Telecommunications industries – 2002

The data presented in this bulletin are from the Annual Survey of Telecommunications. The Bulletin presents structural and regional indicators that complement, and are used to benchmark, the current national indicators published in catalogue 56-002 XIE – Quarterly Telecommunications Statistics. The last section of the analytical section of this Bulletin provides highlights from the more recent quarterly data.

In addition to the tables provided here, special tables can be ordered on a cost recovery basis.

Introduction

The telecommunications services sector is a key component of the Information and Communications Technologies sector (ICT) as a provider of access to the network infrastructure necessary to process, transmit or receive information. The telecommunications sector is evolving in a number of ways. In 2002:

- The wireless and reseller segments of the industry were profitable for the first time;
- Strong growth in data and high speed services revenues in the wireline industry were offset by declining revenues for traditional voice services;
- The wireless segment continued to drive growth in the sector;
- Wireless access to PSTN continues to grow;
- All segments of the sector except wireless improved their debt ratios;
- Construction drove capital expenditures;
- Employment levels and labour expense decline.

Statistics Statistique Canada Canada

The next sections look at some indicators of those changes.

Wireless and reseller segments profitable for the first time

The operating profits of the sector were \$4.6 billion in 2002, 10.7% higher than in the previous year. The sector's profit margin also increased to 13.8% from 12.8% the previous year. The wireline segment experienced declining profits and profit margins over 2002. While operating profits and profit margins in the wireless, reseller and satellite and other segment improved.

Operating margins ranged from 7.3% in the reseller segment to 14.5% in the wireline segment. The reduction in the wireline operating margin and the increase in the profit margins for other segments have moved all segments towards the sector average of 13.8. In comparison, the operating margin for all industries was 7.1% in 2002, 17.3% for the finance and insurance industries and 6.1% for the non-financial sectors.¹

Revenue from traditional wireline sources being replaced by growth in non-switched services

The potential for revenue growth in the wireline industry's traditional voice services markets is limited by strong competition in the long distance market, by limitations on price increases for local services, and by the high penetration of local services. In 2002, revenues from the provision of long distance services declined 4.2% and local service revenues decreased by 4.5%. In total, revenues from voice services accounted for 64.8% of total wireline operating revenue in 2002, down from 68.1% in 1999.

Revenue from Carrier (wholesale) services also fell 19.0% in 2002 following a 3.9% decline in 2001 and a 2.5% decline in 2000. The three years of decline have resulted in wholesale carrier service revenue accounting for 13.6% of total wireline revenue, down from 18.2% in 1999.

The industry therefore had to rely on other sources of revenues for growth. The fastest growing markets for the industry in 2002 were Internet access services (223.6%), calling features (26.2%) and high speed circuit-switched services (27.1%).

The wireless segment continues to increase its importance

The wireless segment's share of the sector's revenues and employment reached 21.7% and 16.0% in 2002, up from 15.8% and 15.1% four years earlier. This trend was also observed in operating expenses (22.1% from 18.7%) and labour expenses (14.0% from 12.9%), although the increase was not as large.

The share of total operating revenues for the reseller segment fell to 2.0% in 2002, down from 3.3% in 1999. Its share of employee's fell to 2.2% in 2002 down from in 3.8% in 1999. A similar drop occurred in total operating expenses which fell to 2.1% in 2002 from 4.8% in 1999. In terms of capital expenditures, the reseller segment accounted for 0.2% in 2002, down from 2.3% in 1999.

The wireline segment also saw declines in its shares of revenues, expenses and capital expenditures, between 1999 and 2000. However, only the share of total operating revenues declined for three straight years reaching 74.3% in 2002 from 79.0% in 1999. On the other hand, the wireline segments share of total employment reached 80.3% in 2002 up from 79.5% in 1999.

^{1.} Statistics Canada, Financial and taxation statistics for enterprises, by NAICS, Annual, 2002.

Wireless access to the PSTN continues to grow

The number of access paths (in voice grade equivalents) to the PSTN² surpassed 32 million in 2002, an increase of 2.8%. Wireline access to the PSTN declined by 1.7% while wireless access increased by 11.5%. Mobile connections accounted for 36.7% of all connections to the PSTN in 2002, up from 25.9% in 1999.

While most types of fixed access to the PSTN declined between 2001 and 2002, the largest declines occurred in individual and multi-party lines. The increasing popularity of high-speed Internet and mobile communications largely explains the decline in the relative importance of individual lines as a means to connect to the network.

The wireless network is also changing. In 2002, the number of analogue subscribers declined by 14.3%, while the number of digital wireless subscribers increased by 22.2%. At the end of the year, over 77.0% of all wireless subscribers were digital up from 37.5% in 1999.

The telecommunications sector improved its financial position

The debt ratio for the telecommunications sector decreased from 70.2% in 2001 to 67.1% in 2002. This trend was observed in all segments except the wireless segment. The debt ratio went from 69.2% to 64.6% in the wireline segment, from 123.2% to 108.9% in the reseller segment, from 72.9% to 66.4% in the satellite and other segment and from 71.6% to 79.8% in the wireless segment.

In 2002, the value assets in the telecommunications sector fell 2.1% to \$68.7 billion, while total liabilities declined 6.4% to \$46.1 billion. A decrease in long-term liabilities was the driving factor behind the debt reduction.

Construction investment drove capital expenditures in 2002

Investments by the telecommunications in 2002 were \$6.5 billion, a decrease of 18.0% over the previous year. This decrease followed two years of increases, 8.2% in 2001 and 23.1% in 2000. Between 2000 and 2002, investments by this sector totalled \$21.9 billion. This represents \$1.68 of investments per dollar of operating profits generated by the sector during that period and 23.0% of its operating revenues.

The wireline segment decreased total investment by 20.6%. The 34.9% decrease in machinery and equipment more than offset the 22.9% increase in construction.

On the other hand, total investment in the wireless segment increased by 2.0% in 2002, driven by the 123.7% increase in construction investment. This in turn caused the share of total investments going into the wireless network to increase in 2002. That share went from 23.8% in 2001 to 29.6% in 2002.

The telecommunications sector had declining employment and labour costs

The number of persons working in the industry fell 5.7% to 91,769 in 2002. Part-time workers represented 11.7% of the sectors workforce compared to 12.8% in 2001, 13.8% in 2000 and 13.4% in 1999. This decrease in part-time employment combined with a loss of 4.6% in full time employment resulted into an overall decrease of 5.4% in the full-time equivalent (FTE) workforce level.

Average labour costs per FTE employee increased by 7.4% to \$71,980 per employee for the telecommunications industry, driven by an increase 6.0% to \$73,743 in the wireline segment and a 20.2% increase to \$65,299 in the wireless segment.

The number of access paths to the public switched telephone network (PSTN) provides an indication of the level of connectivity of Canadian households, businesses and institutions. A broader measure of connectivity would include Internet access.

Labour expenses as a share of total operating expenses in the telecommunications sector remained around 21.7%. The wireline segments share fell marginally to 24.3% from 24.5% while the wireless segment's share increase to 13.8% from 12.6%. The labour expense share for the reseller and satellite and other telecommunications segments also fell, 16.5% from 17.4% for resellers; and 16.4% from 18.3% for the satellite and other telecommunications segment.

The financial performance of telecommunications operators varied by province

In 2002, operating revenues increased at a rate above the 2.5% national average in Newfoundland and Labrador, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia. Nova Scotia, New Brunswick, and Ontario all experienced declining operating revenues, with Ontario experiencing the largest absolute decline.

The 4.6 point increase of the operating profit margin (10.6% in 2002 compared to 6.0% in 2001) generated by Ontario operations was the largest of any province. The upturn can be attributed to the 6.3% reduction of operating expenses. Despite the improvement, Ontario's operating profit margin remained below the national average of 13.8%. Alberta experienced the largest decline in profit margin, going from 23.4% in 2001 to 6.4% in 2002.

Nationally, labour costs rose by 1.5% and the largest increases were experienced in Saskatchewan (14.5%) and Manitoba (10.4%). Total employment in the telecommunication sector decreased by 5.7%, with all provinces except Manitoba contributing to this trend.

Labour costs as a percent of operating revenue fell marginally to 18.7% in 2002 from 18.8% in 2001. The largest decline occurred in Newfoundland and Labrador to 14.7% from 17.1%. The next largest decline occurred in Quebec which reduced this ratio to 16.1% from 17.1%. At the other end of the spectrum, Saskatchewan increased its ratio to 29.0% from 26.2%, followed by New Brunswick which increased its ratio to 19.6% from 18.6%.

Recent trends

Operating profits in the telecommunications sector increased 23.0% in 2003 over 2002. This increase occurred even though operating revenue decreased slightly by 0.4% because operating expenses decreased by 4.2%. The wireless sector continued to drive the increased profitability as operating profits were 54.6% higher in 2003 than 2002.

The decline in wireline connections to the PSTN first experienced in 2002, continued in 2003 with a 1.3% decrease. The number of wireless subscribers continued its upward trend, increasing by 11.5% in 2003. Wireless subscribers continue towards digitization with over 84.0% of all wireless subscribers being digital at the end of 2003, up from around 77.0% at the end of 2002. This increase in wireless subscribers resulted in an increase in total teledensity to 104.6 access paths per 100 persons.

In 2003, investments in the telecommunications industry decreased by 14.9%. The decline would have been larger if not for the increase of 16.3% in the fourth quarter 2003 over the fourth quarter 2002. This was the first quarter over quarter increase since fourth quarter 2001.

Statistics Canada publishes updated information on this sector on a quarterly basis in the Daily (<u>www.statcan.ca</u>). Detailed results are presented in publication 56-002 XIE – Quarterly Telecommunications Statistics.

History of Survey

The Telecommunications Industry (NAICS 517) is playing a critical role in the social and economic development of Canada. Clearly, its influence is expanding as Canadians increase their use of new products and services employing telecommunications applications, such as electronic media, e-commerce and mobile communications.

Significant technological innovations and deregulation in recent years led to the introduction of many new services and service providers necessitating changes to the 'Telephone survey', designed in 1971. The Annual Survey of Telecommunications Service Providers was introduced in 1997 in response to these changes. The new survey focuses on providing meaningful measures of the telecommunications industry's financial performance as well as aspects of the industry's network infrastructure. In addition, statistical changes such as the introduction of the North American Industry Classification System (NAICS) and the need to harmonise the redesigned annual survey with a new quarterly survey has had an impact on the nature of the data collected.

About the data

The data supplied by industry respondents relates to their financial and operating systems and are of good accounting quality. In instances where respondents were unable to provide the requested data, tax records were consulted to complete missing data. Where this was not possible, data was imputed based upon: data provided by the respondent relating to the missing data, their previous reports, reports from respondents that had similar operating profiles to those firms with missing data, or a combination of the above. Imputation was required for some smaller sized respondents whose operations had a limited impact on aggregate results, or for larger firms to provide missing secondary detail (subsets of higher level data). Data sets that consisted of a high level of imputed data points have not been published.

Vol. 34, no. 1

Annual data published for 1996 or earlier is not always comparable to data collected for the 1997 and subsequent reporting periods due to changes in the survey introduced in 1997. Infrastructure relating to access lines and wireless subscribers is comparable across survey periods however.

A complete description of the survey's underlying concepts and methodology is available on Statistics Canada's web site (<u>www.statcan.ca</u>) under Statistical methods / Surveys / Annual Survey of Telecommunications.

For more information

In addition to the information provided in this publication, special tables and analytical services are available on a cost recovery basis from the Telecommunications Section; Science, Innovation and Electronic Information Division. For further information, contact Advisory Services Division at 1 800 263-1136; Facsimile 1 877 287-4369; infostats@statcan.ca.

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1 800 263-1136.
