

# Service Bulletin Monthly Railway Carloadings

# December 2006

### **Highlights**

- Business edged down for Canadian railways last year in the wake of lower shipments in key sectors of the
  economy, especially wood and paper, and automobiles.
- Railway carriers loaded a total of 287.0 million metric tonnes of goods in 2006, down 0.5% from the record high of 288.5 million tonnes in 2005.
- The decline occurred despite strong a two-way flow of goods to and from Asian nations. Demand has been high from Asian countries for Canada's primary goods. In turn, China and its Asian neighbours have been emerging as suppliers of manufactured goods to the North American market.
- As a result, Canadian railways loaded more than 3.2 million rail cars and more than 1.8 million containers in 2006.
- Loadings directly related to the wood and paper industry fell by more than 6.5% in 2006, representing a total reduction of about 45,000 carloads. However, they still accounted for about 20% of all rail loadings across Canada.
- As well, loadings of commodities related to the automotive manufacturing sector showed signs of weakness. Parts
  and accessories for motor vehicles appeared most affected. Compared to 2005, loadings of these commodities
  fell from 35,360 carloads to 27,850, a 21.2% drop.
- Other major commodities such as coal and potash also dipped in 2006. Loadings of coal were down by 8.2%.
   Loadings of potash, phosphate rock and fertilizer, which are all strongly interrelated, generated 201,700 carloads last year. However, this was 36,000 fewer carloads than in 2005, a 15.1% decline.
- On the brighter side, the rail industry had a strong year in freight related to the agricultural and food sector. Thanks
  to strong loadings of wheat, and the highest ever loadings of colza and oil seeds, carloadings in 2006 were the
  second highest since 1999.
- Loadings of goods moved in multimodal containers also played an important part in last year's results. Canadian
  rail carriers reported loading about 3.1 million TEUs in 2006, an increase of 162,000 from 2005. This growth is
  expected to continue as more and more goods, even those traditionally moved in bulk, are often seen shipped in
  containers.
- Furthermore, 2006 set a new record high for traffic received from the United States. Compared to 2005, goods received from south of the border exceeded 28.6 million metric tonnes, up 1.4 million tonnes from previous year. This was twice the gain between 2004 and 2005.
- Finally, traffic received from Canadian connections, which could be described as an indicator of the level of
  interaction between railways, dropped by an unprecedented 7.7 million metric tonnes. This was, in part, a
  reflection of the fewer number of carriers operating Canada's railways.
- For 2006 as a whole, railways loaded 258.7 million metric tonnes of goods in the non-intermodal section, down 0.8% from 2005. The intermodal section totalled 28.3 million tonnes, up 3.0%.

#### Monthly Railway Carloadings

- On a monthly basis, railways loaded a total of 22.7 million metric tonnes in December, down 7.9% from November, and a 3.8% decline from December 2005.
- Loadings of non-intermodal goods dropped 7.8% from November to 20.5 million tonnes. Intermodal loadings followed suit, declining 8.6%. These drops are typical for December and January.
- Freight coming from the United States, either destined or passing through Canada, showed little change from November, at 2.5 million tonnes.

## Methodology and concepts

The **Railway Carloadings (Monthly)** publication presents essential data for timely analysis of the Rail Transport Industry and its contribution to the Canadian economy. Approximately 40 rail carriers report each month on their total intermodal and non-intermodal traffic. For non-intermodal traffic, the carriers report the number of cars and tonnes by commodity of revenue-generating freight that they have loaded in Canada. For intermodal freight, the carriers report the number of units and tonnes for containers-on-flat-cars (C.O.F.C.) and trailers-on-flat-cars (T.O.F.C.), with no commodity detail. The carriers also report the total tonnage of revenue freight received from United States connections.

The total quantity of freight carried in Canada is the sum of the non-intermodal and intermodal freight loaded and the traffic received from U.S. connections. Additional information provided includes the number of units and tonnes of C.O.F.C. and T.O.F.C received from U.S. connections and the total tonnes of cargo that the carriers received from other Canadian connections. This freight that is exchanged among Canadian based carriers is counted only once in the total quantity of freight moved as it is counted only when loaded. For intermodal freight, twenty-foot equivalent units (TEUs) are derived from the dimensions of the freight-laden containers. Empty containers are not included in these statistics.

The data are collected via questionnaires and electronic reports that are filed with Statistics Canada eight working days after the reference month. These questionnaires are captured and edited and the data are then aggregated to produce tables for all of Canada and the Eastern and Western divisions of Canada.<sup>3</sup> Tables show the data for the reference month and the year-to-date. These year-to-date figures include revisions of data from previous months.

Users of Railway Carloadings (Monthly) current and historical data should be aware of a break in the continuity of these data. Starting with the January 1999 reference period, the commodities presented in the Railway Carloadings (Monthly) publication were modified to conform to the Standard Classification of Transported Goods (SCTG) and the number of carriers surveyed more than doubled from the eighteen carriers surveyed prior to 1999.

The additional carriers were primarily shortline carriers whose data were previously included with the data of mainline carriers. The change in commodity classes has had negligible impact on the reporting of bulk commodities (e.g., wheat, potash and coal) which represent the majority of the total number of cars and tonnes. However, the reporting of manufactured and miscellaneous goods has changed significantly.

Details of the commodities included in each SCTG class presented in **Railway Carloadings (Monthly)** are available upon request. For further information, please contact Transportation Statistics, Statistics Canada, Ottawa, Ontario, K1A 0T6 (tel.: 1-866-500-8400, Internet: *TransportationStatistics@statcan.ca.*)

<sup>1.</sup> Intermodal traffic is freight carried in containers or truck trailers that are loaded onto flat cars.

<sup>2.</sup> Non-Intermodal traffic is freight carried in bulk or loaded in box cars.

<sup>3.</sup> The Eastern and Western Divisions, for statistical purposes, are separated by an imaginary line running from Thunder Bay to Armstrong, Ontario. Freight loaded at Thunder Bay is included in the Western Division while loadings at Armstrong are reported in the Eastern Division.

Release date: February 2007

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

#### Information to access the product

#### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable, courteous, and fair manner. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on www.statcan.ca under About us > Providing services to Canadians.

#### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.
