)</b>	Dr. Nhu Le, Senior Scientist/Biostatistician, British Columbia Cancer Agency
<b>Project coordination</b>	Hélène Aylwin, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	2002-018
<b>Publications</b>	Spinelli JJ, Band PR, Svirchev LM, Gallagher RP. <b>Project</b>	<b>Alcan Québec, a Study of Mortality in Québec Aluminum Smelter Workers</b>
<b>Theme</b>	Occupation – Alcan Workers – Québec
<b>Organization(s)</b>	Safety Health Environment International Consultants Corporation (for Alcan Inc.)
<b>Description of project</b>	<p>The purposes of this study were to determine: a) if the mortality from specific causes, in particular those identified as possible concerns in the original study of the Quebec cohorts, were still increased in comparison to Quebec provincial rates; b) if cancer mortality risks which have been suggested as being increased in aluminium smelter workers on the basis of other studies, have validity; and c) if the causes of death identified were related to coal tar pitch volatile exposures.</p> <p>The long-term nature of this study will provide more accurate information on the deaths due to cancer and on significant risk factors which could lead the industry to improving its processes, developing appropriate preventive strategies and reducing and controlling exposure to hazardous carcinogens.</p>
<b>Years</b>	Death years: 1950–1999
<b>Number of records or individuals for the cohort</b>	17,722 individuals (both sexes) - 16,744 men; 978 women
<b>Main investigator(s)</b>	Dr. Graham Gibbs, Safety Health Environment International Consultants Corporation
<b>Project coordination</b>	Martha Fair, Maureen Carpenter and Dores Zuccarini, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada

<b>Theme</b>	Occupation – Nurses
<b>Organization(s)</b>	University of British Columbia
<b>Description of project</b>	The purposes of this study were to: a) determine if there was an increased risk in nurses of mortality and incidence of all cancers, as well as specific malignancies, including breast, ovarian, kidney and leukemia, in comparison to the British Columbia population; b) evaluate whether employment in a particular job category and duration of employment is associated with an increased risk of cancer incidence or mortality; and c) determine if there was a dose-response relationship according to duration and intensity of estimated exposure to anaesthetic gases, ionizing radiation and anti-neoplastic drugs. The cohort related to nurses who were members of the registered nurses association of British Columbia between 1974 and 2000.
<b>Years</b>	Death years: 1974–2000 Cancer years: 1969–2000
<b>Number of records or individuals for the cohort</b>	58,000 individuals (both sexes) - 56,000 women; 2,000 men
<b>Main investigator(s)</b>	Dr. Helen Ward, University of British Columbia
<b>Project coordination</b>	Dores Zuccarini, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	2002-021
<b>Publications</b>	

<b>Project</b>	<b>Poets Mortality Study</b>
<b>Theme</b>	Occupation – Poets
<b>Organization(s)</b>	California State University
<b>Description of project</b>	The purpose of this study was to determine the vital status of an occupational group of individuals born before 1910. A small manual search of the death microfiche was undertaken.
<b>Years</b>	Death years: 1926–1984
<b>Number of records or individuals for the cohort</b>	Small manual linkage of about 200 individuals
<b>Main investigator(s)</b>	Dr. Arnold T. Schwab, California State University
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1986-020
<b>Publications</b>	

<b>Project</b>	<b>Transit Worker – Alberta – Mortality Study</b>
<b>Theme</b>	Occupation – Transit Workers – Alberta
<b>Organization(s)</b>	University of Alberta
<b>Description of project</b>	The purpose of this study was to examine the long-term health risks for transit workers, primarily bus drivers, in the City of Edmonton. The focus here was to determine the causes of death for cases that were potentially lost to follow-up.
<b>Years</b>	Death years: 1927–1987
<b>Number of records or individuals for the cohort</b>	219 subjects, all men from Edmonton for the overall study. Approximately 10 men (Edmonton) - manual search.
<b>Main investigator(s)</b>	T.L. Guidotti, University of Alberta
<b>Project coordination</b>	Elizabeth Coppock and Maureen Carpenter, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1987-025
<b>Publications</b>	Guidotti TL. Mortality of urban transit workers: indications of an excess of deaths by suicide using gas. <i>Occupational Medicine (London)</i> 1992; 4(3): 125-128.

<b>Project</b>	<b>Proctor and Gamble Mortality Study</b>
<b>Theme</b>	Osteoporosis – Medical Treatment – Risedronate
<b>Organization(s)</b>	Proctor and Gamble
<b>Description of project</b>	The purpose of this study was to investigate the safety and efficacy of risedronate treatment in a cohort of women with postmenopausal osteoporosis.
<b>Years</b>	Death years: 1993–1998
<b>Number of records or individuals for the cohort</b>	435 individuals (both sexes)
<b>Main investigator(s)</b>	Greg Stephenson, Proctor and Gamble Pharmaceutical, Canada
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1999-025
<b>Publications</b>	

<b>Project</b>	<b>Amyotrophic Lateral Sclerosis Mortality Study</b>
<b>Theme</b>	Sclerosis – Amyotrophic Lateral Sclerosis – ALS
<b>Organization(s)</b>	University of Saskatchewan
<b>Description of project</b>	The purpose of this study was to determine the vital status of a small number of individuals lost to follow-up for a study of amyotrophic lateral sclerosis (ALS).
<b>Years</b>	Small manual search
<b>Number of records or individuals for the cohort</b>	10 records
<b>Main investigator(s)</b>	Dr. Walter Hader, University of Saskatchewan
<b>Project coordination</b>	Martha Fair, Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1991-017
<b>Publications</b>	

<b>Project</b>	<b>Fetal and Infant Health Study</b>
<b>Theme</b>	Infant Mortality – Fetal and Infant Health – Canada
<b>Organization(s)</b>	Health Canada <sup>a</sup> Public Health Agency of Canada <sup>b</sup> Statistics Canada <sup>a,b</sup>
<b>Description of project</b>	This project is an ongoing surveillance and analysis of fetal and infant mortality in Canada by maternal and infant characteristics. The mandate of the Canadian Perinatal Surveillance System (CPSS) at Health Canada is to contribute to improved health for pregnant women, mothers, and infants in Canada through ongoing monitoring and reporting on perinatal health determinants and outcomes. The Fetal and Infant Health Study Group (FIHSG) is an essential component of the Canadian Perinatal Surveillance System developed by Health Canada. The FIHSG primarily uses existing data sources for its surveillance efforts, such as the linked birth and infant death file. The long term aim is to improve the effectiveness and efficiency of clinical perinatal care and public health practice and to guide policy development for maternal and infant health.
<b>Years</b>	Birth years: 1985–2000 <sup>a</sup> 2001–2005 <sup>b</sup> Death years: 1985–2001 - relating to infant deaths <sup>a</sup> 2001–2006 - relating to infant deaths <sup>b</sup>  Death years are for all provinces and territories, except for Newfoundland prior 1991. Ontario data for 1985 onwards are not always analyzed due to data quality problems.
<b>Number of records or individuals for the cohort</b>	Infant deaths are linked to livebirths for each calendar year. For example, in 1985, there were about 2,400 death records and 368,000 livebirths that were linked, whereas in 2000 there are about 1,700 death records and 328,000 livebirths. Fetal deaths are included on the analysis file.
<b>Main investigator(s)</b>	Dr. Catherine McCourt, <sup>a</sup> Health Canada Dr. Hajnal Malnar-Szakacs, <sup>b</sup> Public Health Agency for Canada
<b>Project coordination</b>	Martha Fair, <sup>a</sup> H�el�ene Aylwin, <sup>a</sup> and Karen Roberts, <sup>b</sup> Occupational and Environmental Health Research Section, Health Statistics Division, Statistics Canada
<b>Project number(s)</b>	1997-024 <sup>a</sup> 2005-003 <sup>b</sup>

**Appendix 1. Projects sorted alphabetically by theme**

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Aging – Manitoba	Aging in Manitoba Longitudinal Mortality Study	92
AIDS	AIDS Registry Mortality Study	116
Cancer – Breast – British Columbia	British Columbia Breast Cancer Mortality Study	55
Cancer – Breast – Mammography – Ontario	Breast Mammography in Ontario: The University of Toronto Mortality Study	77
Cancer – Breast – National Breast Screening Study – NBSS – Lifestyle – Diet – Smoking – Obesity	National Breast Screening – Lifestyle and Diet, Mortality and Cancer Incidence Study	105
Cancer – Breast – National Breast Screening Study – NBSS – Mammography	National Breast Screening Mortality and Cancer Incidence Study	103
Cancer – Breast Implant – Ontario and Québec	Ontario and Québec Breast Implant Mortality and Cancer Incidence Study	129
Cancer – Children	Child Cancer Historical Cohort Mortality Study	124
Cancer – Death Clearance – Alberta	Alberta Cancer Registry Death Clearance	17
Cancer – Death Clearance – British Columbia	British Columbia Cancer Control Agency Mortality Study	91
Cancer – Death Clearance – Canada	Canadian Cancer Data Base Death Clearance	131
Cancer – Death Clearance – Nova Scotia	Nova Scotia Internal Linkage and Death Clearance	130
Cancer – Tuberculosis – Fluoroscopy	Canadian Tuberculosis Fluoroscopy Mortality and Cancer Incidence Study	49
Cancer – Tuberculosis – Isoniazid	Tuberculosis and Isoniazid Mortality and Cancer Incidence Study	45
Down Syndrome	Down Syndrome Mortality Study	81
Heart – Chest Pain – Children	Pediatric Chest Pain Mortality Study	141
Heart – Heart Valve Fractures	Heart Valve Fractures Mortality Study	120
Heart – Monitoring Cardiovascular Disease – MONICA	Trends in 5-Year Mortality of Hospital Survivors of Myocardial Infarctions (MONICA)	121

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Heart – Nova Scotia and Saskatchewan	Nova Scotia – Saskatchewan Cardiovascular Disease Mortality Study	68
Heart – Revascularization	Acute Myocardial Infarction Patients, Canada Versus the United States: Impact of Early Revascularization on Long-Term Mortality	122
Heart – Studies of Left Ventricular Dysfunction – SOLVD – Extended Studies of Left Ventricular Dysfunction – X-SOLVD	Left Ventricular Dysfunction (SOLVD and X-SOLVD) Patients Mortality Study	123
Immigrants	Canadian Immigrant Health: Patterns of Mortality and Cancer Incidence Study	136
Indian – Registry	Indian Registry Mortality Linkage Study	96
Indian – St. Regis	St. Regis Indian Mortality Study	70
Infant Mortality – Fetal and Infant Health – Canada	Fetal and Infant Health Study	147
Infant Mortality – Canada	Infant Death and Birth Linkage for Canada	19
Infant Mortality – Census	Census Birth and Infant Death Study for Ontario	88
Infant Mortality – Indians	Maternal Deaths and Fetal and Infant Outcome Study in Canada: Feasibility of the Use of the Indian Registries Population	127
Infant Mortality – Ontario	Infant Death and Birth Linkage for Ontario	86
Maternal Mortality	Maternal Deaths in Canada Study	101
Mental Health – Affective Disorders	Alberta Mental Health Affective Disorders Mortality Study	93
Mental Health – Psychiatry – Stirling County	Stirling County Mortality Study	114
Mental Health – Schizophrenia	Alberta Mental Health Schizophrenic Patients Mortality Study	94
Mental Health – Suicide	Suicide Attempts Survival Analysis Study	118
Methodology – Alive Follow-Up – Atomic Energy Control Board – AECB Report	Atomic Energy Control Board Alive Follow-Up Study	33
Methodology – Health Record Keeping Procedures – Data Collection – Questionnaire – Atomic Energy Control Board – AECB Report	Data Collection Procedures and a Standard Identity Summary Questionnaire for Occupational and Medical Follow-up Studies	35

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Methodology – Health Record Keeping Procedures – Data Collection – Questionnaire – Software – Report	Data Collection Software Developed for a Standard Identity Summary Questionnaire for Occupational and Medical Follow-up Studies	36
Methodology – Morbidity – Atomic Energy Control Board – AECB Report	Morbidity Feasibility Study	38
Methodology – Name Encoding – Atomic Energy Control Board – AECB Report	Name Encoding Schemes and Methods Used to Improve the Accuracy of Record Linkage	37
Methodology – Social Insurance Number Evaluation Study – Atomic Energy Control Board – AECB Report	Atomic Energy Control Board Social Insurance Number Evaluation Study	34
Mortality – Death of Spouse	Mortality After the Death of a Spouse	78
Occupation – Alcan Workers – British Columbia	Alcan British Columbia, a Study of Mortality and Cancer Incidence in British Columbia Aluminum Workers	138
Occupation – Alcan Workers – Québec	Alcan Québec, a Study of Mortality in Québec Aluminum Smelter Workers	139
Occupation – Asbestos – Bendix	Bendix – Stanford Research Institute Mortality Study	56
Occupation – Celanese Workers	Celanese Canada Mortality Study	98
Occupation – Census	Census Occupation Data and the Ontario Cancer and Mortality Data Base: A Feasibility Linkage Study	110
Occupation – Construction Workers – Pipefitters – Ontario	Ontario Construction Workers and Pipefitters: Mortality and Workplace Exposures Study	135
Occupation – Dofasco Workers	Dofasco Foundry Workers Mortality Study	99
Occupation – Dow Chemical Workers	Dow Chemical Canada Mortality and Cancer Incidence Study	84
Occupation – Farmers	Canadian Farmers Mortality and Cancer Incidence Study	24
Occupation – Firefighters – Alberta	Firefighters – Alberta – Mortality Study	100
Occupation – Firefighters – Toronto	Firefighters – Metro Toronto – Mortality Study	109
Occupation – Fishermen	Atlantic Fishermen Mortality Study	23
Occupation – Furriers	Furriers Mortality Study	75
Occupation – Glass Fibre – Guelph	Guelph Fibreglass Canada Mortality Study	66

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Occupation – Glass Fibre – Sarnia	Sarnia Glass Fibre Workers Mortality and Cancer Incidence Study	64
Occupation – Grain Handlers	Thunder Bay Grain Handlers Mortality Study	76
Occupation – Gulf War – Persian Gulf War – Veterans	Canadian Persian Gulf War Veterans Mortality and Cancer Incidence Study	137
Occupation – Hydro Workers – Ontario	Ontario Hydro/Hydro One Networks Inc. Forestry Workers Mortality Study	89
Occupation – Imperial Oil Workers	Imperial Oil Mortality and Cancer Incidence Study	82
Occupation – Labour Force – Canada	Canadian Labour Force 10% Sample Mortality and Cancer Incidence Study	46
Occupation – Miners – Asbestos – Cement Factory – Ontario	Ontario Miners and Asbestos Cement Workers Mortality Study	51
Occupation – Miners – Fluorspar – Newfoundland	Newfoundland Fluorspar Miners Mortality and Cancer Incidence Study: Radon-Progeny Exposure and Lung Cancer Risk Study	27
Occupation – Miners – Nickel	Inco Ontario – Falconbridge Nickel Workers Internal Linkage	57
Occupation – Miners – Nickel – Falconbridge	Falconbridge Ontario Nickel Workers Mortality Study	58
Occupation – Miners – Nickel – Inco – Manitoba	Inco Thompson Nickel Workers Mortality and Cancer Incidence Study	63
Occupation – Miners – Nickel – Inco – Ontario	Inco Ontario Nickel Workers Mortality and Cancer Incidence Study	60
Occupation – Miners – Uranium	Ontario Miners Study and Eldorado Nuclear Limited Study Internal Linkage	41
Occupation – Miners – Uranium – Eldorado	Eldorado Nuclear Uranium Workers Mortality and Cancer Incidence Study	42
Occupation – Northern Telecom	Northern Telecom Workers Mortality Study	95
Occupation – Nurses	Nurses in British Columbia: A Retrospective Cohort Study of Mortality and Cancer Incidence	142
Occupation – Polychlorinated Biphenyls – PCB – Manitoba	Manitoba Workers Exposed to Polychlorinated Biphenyls Mortality and Cancer Incidence Study	113
Occupation – Polychlorinated Biphenyls – Pearson Airport	Pearson Airport Polychlorinated Biphenyls Exposure Mortality Study	108
Occupation – Pilots	Air Canada Pilots Mortality Study	117

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Occupation – Poets	Poets Mortality Study	143
Occupation – Polysar Workers	Polysar Synthetic Rubber Workers Mortality Study	111
Occupation – Pulp and Paper – British Columbia	British Columbia Pulp and Paper Workers Mortality and Cancer Incidence Study	125
Occupation – Pulp and Paper – Ontario and Manitoba	Ontario and Manitoba Pulp and Paper Industries Mortality Study	126
Occupation – Radiation – Army – National Defence	Army Clean-up and Bomb Tests Mortality Study	79
Occupation – Radiation – Atomic Energy of Canada Workers	Atomic Energy of Canada Mortality Study	39
Occupation – Radiation – Children	Childhood Cancers and Parental Occupational Radiation Exposure Feasibility Study	97
Occupation – Radiation – Military – Ottawa University	Canadian Military Personnel Exposed to Low-Dose Radiation Mortality Study	71
Occupation – Radiation – National Dose Registry	National Dose Registry Mortality and Cancer Incidence Study	30
Occupation – Railway Workers	Canadian National Railway Workers Mortality Study	48
Occupation – Sawmill Workers – Sawmills – British Columbia	British Columbia Sawmill Workers Mortality and Cancer Incidence Study	119
Occupation – Shell Oil Workers	Shell Oil Workers Mortality Study	74
Occupation – Sherritt Workers	Sherritt Mortality Study	85
Occupation – Transit Workers – Alberta	Transit Workers – Alberta – Mortality Study	144
Occupation – Undertakers – Ontario	Ontario Undertakers Mortality Study	72
Occupation – Welders and Plumbers	Welders and Plumbers Mortality Study	80
Offenders – Young Offenders	Young Offenders Mortality Study	115
Organ Replacement – Canadian Organ Replacement Register – CORR	Canadian Organ Replacement Register (CORR) Mortality and Cancer Incidence Study	133
Osteoporosis – Medical Treatment – Risedronate	Proctor and Gamble Mortality Study	145
Ralston Building	Ralston Building Mortality Study	67
Rheumatoid Arthritis – Medical Treatment – Azathioprine – AZA	Rheumatoid Arthritis Azathioprine Registry Mortality and Cancer Incidence Study	128

<b>Theme</b>	<b>Project Name</b>	<b>Page</b>
Sclerosis – Amyotrophic Lateral Sclerosis – ALS	Amyotrophic Lateral Sclerosis Mortality Study	146
Spina Bifida	Spina Bifida Mortality Study	73
Spinal Cord – Injury	Spinal Cord Injury Mortality Study	134
Survey – Canada Health Survey	Canada Health Survey Mortality Study	22
Survey – Canada Fitness Survey	Canada Fitness Survey Mortality and Cancer Incidence Study	107
Survey – Nutrition Canada Survey	Nutrition Canada Survey Mortality and Cancer Incidence Study	20
Traffic – Accident – Ontario	Ontario Traffic and Motor Vehicle Accident Mortality Study	88
