Vol. 80, No. 11

# **Highlights, November 2003**

Total freight loaded by Canadian railway carriers in November 2003 reached 23.0 million metric tonnes. This represents a 4% decrease over October 2003 and a 6% increase over November of last year.

While November typically shows a decline from October, the year over year 6% increase is partly a reflection of higher crop yield which resulted in an increase in wheat and other cereal grain loadings. Increases in iron ore and potash loadings also contributed to the rise.

The non-intermodal portion of freight loaded on Canadian railroads for November 2003 totalled 263 thousand carloads and 20.7 million tonnes. This represents a 3.7% drop from October of this year and a 6.8% increase in tonnage over November of last year. Non intermodal freight represents approximately 90% of the total tonnage loaded on Canadian railways.

#### The top five commodity groupings in metric tonnes and rail cars, November 2003

commodity Grouping Millions of tonnes Commodity Gro		Commodity Grouping	Thousands of rail cars
Iron ores & concentrates	2.9	Iron ores & concentrates	31
Coal	2.7	Coal	27
Wheat	1.6	Wheat	18
Potash	1.1	Lumber	12
Lumber	1.0	Potash	12

These top five groups of commodities accounted for 44.3% of the November tonnage and for 37.6% of the car loadings.

Loadings for the intermodal portion, which is "containers on flat cars" and "trailers on flat cars", totalled 2.3 million tonnes. Following the overall trend for all cargo loaded, where a decline from October and a rise from last year is observed, intermodal loadings showed a 6.4% drop from October 2003 and a 2% rise from November 2002. The steeper drop in intermodal loadings (6.4%) from the overall (4%) could be a reflection of the stronger Canadian dollar. Since a significant proportion of intermodal loadings are destined for the US a stronger dollar may make Canadian goods less appealing for our southern neighbours.

The cumulative total for January to November of 2003 (excluding intermodal loadings) climbed to 212.8 million tonnes, compared with 218.7 million tonnes for the same period in 2002. Weak coal loading had the greatest influence on the decline while higher than last year loadings of iron ore played an important role in reducing the gap.

Cumulative tonnage for intermodal traffic for January to November reached 24.2 million tonnes, compared with 22.8 million tonnes for the same period of 2002.

Traffic received from the United States destined for Canada or passing through Canada back into the United States reached 2.7 million tonnes, down 2.6% from October. From January to November, U.S. loadings destined for Canada reached 27.9 million tonnes, compared with 24.6 million tonnes in the same period of 2002. The strength of the Canadian dollar, giving Canadian buyers a greater purchasing power, might explain part of the observed increase in received traffic.

January 2004

## **Note of Appreciation**

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

# Methodology and concepts

The *Railway Carloadings (Monthly)* publication presents essential data for timely analysis of the Rail Transport Industry and its contribution to the Canadian economy. Approximately 40 rail carriers report each month on their total intermodal and non-intermodal<sup>1</sup> traffic of the previous month. For non-intermodal traffic, the carriers report the number of cars and tonnes by commodity of revenue-generating freight that they have loaded in Canada. For intermodal freight, the carriers report the number of units and tonnes for containers-on-flat-cars (C.O.F.C.) and trailers-on-flat-cars (T.O.F.C.), with no commodity detail. The carriers also report the total tonnage of revenue freight received from United States connections.

The total quantity of freight carried in Canada is the sum of the non-intermodal and intermodal freight loaded and the traffic received from U.S. connections. Additional information provided includes the number of units and tonnes of C.O.F.C. and T.O.F.C received from U.S. connections and the total tonnes of cargo that the carriers received from other Canadian connections. This freight that is exchanged among Canadian based carriers is counted only once in the total quantity of freight moved as it is counted only when loaded. For intermodal freight, twenty-foot equivalent units (TEUs) are derived from the dimensions of the freight-laden containers. Empty containers are not included in these statistics.

The data are collected via questionnaires and electronic reports that are filed with Statistics Canada eight working days after the reference month. These questionnaires are captured and edited and the data are then aggregated to produce tables for all of Canada and the Eastern and Western divisions of Canada<sup>2</sup>. Tables show the data for the reference month and the year-to-date. These year-to-date figures include revisions of data from previous months.

Users of *Railway Carloadings (Monthly)* current and historical data should be aware of a break in the continuity of these data. Starting with the January 1999 reference period, the commodities presented in the *Railway Carloadings (Monthly)* publication were modified to conform to the Standard Classification of Transported Goods (SCTG) and the number of carriers surveyed more than doubled from the eighteen carriers surveyed prior to 1999.

The additional carriers were primarily shortline carriers whose data were previously included with the data of mainline carriers. The change in commodity classes has had negligible impact on the reporting of bulk commodities (e.g., wheat, potash and coal) which represent the majority of the total number of cars and tonnes. However, the reporting of manufactured and miscellaneous goods has changed significantly.

Details of the commodities included in each SCTG class presented in *Railway Carloadings (Monthly)* are available upon request. For further information, please contact Transportation Statistics, Statistics Canada, Ottawa, Ontario, K1A 0T6 (tel.: 1-866-500-8400, Internet: TransportationStatistics@statcan.ca.)

<sup>1</sup> Intermodal traffic is for freight carried in containers or truck trailers that are loaded onto flat cars.

## Footnotes:

- Data included in table 1 and 4 represent about 40 railway carriers.
- <sup>2</sup> Includes carloadings of gypsum.
- <sup>3</sup> Excludes goods transported in containers or trailers on flat cars.

### Symbols:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- <sup>p</sup> preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

#### Standards of service to the public

Statistics Canada is committed to serving its client in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service, which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

The Eastern and Western Divisions, for statistical purposes, are separated by an imaginary line running from Thunder Bay to Armstrong, Ontario. Freight loaded at Thunder Bay is included in the Western Division while loadings at Armstrong are reported in the Eastern Division.
