## Nature of Research and Development, 2000 to 2004

## Highlights

- ► In the 2000-2004 period, close to two-thirds of current intramural R&D expenditures by Canadian firms was allocated to developing and improving products. Basic and applied research and the development and improvement of processes ranked second and third with 17% and 16% of total spending, while developing and improving technical services accounted for a very modest portion of expenditures at 4%. However, it should also be noted that the portion of expenditures allocated to developing and improving products fell slightly but steadily from 68% in 2000 to 63% in 2004 (Table 3).
- ► The portion of current intramural R&D expenditures targeting radical change (defined as the sum of expenditures devoted to basic research and to developing new products, processes and technical services) remained unchanged in 2004 compared with 2000 at 58% of total spending. However, for 2004, this percentage was 68% for firms controlled by countries other than Canada and the United States (Tables 4 and 5).
- ▶ Between 2000 and 2004, the percentage of current intramural R&D expenditures allocated to basic and applied research was substantially higher among firms controlled by countries other than Canada and the United States. In contrast, while the portion of expenditures linked to product development and improvement fell from 69% in 2000 to 62% in 2004 among Canadian-controlled firms, this percentage rose slightly among firms controlled by American interests (Table 6).
- ► In 2004, product development and improvement activity was the main beneficiary of current intramural R&D spending by firms in the majority of industrial sectors, with only one exception, the mining and oil and gas extraction sector. Over 42% of total expenditures by the mining and oil and gas extraction sector was allocated to the development and improvement of processes (Tables 7 to 9).

- Since 2000, the portion of current intramural R&D expenditures of the manufacturing sector allocated to developing and improving processes has increased by 4% to 16% of total spending, while that allocated to product development and improvement has fallen steadily from 73% in 2000 to 68% in 2004 (Tables 7 to 9).
- ► The choice of type of activity varied based on the size of the company; firms with fewer than 100 employees tended to allocate a larger portion of current intramural R&D expenditures to basic and applied research than larger companies (over 2,000 employees), which focused more on developing and improving processes (Tables 10 and 11).
- ► In almost all provinces and territories, over 50% of R&D expenditures by companies was allocated mainly to product development and improvement. The only exceptions were Alberta, Nova Scotia and Saskatchewan where the other three types of activities monopolize the majority of spending (Tables 12 and 13).
- ► There were, however, differences in the choice of activity between the various provinces. While basic and applied research activities represented 32% of total spending in Saskatchewan, the rate was only 19% in Nova Scotia where more spending was allocated to developing and improving processes (27%). Companies in Alberta allocated over 51% of their R&D expenditures to basic and applied research activities and to developing and improving processes, at 25% and 26% respectively, while the national average for these two activities was 16% respectively (Tables 12 and 13). Lastly, New Brunswick had the largest percentage of expenditures allocated to developing and improving processes at 33% in 2004.

## Note to users:

The statistics in this bulletin are derived from the 2004 survey of industrial R&D activities in Canada, which covers firms spending a million dollars or more on the performance or funding of R&D in Canada, and from the administrative data of the Canada Revenue Agency (CRA) for firms which spend less than a million dollars on the performance or funding of R&D in Canada. CRA data are supplemented with estimates data, to allow for the timing difference between CRA filing and the survey. This is explained in the note on Methodology on page 14. The 2004 survey, conducted in 2005, collected data on actual R&D spending for 2004, on preliminary figures for 2005, and on spending intentions for 2006.

This bulletin uses data from companies on the nature of R&D activities. The companies that were involved in the 2004 survey and those for which the data was obtained from the Canada Revenue Agency (CRA) were asked to respond to the following question:

Please estimate, in terms of the percentage of the current R&D expenditures, the approximate distribution of your R&D effort in 2005.

- ✓ Basic research (no specific practical application in view)
- ✓ Applied research (with a specific practical application in view)
- ✓ New product development
- Existing product improvement
- ✓ New process development
- ✓ Existing process improvement
- ✓ New technical services development
- ✓ Existing technical services improvement

R&D statistics are provided for 46 industries falling under 6 sub-groups: Agriculture, forestry, fishing and hunting; Mining and oil and gas extraction; Utilities; Construction; Manufacturing; and, Services industries. The industry breakdown is in accordance with the *North American Industry Classification System* Canada *2002* (NAICS) (Catalogue no. 12-501-XPE) and is necessary to preserve the confidentiality of the respondents. In a small number of cases, adjustments to the NAICS classification was necessary in order to adhere to the international guidelines for science and technological surveys as defined in the Organisation for Economic Co-operation and Development (OECD) *Frascati Manual: Proposed Standard Practice for Surveys on Research and Experimental Development, 2002*.

## Table 1 Distribution of current intramural R&D expenditures by type of activity, 2000 to 2004

|   | 2000   | 2001   | 2002             | 2003   | 2004   |
|---|--------|--------|------------------|--------|--------|
|   |        | in mil | lions of dollars |        |        |

## Table 4 Distribution of current intramural R&D expenditures by type of change, 2000 to 2004

\* Due to rounding, components may not add to the totals.

1. Radical change is the sum of current intramural R&D expenditures devoted to basic research and to developing new products, new processes and new technical services.

2. Gradual change is the sum of current intramural R&D expenditures devoted to applied research and to improving existing products, existing processes and existing technical services.

## Table 9 Distribution of current intramural R&D expenditures by type of change and by industry sector, 2000 to 2004

\* Due to rounding, components may not add to the totals.

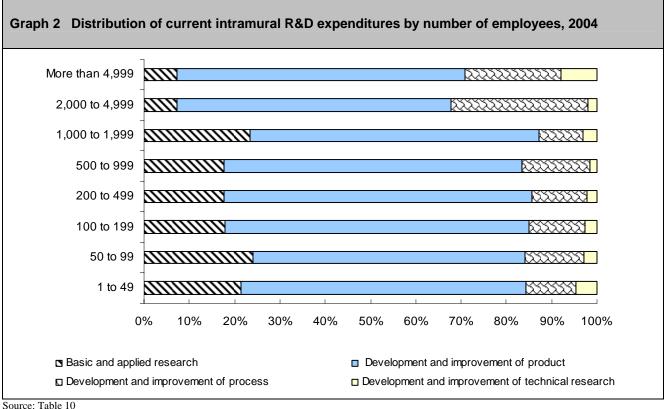

1. Radical change is the sum of current intramural R&D expenditures devoted to basic research and to developing new products, new processes and new technical services.

2. Gradual change is the sum of current intramural R&D expenditures devoted to applied research and to improving existing products, existing processes and existing technical services.

\* Due to rounding, components may not add to the totals.

1. Radical change is the sum of current intramural R&D expenditures devoted to basic research and to developing new products, new processes and new technical services.

2. Gradual change is the sum of current intramural R&D expenditures devoted to applied research and to improving existing products, existing processes and existing technical services.

1. Radical change is the sum of current intramural R&D expenditures devoted to basic research and to developing new products, new processes and new technical services.

2. Gradual change is the sum of current intramural R&D expenditures devoted to applied research and to improving existing products, existing processes and existing technical services.

## Methodology

The Annual survey "Research and Development in Canadian Industry, 2004" was mailed out in June 2005, to all companies known to be performing or funding \$1 million or more in R&D. The data collected from this survey are augmented by tax data for those companies falling below the \$1 million threshold.

Prior to 1997, Statistics Canada surveyed all firms that performed or funded R&D in Canada. Virtually all of these firms also provided information to CRA in order to claim tax benefits under the Scientific Research and Experimental Development (SR&ED) program. In an effort to reduce respondent burden, Statistics Canada stopped surveying the small performers and funders (those with less than \$1 million of R&D in Canada) and instead, imputed their R&D data using CRA administrative data from the SR&ED program.

This initiative resulted in an understatement of the total value of intramural expenditure and of the total number of R&D personnel, for the most recent years reported. The understatement was a result of the different time frame for the collection of the survey and the administrative data. Beginning last year a new estimation system was put in place to impute values for these outstanding data. The estimation system uses industry trends and Statistics Canada's extensive Business Register database, to ensure the company is active, before applying an estimate.

The 2004 survey collected data on four years. The four years were: 2003 for which the data are expected to be final; 2004, for which the data are expected to be close to final, 2005 for which the data are planned expenditures, and 2006 for which the data are a forecast of spending intentions.

Data from the surveyed firms in 2004 represent approximately 86% of the total expenditures. Estimates are not available for administrative data for 2005 and 2006. Therefore, based on the percentage increase or decrease by industry reported by the surveyed firms, forecasts are made for planned expenditures and spending intentions based on the administrative data.

Trends in R&D spending are important economic signals and the trends are not seriously affected by a small estimation of the outstanding CRA data. For this reason, the R&D data are published as soon as possible after the survey is conducted, and revised in subsequent publications.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and
- the value that was rounded
- p preliminary
- revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- <sup>E</sup> use with caution
- F too unreliable to be published

## Other symbols

i intentions

Note: Due to rounding, components may not add to totals.

This publication was prepared by Jason Leonard, Karim El Hassani and Shannon Mackinnon, under the direction of Louise Earl, Science, Innovation and Electronic Information Division. http://www.statcan.ca:8096/bsolc/english/bsolc?catno=88-001-X

Current publications of the Science and Technologies Surveys section include:

*Industrial Research and Development, 2005 Intentions* (with 2004 preliminary estimates and 2003 actual expenditures) Catalogue No. 88-202-XIE, annual. It presents statistics on research and development (R&D) activities performed and funded by Canadian business enterprises. The report covers current and capital expenditures on R&D, R&D as a percent of performing company revenues, R&D expenditures by province, the company's country of control, personnel engaged in R&D and payments for technological services.

### http://www.statcan.ca:8096/bsolc/english/bsolc?catno=88-202-X

*Federal Science Activities, 2004-2005,* Catalogue No. 88-204-XIE, annual. It presents statistics on the federal government's activities in science and technology (S&T). It covers expenditures and full-time equivalent by type of science, performing sectors, provinces, federal departments and agencies.

### Note of appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable, courteous, and fair manner. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on <u>www.statcan.ca</u> under About us > Providing services to Canadians.
