Friday, September 6, 1996

OVERVIEW

Economic growth rises in second quarter

Real gross domestic product rose 0.3% in the second quarter of 1996, as the trade surplus reached an 11-year high and businesses undertook a substantial inventory liquidation.

◆ Second quarter sees current account surplus

For the first time since the fourth quarter of 1984, Canada generated a seasonally adjusted current account surplus in the second quarter of 1996.

♦ Gross domestic product unchanged in

Economic growth halted in June after advancing the previous two months.

♦ Housing sector closer to recovery

The housing sector took another step toward recovery in July, as the value of residential building permits rose for the third straight month.

Fewer help-wanted ads across most regions

In August, the number of help-wanted ads declined in all regions except British Columbia.

Economic growth rises in second quarter

eal gross domestic product rose 0.3% in the second quarter of 1996, as the trade surplus reached an 11-year high (\$7.4 billion) and businesses undertook a substantial liquidation in non-farm inventories (\$4.8 billion).

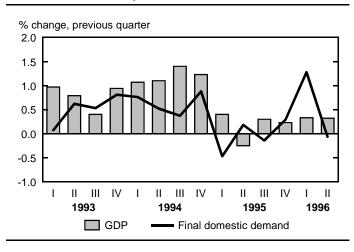

A 2.0% increase in merchandise exports, combined with a 1.2% drop in imports, translated into a merchandise trade surplus of \$17.0 billion, an 11-year high. The increase in exports was consistent with continued strength in the U.S. economy, while a drop in merchandise imports coincided with lower investment in machinery and equipment, and flat consumer spending.

The substantial liquidation of non-farm inventories in the second quarter came after 10 consecutive quarters of accumulation. In the trade category, reductions occurred mainly in wholesale trade, building materials and motor vehicles. The decline in the manufacturing industries was spread among raw materials, finished goods and goods purchased for resale.

Business investment declined during the second quarter, reversing its strong growth in the previous two quarters. The turnaround was due mostly to a 3.4% fall in machinery and equipment investment. Non-residential construction fell for the sixth straight quarter, pulled down by engineering construction. On the positive

(continued on page 2)

GDP and FDD at 1986 prices

... Economic growth rises in second quarter

side, the recovery in residential construction investment, which started last summer, accelerated. This, in turn, prompted a rise in household mortgage borrowing.

Growth in real personal expenditure declined markedly, from 1.3% in the first quarter to 0.1% in the second, reflecting reduced spending on new trucks and vans, furniture, household appliances, motor fuels and meals at restaurants. Spending on financial services increased, but at a slower pace.

A drop in business financing was in line with the decrease in business investment and inventories. As in the first quarter, share issues were the major external source of funding for corporations.

Government borrowing declined sharply, reflecting both deficit reduction and the liquidation of financial assets built up in the previous quarter. The federal government took advantage of falling interest rates by raising funds through bond issues, which offset a reduction in short-term debt.

Over the last three years, government revenues have been rising much faster than outlays. Expenditures were down in the second quarter (-0.5%), while revenues rose 0.8%. The total government deficit was \$20.9 billion, compared with the all-time peak of \$58.5 billion in the second quarter of 1993.

Available on CANSIM: matrices 701-726, 728-744, 748-750, 1791, 1792, 6701, 6702, 6704-6707, 6709-6716, 6718, 6720-6722, 6724-6727, 6729-6736, 6738, 6740, 6828-6839, 7404-7408, 7433 and 7434.

The second quarter 1996 issue of National economic and financial accounts, quarterly estimates (13-001-XPB, \$42/\$140) will be available shortly. For further information, contact the information officer (613-951-3640), National Accounts and Environment Division.

Second quarter sees current account surplus

To the first time since the fourth quarter of 1984, Canada generated a seasonally adjusted current account surplus in the second quarter of 1996: it earned \$1.1 billion more than it spent on goods, services, investment income and transfers from abroad. This surplus followed a string of deficits that have been progressively narrowing since the fourth quarter of 1993, largely as a result of a growing surplus on goods. In financial terms, a current account surplus means that the country invested more capital abroad than it received from foreign markets.

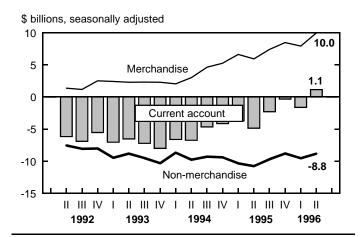

Canada's surplus on goods climbed to an all-time high of almost \$10 billion, \$1.5 billion above the previous record set only two quarters ago. The increase reflected a combination of higher exports and lower imports. Surpluses increased with the United States and Japan; deficits widened with the European Union and all other countries.

Due to lower deficits on investment income and on services, the deficit on non-merchandise transactions declined to \$8.8 billion, remaining within the moderate range observed over the previous two quarters. Within the services category, the usual deficit on travel narrowed, as Canadian travellers spent less abroad and foreign visitors continued to increase their outlays in Canada.

Canadians purchased \$2.7 billion of foreign stocks, in line with large net investments observed since 1990. On a smaller scale, they have been reducing their holdings of foreign bonds over the last three quarters, selling off \$0.9 billion in the second quarter. With lower short-term interest rates in Canada, Canadians also increased their holdings of foreign short-term securities and deposits by \$3.0 billion, after selling a similar amount in the previous quarter.

Meanwhile, foreign residents bought a further \$4.5 billion in Canadian stocks, bringing their net investment so far this year to \$6.2 billion. This contrasted with their net withdrawal from that

Current account balance

market in 1995, but was more in line with the three preceding years of significant investment in Canada. Over 40% of the 1996 investment was channelled into new issues, with the balance invested in outstanding issues. The price of Canadian stocks reached a record level.

Foreigners withdrew a total of \$7.4 billion in Canadian short-term paper but still invested \$5.5 billion in Canadian bonds, both largely involving federal debt instruments. Canadian short-term interest rates during the second quarter were below their U.S. counterparts, an unusual occurrence in the last two decades. In the longer-term market, Canadian rates remained higher than those in the United States, but the differential in favour of investment in Canada narrowed to its lowest level in two years.

Available on CANSIM: matrices 1364, 1370, 2325-2329, 2331-2339, 2343-2349, 2353-2355 and 2357.

Canada's balance of international payments (67-001-XPB, \$36/\$120) will be available shortly. For further information, contact Lucie Laliberté (613-951-9055), Balance of Payments Division.

Gross domestic product unchanged in June

conomic growth halted in June after advancing the previous two months. Gross domestic product (GDP) at factor cost was unchanged in June after increasing 0.5% in April and 0.2% in May. A cutback in manufacturing production and declines in public administration and transportation and storage services were mainly responsible for June's result.

Manufacturing production receded 0.6% in June, reaching its lowest level in the second quarter of 1996. June's weakness was fairly widespread, with production dropping in 12 of the 21 major groups. Manufacturers continued to liquidate inventories of finished goods to meet demand. Producers of electrical and electronic equipment, transportation equipment, and primary metals and metal-fabricated products were among the ones that reduced output the most. Higher production by manufacturers of food and industrial machinery, as well as chemicals and paper and allied products moderated the decline in manufacturing.

Transportation and storage services dropped 0.8% in June, a third consecutive decline. The decrease mainly reflected lower activity in railway transport, where carloadings of grain were particularly weak.

Output in the mining sector rose 1.9% after gaining 1.6% in May. Drilling activity increased sharply, after being disrupted in April and May by a prolonged spring thaw. Production of natural gas fell, but remained significantly above its levels earlier in the year.

Construction rose 0.9%, led by another increase in home building. Residential construction jumped 5.6%. Construction of single dwellings rose strongly throughout the quarter. Elsewhere in construction, activity on non-residential buildings and engineering projects slowed in June.

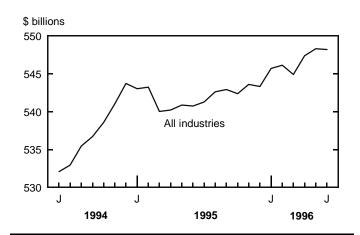

Retail activity improved for just the second time this year. Retailers enjoyed a 0.6% advance in sales, enough to offset losses in the previous two months. Sales by motor vehicle dealers and general merchandise stores increased the most, but retailers of clothing also recorded higher sales. Spending on

Note to readers

Gross domestic product (GDP) of an industry is the value added by labour and capital in transforming inputs purchased from other industries into outputs.

Monthly GDP by industry is valued at 1986 prices. All data are seasonally adjusted at annual rates.

Gross domestic product at factor cost

furniture and appliances, however, posted its second decline in the last three months.

Wholesale activity inched up 0.1% after being a major contributor to overall growth for several months. Sales increased in 6 of the 11 trade groups as sales by wholesalers of miscellaneous products increased sharply.

Available on CANSIM: matrices 4670-4674.

The June 1996 issue of Gross domestic product by industry (15-001-XPB, \$14/\$140) is now available. For further information, contact Michel Girard (613-951-9145), Industry Measures and Analysis Division. (See also "Current trends" on page 7.)

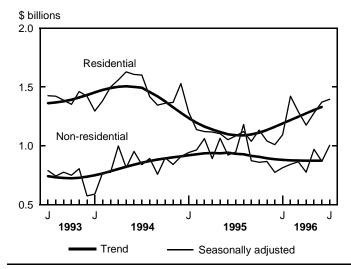

Housing sector closer to recovery

he housing sector took another step toward recovery in July, as the value of residential building permits rose for the third straight month (+1.8% from June to \$1.4 billion). Lower mortgage rates and low prices led to stronger demand for new homes. The jump in residential plans, which occurred for both single- and multi-family dwellings, coincided with substantial increases in industrial and institutional permits. The value of non-residential permits rose 15.6% to \$1.0 billion, the highest level in a year.

Overall, municipalities issued a total of \$2.4 billion in building permits in July, up 7.1% from June, and the highest value since December 1994.

Construction plans for multi-family dwellings rose 3.8% to \$458 million in July, leading the increase in new housing. Single-family construction intentions rose 0.8% to \$937 million, just short of the 1996 peak of \$938 million reached in February.

Value of building permits

(continued on page 4)

... Housing sector closer to recovery

Although the increase over June was only marginal, the single-family component, which represents more than 70% of the total residential sector, has been firming up since the middle of 1995.

Over the first seven months of 1996, the value of residential permits was up 14.3% compared with the same period last year. Canada Mortgage and Housing Corporation has reported that between January and July of 1996, housing starts rose 6.8% over the same period last year. This indicates potentially more growth in construction jobs.

Ontario led the resurgence in the housing sector in July, on the strength of a sharp increase in the value of multi-family dwellings. In contrast, British Columbia posted the largest decrease, mostly due to its multi-family component.

The value of non-residential building permits soared to its highest level since August 1995, as the industrial and institutional sectors posted their best showings in 1996. Their increase more than offset a 9.3% drop in commercial projects.

Quebec was the largest contributor to July's overall advance in the non-residential sector. Also notable were gains in British Columbia, Nova Scotia and Manitoba. In contrast, the most significant decreases were recorded in New Brunswick and Ontario.

Note to readers

The Building and Demolitions Permits Survey covers 2,400 municipalities each month, representing 93% of the population. It provides an early indication of building activity. The communities representing the other 7% of the population are very small, and their levels of building activity have little impact on the total.

The value of planned construction activities shown in this release excludes engineering projects (waterworks, sewers, culverts, etc.) and land.

Unless otherwise stated, all data are seasonally adjusted. The annual rate is a monthly figure that has been seasonally adjusted and multiplied by 12 to reflect annual levels.

Available on CANSIM: matrices 80 (levels 3-7, 16-22, 24-32), 129, 137, 443, 989-992, 994, 995 and 4073.

The July 1996 issue of **Building permits** (paper version: 64-001-XPB, \$24/240; microfiche version: 64-001-XMB, \$25/\$135) will be available shortly. For further information, contact Joanne Bureau (613-951-9689), Investment and Capital Stock Division.

Fewer help-wanted ads across most regions

In August, the number of help-wanted ads in newspapers, as measured by the help-wanted index, dropped 2% to 87. Declines were recorded in all regions except British Columbia, where the index was unchanged from July. The number of ads peaked in November 1994 at 100, and declined 13% to reach 87 in March 1996. From April 1996 through July, the index grew 2% to 89.

In the Atlantic provinces, the index declined for the third consecutive month, this time by 1% to 100, its lowest level since October 1994. Newfoundland posted a second consecutive monthly drop, while New Brunswick recorded its third straight fall. Prince Edward Island countered the trend and registered an increase of 2% to 138.

Note to readers

The help-wanted index is compiled from the number of help-wanted ads published in 22 newspapers in 20 metropolitan areas. The index is a measure of the intention of companies to hire new workers. These indexes have been seasonally adjusted and smoothed to ease month-to-month comparisons.

In August, a new smoothing technique has been introduced.

In Quebec, the index declined 2% to stand at 87, returning to its May 1996 level.

After two consecutive months of growth, Ontario slipped 2% to 91 in August.

(continued on page 5)

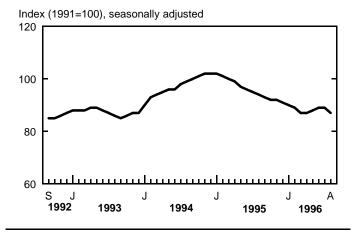

... Fewer help-wanted ads across most regions

Help-wanted index, August 1996 (1991=100) Seasonally adjusted

	Level	% change, previous year	% change, previous month
Canada	87	-7	-2
Atlantic provinces	100	-2	-1
Quebec	87	-11	-2
Ontario	91	-9	-2
Prairie provinces	94	8	-1
British Columbia	64	-12	0

In the Prairies, the index recorded a drop of 1% to 94 after four straight monthly increases. Alberta, after rising for the last five months, registered a decline of 1%. Saskatchewan recorded its fifth advance in a row, this month by 2%, bringing its total increase since January 1996 to 13%. In Manitoba, the number of ads was unchanged at 105.

New from Statistics Canada

Perspectives on labour and income

Autumn 1996

The Autumn 1996 issue of *Perspectives on labour and income* features two articles on work absences. One looks at trends in prolonged absences due to illness or accident, and at sources of compensation; the other examines 1995 work absence rates for full-time paid workers by industry, occupation, province, age and sex. The "Key labour and income facts" section presents additional charts and analysis on the topic.

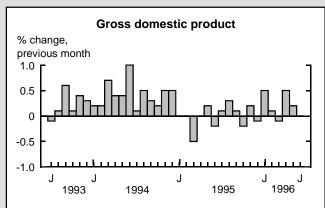

Other articles in this issue explore the gambling industry and its role in job creation and revenue growth, trends in transfer payments to families with children, the growth of dual-pensioner families, and the health of Canadian workers aged 50 to 64 compared with that of workers in their 30s. A mid-year review of developments in the labour market is also included.

Each quarter, *Perspectives* draws on many data sources for insights on emerging income issues, and reviews recent developments in the labour market.

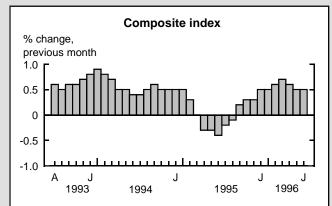

The Autumn 1996 issue of **Perspectives on labour and income** (75-001-XPE, \$17/\$56) is now available. For further information on this release, contact Jeffrey Smith (613-951-

6894) or Jeannine Usalcas (613-951-4628), Labour and Household Surveys Analysis Division.

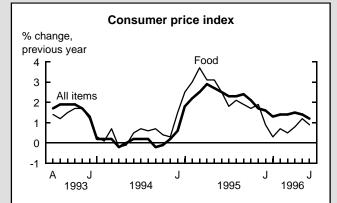

Current trends

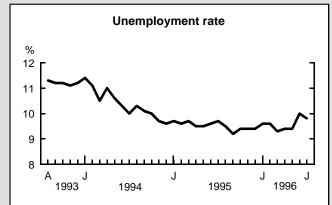

Real gross domestic product at factor cost was unchanged in June.

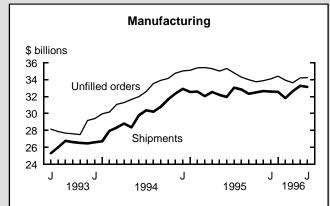

The composite index grew by 0.5% between June and July.

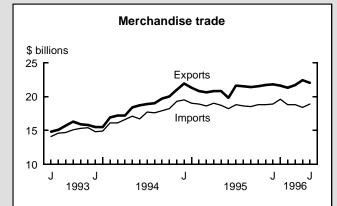

Consumers paid 1.2% more for goods and services in July 1996 than the year before. Food prices rose by 0.9%.

In July, the unemployment rate fell to 9.8%.

Manufacturers' shipments slipped 0.4% in June to \$33.1 billion. The level of unfilled orders rose 0.1% to \$34.2 billion.

In June, the value of merchandise exports fell 1.8% from May to \$22.0 billion. Imports advanced 2.3% to \$18.9 billion.

Note: All series are seasonally adjusted except the consumer price index.
