Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this publication and related statistics or services should be directed to: Information and Current Analysis Unit, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-9606) or to the Statistics Canada Regional Reference Centre in:

Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691
Winnipeg	(204) 983-4020		

You can also visit our World Wide Web site:

Ordering/Subscription information

All prices exclude sales tax

Catalogue no. 62-010-XPB, is published monthly in a **paper version** for \$25.00 per issue or \$83.00 for four issues in Canada. Outside Canada the cost is US\$25.00 per issue and US\$83.00 for four issues.

Please send orders to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6 or by dialling **(613) 951-7277** or **1 800 700-1033**, by fax **(613) 951-1584** or **1 800 889-9734** or by Internet: order@statcan.ca. For change of address, please provide both old and new addresses. Statistics Canada publications may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinaire et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à : Sous-section de l'information et de l'analyse courante, Division des prix, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone : (613) 951-9606) ou à l'un des centres de consultation régionaux de Statistique Canada :

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero
- amount too small to be expressed
- p preliminary figures
- r revised figures
- x confidential to meet secrecy requirements of the Statistics Act

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles
- ... n'ayant pas lieu de figurer
- néant ou zéro
- nombres infimes
- p nombres provisoires
- r nombres rectifiés
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret

NOTE ON CANSIM

Most of the data published in *The Consumer Price Index* (Catalogue 62-001) and *Consumer Prices and Price Indexes* (Catalogue 62-010) is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. For further information on CANSIM call (613) 951-8200 or write to Electronic Data Marketing Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans *L'indice des prix à la consommation* (n° 62-001 au catalogue) et *Prix à la consommation et indices des prix* (n° 62-010 au catalogue) peuvent être obtenues, sous forme lisible par machine, de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à Division du marketing, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Announcement

Several changes will be made to the Consumer Price Index (CPI) starting with the January 1998 data to be released on February 27, 1998.

- 1) The time base used to present the CPI will be updated from 1986=100 to 1992=100. As discussed in the article "Changing the CPI to a New Official Time Base (1992=100)" which appears in this issue, Statistics Canada is moving all its price indexes and constant dollar series to the 1992 time base. The article discusses the method for converting time bases in the CPI and the implications of doing so.
- 2) The basket of goods and services used to calculate the CPI will be updated to reflect changes in consumer spending patterns. Expenditure patterns for 1996 will replace those for 1992.
- 3) Minor modifications will be made to the commodity classification system. Most notably, the aggregate "purchase and rental of automotive vehicles" will change.

For further information, please contact your regional Statistics Canada Office or contact Prices Division

Facsimile: (613) 951-2848
e-mail: shadsan@statcan.ca.

Annonce

Plusieurs changements seront apportés à l'indice des prix à la consommation (IPC) avec la publication des données de janvier 1998, qui seront diffusées le 27 février 1998.

- 1) La période de base 1986=100 utilisée pour la présentation de l'IPC deviendra 1992=100. Comme on peut le voir dans l'article «Vers une nouvelle période de base officielle pour l'IPC (1992=100)» qui paraît dans cette édition, Statistique Canada s'appête à adopter la période de base 1992=100 pour toutes ses séries d'indices de prix et ses séries en dollars constants. L'article présente la méthode de conversion des périodes de base dans l'IPC et les implications de cette conversion.
- 2) Le panier des biens et services utilisés pour le calcul de l'IPC sera mis à jour pour tenir compte de l'évolution des régimes de dépenses de consommation. Les régimes de dépenses de 1996 remplaceront ceux de 1992.
- 3) Des modifications mineures seront apportées au système de classification des produits. Plus particulièrement, l'agrégat «achat et location de véhicules automobiles» changera.

Highlights

Consumer Price Behaviour

Second Quarter, 1997

Trends in Consumer Price Movements

Consumer prices did not rise as rapidly between March and June 1997 as they had in the previous two quarters. The second quarter increase of 0.3% was smaller than the advances of 0.7% in the last quarter of 1996 and 0.6% in the first quarter of 1997. When seasonal effects were excluded, the CPI rose by 0.1% in the second quarter. This was preceded by increases of 0.9% and 0.3% in the fourth quarter of 1996 and the first quarter of 1997.

Consumer prices did not change overall between March and April, and then advanced 0.1% in May and 0.2% in June. In seasonally adjusted terms, prices fell by 0.1% in April and rose by 0.1% in each of May and June.

Increases in the CPI from the same month of the previous year were 1.7%, 1.5% and 1.8% in April, May and June.

Contributions by selected major components (not seasonally adjusted)

Price increases for travelling accommodation, food, cigarettes, alcoholic beverages, and health and personal care were sources of upward pressures on the CPI in the second quarter of 1997. These were moderated by declines in shelter charges and lower prices for clothing and for household operations and furnishings. Several offsetting price movements within the transportation component caused it to remain unchanged in the second quarter.

Over the second quarter, travelling accommodation charges advanced by 23.5%. Most of the rise occurred in May (8.3%) and June (12.0%) as facilities moved toward their peak summer rates. In the past, prices for this service were collected in May and July and no price movement was reflected between May and June. Because this component has shown large seasonal movements in recent years, a decision was made to collect prices in June as well.

Prices of food bought from stores and from restaurants each rose, on average, by 0.5% in the latest quarter. In the case of food purchased from grocery stores, higher meat prices played an important role as chicken, beef and pork prices all advanced. Other price increases were noted for fresh fruit, fresh vegetables, breakfast cereal and coffee. At the same time, bakery products and soft drinks declined in price.

Cigarette prices moved up by 1.6% in the second quarter with most of the increases observed in May. That was primarily due to a rise in the specific tax on this commodity in Québec. Prices of alcoholic beverages rose by 0.5% on average in the second quarter. Higher prices for beer accounted for most of the increase.

A rise in health care service charges was mainly due to increases in dental care rates. These generally advance in April of each year. Price increases for personal care supplies and services were also noted.

Within the Shelter index there were several offsetting price movements. On one hand, charges for mortgage loans, natural gas and fuel oil all declined. On the other hand, consumers paid higher repair and maintenance charges, rental accommodation rates, new house purchase prices and electricity charges. Overall, the Shelter index fell 0.2%.

Clothing prices fell over the quarter. Prices of women's wear tend to drop fairly sharply in May while those of men's wear tend to decline in June as spring sales take effect. The drop in clothing prices this quarter was less than is normal in the springtime. A price reduction for household textiles and lower charges for horticultural products were largely responsible for a decline in the index for household operations and furnishings.

The Transportation index remained unchanged in the second quarter. Charges for air travel and auto insurance declined a

Faits saillants

Comportement des prix à la consommation

Deuxième trimestre de 1997

Tendances des mouvements des prix à la consommation

Les prix à la consommation n'ont pas progressé aussi rapidement entre mars et juin 1997 qu'aux deux trimestres précédents. L'augmentation de 0,3% au deuxième trimestre a été plus faible que les gains de 0,7% du dernier trimestre de 1996 et de 0,6% du premier trimestre de 1997. Correction faite des effets saisonniers, l'IPC a gagné 0,1% au deuxième trimestre. Ce gain a été précédé de hausses de 0,9% et de 0,3% au quatrième trimestre de 1996 et au premier trimestre de 1997.

Les prix à la consommation, n'ont pas changé entre mars et avril, ont augmenté de 0,1% en mai, puis de 0,2% en juin. En chiffres désaisonnalisés, les prix ont fléchi de 0,1% en avril et ont monté de 0,1% en mai et en juin.

Les progressions de l'IPC par rapport au mois correspondant de l'année précédente ont été de 1,7%, 1,5% et 1,8% en avril, en mai et en juin.

Contribution de certaines composantes principales (non désaisonnalisées)

Les augmentations de prix de l'hébergement pour voyageurs, des aliments, des cigarettes, des boissons alcoolisées et de la santé et des soins personnels ont eu un effet d'entraînement sur l'IPC au deuxième trimestre de 1997. Elles ont été tempérées par des baisses de frais de logement et une diminution des prix de l'habillement et des dépenses et de l'équipement du ménage. Plusieurs mouvements de prix compensatoires dans la composante des transports ont maintenu cette dernière au même niveau au deuxième trimestre.

Au cours du deuxième trimestre, les frais d'hébergement pour voyageurs ont connu une progression de 23,5%. Le gros de l'augmentation a eu lieu en mai (8,3%) et en juin (12,0%) à la faveur de l'application progressive des tarifs de pointe d'été dans les établissements. Par le passé, les prix pour ce service étaient observés en mai et en juillet, et on ne reflétait pas de mouvement de prix entre mai et juin. Parce que cette composante a affiché d'importants mouvements saisonniers ces dernières années, il a été décidé de relever les prix en juin également.

Les prix des aliments achetés au magasin et au restaurant ont augmenté dans les deux cas, en moyenne, de 0,5% au dernier trimestre. Dans le cas des aliments achetés à l'épicerie, la hausse du prix des viandes, c'est-à-dire du poulet, du boeuf et du porc, a joué un rôle important. On a observé d'autres augmentations de prix pour les fruits frais, les légumes frais, les céréales de table et le café. En même temps, les produits de boulangerie et les boissons gazeuses ont baissé de prix.

Le prix des cigarettes a augmenté de 1,6% au deuxième trimestre, le gros des augmentations étant observées en mai. Cela vient d'abord et avant tout d'une augmentation de la taxe spécifique sur ce produit au Québec. Le prix des boissons alcoolisées a monté de 0,5%, en moyenne, au deuxième trimestre. L'augmentation du prix de la bière explique le gros de l'augmentation.

La hausse des frais de soins de santé est essentiellement le fait de majorations des tarifs de soins dentaires. Ces tarifs augmentent généralement en avril de chaque année. On a également noté des augmentations de prix des articles et services de soins personnels.

Dans l'indice du logement, il y a eu plusieurs mouvements de prix compensatoires. D'une part, les frais pour les prêts hypothécaires, le gaz naturel et le mazout ont tous diminué. D'autre part, les consommateurs ont payé plus cher les réparations et l'entretien, le logement en location, les maisons neuves et l'électricité. Au total, l'indice du logement a fléchi de 0,2%.

Les prix de l'habillement ont chuté au cours du trimestre. Les prix des vêtements pour femmes ont tendance à connaître une baisse subite en mai, tandis que ceux des vêtements pour hommes ont tendance à diminuer en juin, avec l'arrivée des ventes de solde du printemps. La baisse des prix de l'habillement au cours de ce trimestre a été plus faible que la normale pour le printemps. Une réduction de prix des articles ménagers en matière textile et des produits horticoles est le principal facteur d'un recul de l'indice des dépenses et de l'équipement du ménage.

L'indice des transports est demeuré inchangé au deuxième trimestre. Les tarifs des voyages aériens et le prix de l'assurance automobile ont fléchi

little, while vehicle registration charges and rail and ferry fares advanced.

Special aggregates

The Goods index fell by 0.2% in the second quarter following increases of 0.7% in the first quarter and 1.2% in the last quarter of 1996. The latest drop was associated with declines of 0.5% and 0.2% in the prices of semi-durables and durables respectively. The prices of non-durables remained unchanged.

The Services index, in contrast, advanced by 0.8% in the second quarter, preceded by less noticeable advances of 0.2% and 0.4% in the previous two quarters. Much of the increase in the second quarter was due to the sharp rise in travelling accommodation rates. The continuing declines in mortgage interest charges and lower premiums on automobile insurance premiums had a moderating effect.

The Energy index fell by 1.0% in the second quarter following a rise of 0.8% in the first quarter. Most of the weakness in the second quarter came from declines of 9.4% and 2.5% in the prices of piped natural gas and fuel oil respectively. A rise of 0.7% in electricity rates accompanied by a small 0.1% rise in gasoline prices saved the Energy index from sliding further downwards in the second quarter.

The All-items excluding Food and Energy index rose by 0.4% in the second quarter following increases of 0.6% in the previous quarter and 0.4% in the quarter before that.

Changes in Provincial Sales Taxes

Newfoundland, Nova Scotia and New Brunswick merged their provincial retail sales tax systems with the federal Good and Services Tax (GST) under the name of the "Harmonized Sales Tax" (HST). This change took effect on April 1st 1997.

The HST rate was set at 15%. The previous provincial sales tax rates for most taxable commodities were 12% in Newfoundland and 11% in Nova Scotia and New Brunswick. As these were applied to the price of the item including GST of 7%, the combined sales tax rates were 19.84% in Newfoundland and 18.77% in Nova Scotia and New Brunswick.

An important component of harmonization was establishing a common tax base. It was agreed that all commodities previously subject to the GST would be subject to the new HST. As a result, products such as basic food items which were not subject to GST or provincial sales taxes are not subject to the new HST. Commodities which were subject to both provincial sales taxes and GST are now subject to the lower HST. Items in this category include restaurant meals, telephone services, snack foods, cleaning supplies and household appliances. Items which were previously subject to the GST but not to provincial sales tax are now subject to HST. Examples of commodities in this category include fuel oil, postage and newspapers. There were differences in provincial tax bases before the harmonization. For example, Nova Scotia and New Brunswick had provisions exempting men's and women's clothing items priced under \$100 from provincial taxation while Newfoundland did not. Therefore, the impact of the tax changes on clothing is different in Newfoundland than in the other two harmonizing provinces. There are also some differences in provincial taxation after harmonization. For example, Nova Scotia is phasing in the drop in tax on vehicle purchases.

Overall, the tax changes were largely offsetting in Nova Scotia and New Brunswick. In Newfoundland, if prices had remained the same, the net result of these tax changes would have had the effect of reducing consumer prices by a little more than half a percent.

Three other provinces introduced sales tax changes in late March and early April. In Saskatchewan, the provincial sales tax rate dropped from 9% to 7%. If prices had remained the same, the direct effect of this tax reduction would have been estimated to be a reduction of approximately one percent in the All-items index for Saskatchewan. Prince Edward Island increased its tax on gasoline, and Québec increased its tax on cigarettes. These changes had very little impact on the All-items index of either province.

un peu, tandis que les frais d'immatriculation de véhicule et les tarifs des chemins de fer et des traversiers ont augmenté.

Agrégats spéciaux

L'indice des biens s'est replié de 0,2% au deuxième trimestre, après avoir gagné 0,7% au premier trimestre et 1,2% au dernier trimestre de 1996. La dernière baisse était associée à des replis de 0,5% et de 0,2% des prix des biens semi-durables et des biens durables, respectivement. Les prix des biens non durables sont demeurés inchangés.

L'indice des services, par contre, a avancé de 0,8% au deuxième trimestre, après des gains moins éclatants de 0,2% et 0,4% aux deux trimestres précédents. Une bonne part de l'augmentation du deuxième trimestre était le fait d'une hausse marquée des prix de l'hébergement pour voyageurs. Le repli ininterrompu des frais d'intérêt hypothécaire et la baisse des primes d'assurance automobile ont eu un effet de ralentissement.

L'indice de l'énergie a subi un repli de 1,0% au deuxième trimestre, après une augmentation de 0,8% premier trimestre. Le gros de la faiblesse au deuxième trimestre est venu de diminutions de 9,4% et 2,5% des prix du gaz naturel et du mazout, respectivement. Une hausse de 0,7% des tarifs d'électricité, accompagnée d'un faible gain de 0,1% du prix de l'essence, a empêché l'indice de l'énergie de glisser encore davantage au deuxième trimestre.

L'indice d'ensemble sans les aliments et l'énergie a monté de 0,4% au deuxième trimestre, après les progressions de 0,6% au trimestre précédent et de 0,4% au dernier trimestre de 1996.

Modification des régimes provinciaux de taxe de vente

Terre-Neuve, la Nouvelle-Écosse et le Nouveau-Brunswick ont fusionné leur régime provincial de taxe de vente au détail avec celui de la taxe fédérale sur les produits et service (TPS) sous l'appellation de "taxe de vente harmonisée" (TVH). Ce changement est entré en vigueur le 1^{er} avril 1997.

Le taux de la TVH a été fixé à 15%. Les taux de la taxe de vente provinciale pour la plupart des produits taxables étaient auparavant de 12% à Terre-Neuve et de 11% en Nouvelle-Écosse et au Nouveau-Brunswick. Comme ces taux étaient appliqués au prix de l'article comprenant aussi la TPS de 7%, les taux des taxes de vente combinées étaient de 19,84% à Terre-Neuve et de 18,77% en Nouvelle-Écosse et au Nouveau-Brunswick.

L'un des volets importants de l'harmonisation a été l'établissement d'une base de taxe commune. Il a été convenu que tous les produits qui étaient auparavant assujettis à la TPS seraient assujettis à la nouvelle TVH. Ainsi, des produits, comme les produits alimentaires de base, n'étaient pas assujettis à la TPS ou aux taxes de vente provinciales et ne sont pas assujettis à la nouvelle TVH. Les produits qui étaient assujettis à la fois aux taxes de vente provinciales et à la TPS sont maintenant assujettis à la TVH moins élevée. Parmi les articles dans cette catégorie, mentionnons les repas au restaurant, les services téléphoniques, les grignotines, les produits de nettoyage et les appareils ménagers. Les articles qui étaient auparavant assujettis à la TPS mais non à la taxe de vente provinciale sont maintenant assujettis à la TVH. Mentionnons, parmi les produits de cette catégorie, le mazout, les services postaux et les journaux. Avant l'harmonisation, on pouvait observer des différences dans les assiettes de taxation entre les provinces. Ainsi, il y avait en Nouvelle-Écosse et au Nouveau-Brunswick des dispositions exemptant de la taxe provinciale les articles d'habillement pour hommes et pour femmes inférieurs à \$100. Ces dispositions n'existaient pas à Terre-Neuve. Par conséquent, l'incidence des changements de taxe pour les vêtements à Terre-Neuve est différente de celle des deux autres provinces dont la taxe a été harmonisée. Après l'harmonisation, il y a aussi certaines différences de taxe provinciale. Ainsi, la Nouvelle-Écosse introduit progressivement la baisse de taxe sur les achats de véhicules.

Dans l'ensemble, le changement a eu peu d'effet en Nouvelle-Écosse et au Nouveau-Brunswick. À Terre-Neuve, si les prix étaient demeurés les mêmes, le résultat net des changements de taxe serait une baisse des prix à la consommation d'un peu plus d'un demi pour cent.

Trois autres provinces ont modifié leur régime de taxe de vente à la fin de mars et au début d'avril. En Saskatchewan, le taux de la taxe de vente provinciale a baissé de 9% à 7%. Si les prix étaient demeurés les mêmes, l'effet direct de cette réduction de la taxe aurait été équivalent à une réduction d'approximativement un pour cent de l'indice d'ensemble en Saskatchewan. L'île-du-Prince-Édouard a augmenté sa taxe sur l'essence et le Québec a augmenté sa taxe sur les cigarettes. Ces changements ont eu très peu d'effet sur l'indice d'ensemble de chaque province.

CHANGING THE CPI TO A NEW OFFICIAL TIME BASE (1992=100)

By Margaret Parlor¹ and Harold Harnarine²

Introduction

The current official time base of the Consumer Price Index (CPI) is 1986=100. This time base was first used when the CPI for June 1990 was released. Statistics Canada is about to convert all price index series to the time base 1992=100. As a result, all constant dollar series will be converted to 1992 dollars. The CPI will shift to the new time base when the CPI for January 1998 is released on February 27th, 1998.

To convert the CPI to the new time base, each existing series will be divided by a conversion factor specific to that series. The movement of a series between any two points in time is preserved, except for minor differences due to rounding. As a result, most users will have no difficulty finding the information they need using series on the new time base. In cases where users need information on other time bases, they will be able to calculate the required information by converting the series from the 1992 base to the desired time base.

At the same time as it is introducing the 1992 time base, Statistics Canada will be introducing the 1996 expenditure weights into the CPI. Changing CPI time bases and expenditure patterns are separate exercises. The introduction of new expenditure patterns into the CPI is done in a way which has no effect on indexes published prior to their introduction.

What does the CPI time base mean?

All index numbers that measure changes over time, whether price indexes or quantity indexes, must have a specified time base. The time base serves as a reference point against which all levels are compared. Without the specific reference to the time base, the index number is meaningless.

When a Consumer Price Index level is quoted, the applicable time base is always given. For instance, the All-items index for Canada for May 1997 was 137.7 (1986=100), with the information in brackets specifying the time base. Knowing that information, we are able to derive the following conclusions:

¹ Ms Parlor is the Chief of the Consumer Price Section.

² Mr. Harnarine is a Senior Economist in Prices Division.

VERS UNE NOUVELLE ANNÉE DE BASE OFFICIELLE POUR L'IPC (1992=100)

par Margaret Parlor¹ et Harold Harnarine²

Introduction

La période de base officielle de l'indice des prix à la consommation (IPC) est actuellement 1986=100. Cette période de base a été utilisée pour la première fois au moment de la diffusion des données de l'IPC pour juin 1990. Statistique Canada s'apprête à convertir toutes les séries des indices de prix à la période de base 1992=100. Par conséquent, toutes les séries en dollars constants seront aussi converties en dollars de 1992. L'IPC adoptera la nouvelle période de base lorsque paraîtront les données de l'indice pour janvier 1998 dès le 27 février 1998.

Pour convertir l'IPC à la nouvelle période de base, on divisera les chiffres des séries existantes par un facteur de conversion particulier à chaque série. Sauf pour quelques écarts négligeables attribuables à l'arrondissement, la variation d'une série entre deux points dans le temps demeurera intacte. La plupart des utilisateurs n'auront donc aucune peine à trouver les données dont ils ont besoin dans les séries sur la nouvelle période de base. Par contre, s'il leur faut des données sur une période de base antérieure, ils pourront eux-mêmes convertir la série de la période de base 1992 à la période de base souhaitée.

En même temps que la période de base 1992, Statistique Canada intégrera aussi dans l'IPC les pondérations des dépenses pour 1996. Les changements des périodes de base de l'IPC et des distributions de dépenses sont indépendants les uns des autres. L'intégration des distributions de dépenses dans l'IPC n'influe d'aucune façon sur les indices publiés avant ce moment.

Que signifie la période de base de l'IPC?

Tous les indices servant à mesurer une variation temporelle, qu'il s'agisse d'indices de prix ou d'indices de quantité, doivent se rapporter à une période de base particulière qui sert de point de référence pour comparer tous les chiffres. Sans une période de base, un indice n'aurait aucun sens.

Lorsqu'un indice des prix à la consommation est cité, il s'accompagne toujours de la période de base qui s'applique. Par exemple, l'indice d'ensemble pour le Canada de mai 1997 s'établissait à 137,7 (1986=100), l'information entre parenthèses désignant la période de base. À partir de cette information, nous pouvons alors conclure ce qui suit:

¹ Mme Parlor est chef de la section de prix à la consommation

² M. Harnarine est un économiste principal à la division des prix.

- consumer prices across Canada were, on average, 1.377 times higher in May 1997 than in 1986,
- consumer prices across Canada rose, on average, 37.7% between the year 1986 and May 1997, and
- on average, consumers across Canada had to pay \$137.70 in May 1997 for purchases that would have cost \$100.00 in 1986.

If two series are on the same time base, it is possible to compare their movements between the base period and a specific point in time. For instance, the index for All-items Canada was 137.7 (1986=100) in May 1997, while the index for food prices was 129.9 (1986=100). We can conclude from this that food prices increased more slowly than the price of the overall basket between 1986 and May 1997.

As can be seen, it is very simple to compare movements from 1986 when the time base is 1986=100. As time goes on, users become less interested in using 1986 as a benchmark, preferring instead a more recent year because they can relate more readily to their price change experience since then. This is an important factor behind the move to change official time bases.

How are time bases selected?

The CPI official time base conforms to the official time base used by other programs of Statistics Canada. The time base and the reference year for the expenditure patterns used in the CPI are, however, not identical. This is demonstrated in table 1 showing the time base and basket changes in the CPI. The CPI practice of treating changes in basket separately from changes in time bases is related to the policy of non-revision of the CPI (see box).

Other index series use the same time and weight base. Compare the practices of the CPI with the practices of revisable price series like the Industrial Product Price Index (IPPI). When the 1992 time base is introduced, 1992 expenditure patterns will also be introduced into the IPPI. The series will be recalculated back to 1992 using the new weights. The resulting movements between 1992 and 1997 may differ from those generated using the 1986 basket.

The decision to update the official Statistics Canada time base is, therefore, also a decision to update the weighting patterns of other series. The cost and disruption of carrying out this work has to be balanced with the advantages of using more current expenditure patterns and of using a more current benchmark.

- en moyenne, les prix à la consommation au Canada ont été 1,377 fois plus élevés en mai 1997 qu'en 1986,
- en moyenne, les prix à la consommation au Canada ont augmenté de 37,7% entre l'année 1986 et mai 1997,
- en moyenne, les consommateurs au Canada ont déboursé 137,70 \$ en mai 1997 pour des achats qui leur auraient coûté 100 \$ en 1986.

Si deux séries ont la même période de base, on peut comparer leurs mouvements entre la période de base et un point précis dans le temps. Par exemple, l'indice d'ensemble pour le Canada s'élevait à 137,7 (1986=100) en mai 1997, tandis que l'indice du prix des aliments atteignait 129,9 (1986=100). On peut donc conclure que le prix des aliments a augmenté plus lentement que le prix du panier global entre 1986 et mai 1997.

Comme on peut le voir, il est très simple de comparer des mouvements à partir de 1986 lorsque leur période de base est 1986=100. Avec le temps, les utilisateurs se désintéressent de l'année repère 1986, préférant recourir à une année plus récente à laquelle ils peuvent plus facilement relier les mouvements de prix qu'ils ont connus depuis cette date. C'est l'un des facteurs importants qui motivent les changements officiels de période de base.

Comment choisit-on une période de base?

La période de base officielle de l'IPC correspond à la période de base officielle qu'utilisent d'autres programmes de Statistique Canada. Toutefois, la période de base et l'année de référence des distributions de dépenses de l'IPC ne sont pas identiques. Les changements de période de base et de panier de l'IPC sont illustrés au tableau 1. Si les modifications du panier se font indépendamment des changements de période de base dans l'IPC, c'est en raison de la politique de non-révision de l'IPC (voir l'encadré).

D'autres séries d'indices utilisent la même base pour leur base temporelle et leurs coefficients de pondération. Comparons les pratiques de l'IPC à celles des séries de prix révisables, comme l'indice des prix des produits industriels (IPPI). Lorsque la période de base 1992 entrera en vigueur, on en profitera aussi pour introduire la distribution de dépenses de 1992 pour l'IPPI. On recalculera ainsi les séries jusqu'à 1992 en se servant des nouvelles pondérations. Les mouvements qui apparaîtront entre 1992 et 1997 sont susceptibles d'être différents de ceux qu'on a obtenus à l'aide du panier de 1986.

La décision de mettre à jour la période de base officielle de Statistique Canada est donc aussi une décision visant à actualiser les coefficients de pondération des autres séries. Le coût et les bouleversements que ce travail entraînent doivent être soupesés par rapport aux avantages de disposer de distributions de dépenses plus actuelles et d'une période repère plus récente.

There is no set formula for determining what years will be selected, but one trend seems clear – to update more frequently than every ten years or so as in the past. As the market for goods and services has become less stable in recent years, changing time bases more frequently makes the reference year more relevant to users.

Il n'y a aucune formule qui sert à déterminer les années qui seront choisies, mais une tendance claire semble se dégager: les mises à jour doivent survenir plus fréquemment qu'à peu près tous les dix ans comme dans le passé. Étant donné que le marché des biens et services a perdu de sa stabilité depuis quelques années, il n'en devient que plus pertinent pour les utilisateurs de changer la période de base plus souvent.

Non-revision and basket changes

The CPI is an important tool in adjusting payments such as wages and pensions. Parties to indexation agreements need to be able to rely on price movements as published. It would be very disruptive if a CPI movement was used to adjust a payment, and then the series was recalculated resulting in a different movement for the same period. To avoid this problem, statistical agencies around the world do not revise the CPI. How is this done when there is a basket change?

Consider the introduction of the 1996 consumer expenditure weights in the CPI. The expenditure information is collected in early 1997 and is processed later in the year. This basket will be introduced into the CPI in time to calculate the December 1997 to January 1998 price movement. Because the CPI is never revised, Statistics Canada will not publish new indexes for the period January 1996 to December 1997 using the 1996 weights. This would involve replacing existing published data. Instead, calculations from December 1997 onward will be made using the 1996 basket and "chained" or grafted on to calculations done on earlier baskets.

A Laspeyres fixed-basket price index is a composite index in which the basket reference period coincides with the base time of the index. The CPI is not a true Laspeyres index because the basket reference period and the time base do not coincide (see Table 1). The basket for 1996 will only be introduced into the CPI in December 1997. The CPI will not use expenditures based on the quantities and prices of 1996. Instead, the expenditures will be based on the quantities purchased in 1996 valued at the prices of December 1997.

Non-révision de l'IPC et changements de panier

L'IPC est un outil important dans le rajustement de paiements comme les salaires et les pensions. Les parties à un accord d'indexation doivent pouvoir utiliser les mouvements de prix publiés. Il serait fort inconfortable d'utiliser une variation de l'IPC pour ajuster un paiement et de se retrouver plus tard à cause d'un nouveau calcul de la série, avec une variation différente pour la même période. Pour éviter ce problème, les organismes statistiques dans le monde ne révisent jamais l'IPC. Comment fait-on alors lorsqu'il y a un changement de panier?

Prenons le cas des pondérations des dépenses de consommation de 1996 qui s'appliqueront à l'IPC. Les données sur les dépenses ont été recueillies au début de 1997 pour être traitées plus tard dans l'année. Ce panier sera intégré à l'IPC à temps pour établir le mouvement des prix entre décembre 1997 et janvier 1998. Étant donné que l'IPC ne subit jamais de révision, Statistique Canada ne publiera pas de nouveaux indices pour la période située entre janvier 1996 et décembre 1997 en se basant sur les pondérations de 1996, puisqu'il lui faudrait remplacer les données déjà parues. À la place, Statistique Canada calculera les indices à partir de Décembre 1997 en se servant du panier de 1996, puis les enchaînera ou les greffera aux calculs effectués sur les paniers précédents.

Un indice de prix à panier fixe de Laspeyres est un indice composite dont la période de référence du panier coïncide avec la période de base temporelle de l'indice. L'IPC n'est pas un véritable indice de Laspeyres, car la période de référence du panier et la période de base temporelle ne sont pas identiques. Le panier pour 1996 sera utilisé dans l'IPC uniquement en décembre 1997. L'IPC n'utilisera pas les dépenses calculées d'après les quantités et les prix de 1996. Les dépenses reposeront plutôt sur les quantités achetées en 1996 mais calculées aux prix de décembre 1997.

Converting monthly indexes to a new time base³

Conversion d'indices mensuels à une nouvelle période de base³

Note: It is the policy of Statistics Canada to publish all CPI indexes rounded to one decimal place.

Nota: Statistique Canada a comme politique de publier tous les indices de l'IPC à une décimale près.

³ This topic is discussed in more detail in the Consumer Price Index Reference Paper, Catalogue No. 62-553, Chapter 7.1.

³ Ce sujet est décrit de manière plus détaillée dans le document de référence de l'indice des prix à la consommation, catalogue n° 62-553, chapitre 7,1.

A monthly series can be rebased to any month or combination of months simply by dividing the original series by a conversion factor.

To convert the CPI from the 1986 to the 1992 time base, the conversion factor is based on the 1992 annual average for the series. For All-items Canada, the 1992 annual average was 128.1 (1986=100). To convert any of the monthly indexes in that series, multiply that index by 100/128.1, which is equivalent to dividing by 1.281. For example, the index for May 1997 was 137.7 (1986=100). On the 1992 time base, the index becomes $137.7/1.281=107.5$.

To convert a series to a particular month, simply divide the series by the index for that month and multiply by 100. To convert to a period of more than one month, you simply find the average for the period, then divide by this average and multiply by 100. For instance, the U.S. CPI is currently on a time base 1982-84=100. Canadian CPI series can be converted to that time base by adding the monthly indexes for the period, dividing by 36, and rounding.

When the official time base is changed, the entire history of each series is rebased using this method. Thus, for example, the 1992 All-items based series for Canada will start in January 1914, while those for the provinces will start in September 1978.

Converting annual indexes to a new time base

This type of arithmetic conversion of time bases applies to monthly indexes only. The annual average for a series on a new official time base is not obtained directly by applying the series' conversion factor. Instead, the monthly series is converted to the new time base and then the annual average is calculated as the average of the twelve monthly indexes of the calendar year.

In a few series, the rebased monthly indexes for 1992 average to 99.9 or 100.1 rather than to 100.0. This anomaly is due strictly to the low level of precision used in the CPI. Rather than increase the precision of the numbers, Statistics Canada has decided to leave the monthly indexes as calculated and display the annual average as 100.0.

The effect of time rebasing on price movements

In theory, price movements between any two points in time should be the same regardless of the time base used. In practice, differences do result because of rounding. The

On peut mettre une série mensuelle sur une nouvelle base correspondant à n'importe quel mois ou combinaison de mois simplement en divisant la série initiale par un facteur de conversion particulier à cette série.

Pour changer de 1986 à 1992 la période de base de l'IPC, le facteur de conversion s'appuie sur la moyenne annuelle de cette série pour 1992. Pour l'indice d'ensemble du Canada, la moyenne annuelle pour 1992 s'établissait à 128,1 (1986=100). Pour convertir un indice mensuel de cette série, il faut multiplier l'indice par 100/128,1, ce qui revient à le diviser par 1,281. Par exemple, l'indice pour mai 1997 s'élevait à 137,7 (1986=100). Sur la base de 1992, cet indice serait égal à $137,7/1,281=107,5$.

Pour convertir une série à un mois donné, on a qu'à diviser la série par l'indice de ce mois et à multiplier par 100. Pour procéder à une conversion lorsque plus d'un mois est en cause, on calcule la moyenne de cette période, puis on divise la série par cette moyenne et on multiplie par 100. Par exemple, l'IPC aux États-Unis est actuellement sur la base de 1982-1984=100. On peut convertir les séries de l'IPC au Canada à cette période de base. On obtient le facteur de conversion de chaque série en faisant la somme des indices mensuels de cette période, en divisant par 36 et en arrondissant le quotient.

Lorsqu'on passera à la nouvelle période de base officielle, on convertira toutes les séries à l'aide de cette méthode. Par exemple, la série sur la base de 1992 de l'indice d'ensemble du Canada commencera en janvier 1914, tandis que celle des provinces commencera en septembre 1978.

Conversion d'indices annuels à une nouvelle période de base

Ce type de conversion arithmétique d'une période de base s'applique uniquement à des indices mensuels. L'application du facteur de conversion de la série ne permet pas d'obtenir directement la moyenne annuelle d'une série en fonction d'une nouvelle période de base officielle. On convertit plutôt la série mensuelle à la nouvelle période de base puis on calcule la moyenne annuelle comme étant la moyenne des douze indices mensuels de l'année civile.

Dans quelques séries, la conversion des indices mensuels à leur nouvelle base pour 1992 est de à 99,9 ou 100,1 plutôt que 100,0. Plutôt que d'accroître la précision des chiffres, Statistique Canada a décidé de ne pas toucher aux indices mensuels et de présenter la moyenne annuelle 100.0.

Répercussion de la conversion des indices à une nouvelle période de base.

En théorie, les mouvements de prix entre deux points dans le temps devraient être les mêmes quelle que soit la période de base. Dans la pratique, des écarts se produisent effectivement

table 2 compares the price movements for All-items Canada on the 1986 and the 1992 time bases from 1989 forward. The monthly movements differ by, at most, 0.1% over this period.

Rounding differences become larger as the indexes become smaller. Since the smallest index levels are generally found in the early years of a series, the largest differences are usually found farther back in time.

Is there a way of preserving the monthly movements when shifting to a new time base? Very simply, the only way of maintaining the movements would be to reflect indexes to several decimal places, a practice that is not warranted considering the level of precision of the the indexes.

Using time bases in contracts

Many contracts have clauses under which a sum of money is adjusted using a formula based on the movement of the CPI. The series used is almost always the All-items series for Canada, a province, or a city. The purpose of such clauses is to compensate for changes in the purchasing power of the original sum. The formula can be based either on the ratio of the indexes (i.e. the percentage change in price levels) or the difference between the indexes for the two points in time.

When drawing up an agreement, parties should consider the possibility of time-base changes during the life of the contract. For instance, a maintenance agreement involving young children could be in force for 15 years, during which time the official time base could change several times. Lease agreements frequently extend for even longer periods.

Where the indexing formula is based on the ratio of indexes, the results do not depend on the time base except for differences due to rounding. Parties to a contract are encouraged to use indexes on the time base in effect at the time of the adjustment rather than indexes on older official time bases primarily because information is more readily available on the current time base. The differences in movements between bases are small and do not consistently give an advantage to one party or the other.

Where the indexing formula is based on the difference between indexes, the results are dependent on the time base used. As an example, the All-items Canada index rose 2.0 points between May 1996 and May 1997 when the 1986

à cause de l'arrondissement. Le tableau 2 compare les mouvements de prix de l'indice d'ensemble du Canada pour les données sur la base 1986 et 1992 à partir de 1989. Les mouvements mensuels s'écartent d'au plus 0,1% au cours de cette période.

Les écarts attribuables à l'arrondissement prennent plus d'ampleur à mesure que les indices diminuent. Étant donné que c'est généralement dans les premières années d'une série qu'on trouve les plus petits niveaux d'indices, les grands écarts surviennent habituellement plus loin dans le temps.

Est-il possible de préserver les mouvements mensuels lorsqu'on passe à une nouvelle période de base? Très simplement, la seule façon de préserver les mouvements consisterait à calculer les indices à plusieurs décimales, pratique qui ne se justifie pas compte tenu du niveau de précision des indices.

Utilisation de la période de base dans les contrats

Plusieurs contrats renferment des dispositions permettant de rajuster une somme à l'aide d'une formule calculée d'après les mouvements de l'IPC. Il s'agit dans presque tous les cas de l'indice d'ensemble pour le Canada, une province ou une ville. Les dispositions de ces contrats servent à neutraliser les fluctuations du pouvoir d'achat de la somme en question. On peut faire reposer la formule sur le rapport des indices (c.-à-d. la fluctuation en pourcentage des niveaux de prix) ou sur l'écart entre deux indices dans le temps.

Lorsque deux parties concluent un accord, elles devraient songer à la possibilité qu'un changement de la période de base survienne pendant la durée de vie du contrat. Par exemple, un accord d'entretien à l'égard de jeunes enfants pourrait être en vigueur pendant 15 ans, malgré plusieurs changements de la période de base officielle. Il arrive souvent qu'un bail dure encore plus longtemps.

Lorsque la formule d'indexation repose sur le rapport des indices, le résultat ne dépend pas de la période de base, si ce n'est des écarts attribuables à l'arrondissement. Les parties à un contrat devraient utiliser les indices de la période de base en vigueur au moment du rajustement, plutôt que les indices d'anciennes périodes de base officielles, en grande partie parce que l'information est plus facilement disponible pour la période de base courante. Les écarts de mouvement entre deux périodes de bases sont infimes et n'avantageront pas nécessairement toujours une partie au détriment de l'autre.

Si la formule d'indexation repose sur l'écart entre deux indices, le résultat dépend de la période de base utilisée. Par exemple, l'indice d'ensemble pour le Canada augmente de 2,0 points entre mai 1996 et mai 1997 si l'on utilise les chiffres de la période de base 1986, mais de seulement 1,6 point si l'on utilise les

based figures are used, but only 1.6 points using the 1992 based figures. Still, it is possible to update contracts using point differences using conversion factors.

chiffres de la période de base 1992. Même à cela, il est possible de mettre à jour les contrats à l'aide des écarts de points en utilisant les facteurs de conversion.

Switching to the new time base-two examples

The All-items Canada CPI is used to adjust Old Age Security and Canada Pension Plan payments. When the formula includes a CPI index published on the new base, the calculation will be done using indexes on the new base at the earliest opportunity.

The Old Age Security adjustment for April 1998 is based on the movement of the CPI between the 3-month periods August to October 1997 and November 1997 to January 1998. The index for January 1998 is on the new time base, so all the indexes will be taken from that time base.

Canada Pension Plan payments for January 1998 will be adjusted using the average index for the twelve-month period ending October 1997 divided by the average index for the twelve-month period ending October 1996. These adjustments will be done using 1986 based figures. The payments for January 1999 will be adjusted using the average indexes for the twelve month periods ending in October 1998 and October 1997. These will be calculated using 1992 based figures.

Le passage à la nouvelle période de base-deux exemples

L'IPC d'ensemble pour le Canada sert à rajuster les prestations de la sécurité de la vieillesse et du Régime de pensions du Canada. Lorsque la formule comprendra un indice publié d'après la nouvelle période de base, le calcul utilisera les indices de cette nouvelle période de base à la première occasion

Pour avril 1998, les rajustements des prestations de la sécurité de la vieillesse se fonderont sur le mouvement de l'IPC entre les périodes de trois mois s'échelonnant d'août à octobre 1997 et de novembre 1997 à janvier 1998. L'indice pour janvier 1998 reposera sur la nouvelle période de base de sorte que tous les indices découleront de cette même période de base.

Les paiements du Régime de pensions du Canada pour janvier 1998 seront rajustés à l'aide de l'indice moyen de la période de 12 mois terminée en octobre 1997, divisé par l'indice moyen de la période de 12 mois prenant fin en octobre 1996. Ces rajustements seront effectués au moyen des chiffres sur la base de 1986. Les paiements pour janvier 1999 seront rajustés à l'aide des indices moyens de la période de 12 mois prenant fin en octobre 1998 et octobre 1997. Ces rajustements s'appuieront sur les chiffres sur la base de 1992.

Obtaining current indexes on earlier official time bases

Series on the 1986 time base will be discontinued in December 1997. Exceptions will be made for the All-items series for Canada, the provinces and the cities for which the CPI is published. Statistics Canada has a policy of maintaining these series on one previous time base. This policy recognizes that in many contracts these series are tied to a time base. The policy provides users with an opportunity to modify their contracts.

Special procedures will apply to the 1986 based All-items series. They will be identical to those published for the period up to December 1997. Since the 1992 based series was obtained by dividing by a conversion factor, the 1986 based indexes will be obtained by multiplying the 1992 based indexes by the same factor for the period starting in January 1998.

All-items indexes on earlier time bases will not be available from Statistics Canada. Users may, however, calculate their own indexes. Statistics Canada suggests they be calcu-

Comment obtenir des indices courants à partir de périodes de base officielles antérieures

Les séries de la période de base 1986 prendront fin en décembre 1997. Feront exception les séries de l'indice d'ensemble pour le Canada, les provinces et les villes pour lesquelles l'IPC est publié. Statistique Canada a comme politique de préserver de telles séries pour une période de base antérieure, car il sait pertinemment que, dans de nombreux contrats, ces séries sont reliées à une période de base. La politique offre aux utilisateurs l'occasion de modifier leur contrat.

La série d'ensemble pour 1986 sera identique à celle qui a paru pour la période prenant fin en décembre 1997. À compter de janvier 1998, on calculera l'indice à l'aide du facteur de conversion de la série. Étant donné qu'on a obtenu la série sur la base de 1992 en divisant l'indice par un facteur de conversion, on obtiendra les indices sur la période de base de 1986 en multipliant l'indice sur la base de 1992 par le même facteur.

On ne pourra pas obtenir de Statistique Canada les indices d'ensemble d'autres périodes de base antérieures. Toutefois, les utilisateurs pourront calculer leurs propres indices. Statistique

lated directly from the 1992 time base to the time base desired, rather than through the intervening official time bases in order to minimize rounding issues. A table showing the factors to use when converting to previous official time bases will be available from Statistics Canada.

Canada suggère, afin de minimiser les problèmes d'arrondissement, de les calculer directement de la période de base de 1992 à la période de base souhaitée, plutôt qu'en faisant intervenir les périodes de base officielles entre les deux points en question. Un tableau indiquant les facteurs à utiliser pour effectuer une conversion à une période de base précédente pourra être obtenu de Statistique Canada.

7	Pork chops – Côtelettes de porc	1 kg	9.63	10.03	9.82
8	Butt roast – Rôti de soc	1 kg	6.00	6.45	6.41
9	Chicken – Poulet	1 kg	4.18	4.15	4.43
10	Bacon	500 g	3.63	3.77	3.86
11	Wieners – Saucisses fumées	450 g	2.46	2.42	2.35
12	Canned sockeye salmon – Saumon sockeye, en conserve	213 g	3.57	3.56	3.53
13	Homogenized milk – Lait homogénéisé	1 l	1.38	1.39	1.39
14	Partly skimmed milk – Lait partiellement écrémé	1 l	1.34	1.34	1.34
15	Butter – Beurre	454 g	2.91	2.95	2.95
16	Processed cheese food slices – Préparation de fromage fondu, en tranches	250 g	2.74	2.74	2.74
17	Evaporated milk – Lait évaporé	385 ml	1.05	1.05	1.05
18	Eggs – Oeufs	1 dz	1.75	1.79	1.77
19	Bread – Pain	675 g	1.34	1.35	1.36
20	Soda crackers – Biscuits soda	450 g	1.95	1.88	1.92
21	Macaroni	500 g	0.98	0.99	0.96
22	Flour – Farine	2.5 kg	3.70	3.72	3.66
23	Corn flakes – Flocons de maïs	675 g	2.94	3.00	3.01
24	Apples – Pommes	1 kg	2.22	2.16	2.23
25	Bananas – Bananes	1 kg	1.19	1.26	1.24
26	Grapefruits – Pamplemousses	1 kg	1.24	1.39	1.55
27	Oranges	1 kg	1.72	1.94	1.99
28	Apple juice, canned – Jus de pommes, en conserve	1.36 l	1.71	1.74	1.72
29	Orange juice, tetra-brick – Jus d'orange, tetra-brick	1 l	1.67	1.68	1.67
30	Cabbage – Choux	1 kg	1.01	1.11	1.09
31	Carrots – Carottes	1 kg	1.27	1.30	1.32
32	Celery – Céleri	1 kg	1.52	1.55	1.87
33	Mushrooms – Champignons	1 kg	5.40	5.32	5.43
34	Onions – Oignons	1 kg	0.88	1.08	1.13
35	Potatoes – Pommes de terre	4.54 kg	2.40	2.56	2.73
36	French fried potatoes, frozen – Pommes de terre frites, congelées	1 kg	1.66	1.66	1.67
37	Baked beans, canned – Fèves au lard en conserve	398 ml	0.77	0.77	0.77
38	Tomatoes, canned – Tomates, en conserve	796 ml	1.19	1.19	1.21
39	Tomato juice, canned – Jus de tomate en conserve	1.36 l	1.46	1.45	1.46
40	Ketchup	1 l	2.38	2.37	2.33
41	Sugar, white – Sucre blanc	2 kg	2.12	2.20	2.18
42	Coffee, roasted – Café torréfié	300 g	3.58	3.67	3.85
43	Coffee, instant – Café instantané	200 g	5.62	5.63	5.71
44	Tea (bags) – Thé (sachets)	72	3.02	3.02	3.05
45	Cooking or salad oil – Huile à frire ou à salade	1 l	3.07	3.03	3.00
46	Soup, canned – Soupe, en conserve	284 ml	0.72	0.72	0.71
47	Baby food – Nourriture pour bébés	128 ml	0.52	0.51	0.51
48	Peanut butter – Beurre d'arachide	500 g	2.60	2.54	2.58
49	Fruit flavoured crystals – Cristaux à saveur de fruit	2.25 l	1.29	1.27	1.26
50	Soft drinks, cola type – Boissons gazeuses, cola	2 l	1.24	1.23	1.20
51	Soft drinks, lemon type – Boissons gazeuses, citron-lime	2 l	1.29	1.28	1.26
52	Laundry detergent – Détergent synthétique, en poudre	4 l	6.28	6.25	6.13
53	Paper towels (rolls) – Essuie-tout en papier (rouleaux)	2	1.61	1.63	1.63
54	Facial tissue – Papier-mouchoirs	200	1.39	1.38	1.39
55	Bathroom tissue (rolls) – Papier hygiénique (rouleaux)	4	1.84	1.82	1.79
56	Shampoo – Shampoing	300 ml	3.01	3.01	3.09
57	Deodorant – Désodorisant	60 g	2.81	2.82	2.81
58	Tooth paste – Pâte dentifrice	100 ml	1.32	1.33	1.30
59	Cigarettes	200	32.78	32.95	33.29

THE CONSUMER PRICE INDEX TECHNICAL NOTES

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 1992. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPI's are published for Canada, the ten provinces, Whitehorse and Yellowknife. Some CPI information is also available for an additional sixteen cities. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or cities.

Population Coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse and Yellowknife are not represented by the index. Previous to January 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time Reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 1986=100. The official time base was changed from 1981=100 to 1986=100 starting with the CPI for June 1990. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent Versus Index Point Changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price Coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax as well as provincial retail sales taxes wherever applicable. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents. The number of prices required for a given commodity depends on the

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION NOTES TECHNIQUES

Définition

L'indice des prix à la consommation (IPC) est un indicateur des variations des prix à la consommation payés par la population cible. L'IPC mesure la variation des prix en comparant, dans le temps, le coût d'un panier fixe de biens et de services. Ce panier est basé sur les dépenses de la population cible au cours d'une période de référence qui est actuellement 1992. Comme ce panier comprend des biens et des services dont la quantité et la qualité ne changent pas ou sont équivalentes, l'indice ne retrace que les mouvements de prix purs.

On publie des IPC distincts pour le Canada, les provinces, Whitehorse et Yellowknife. Certains renseignements sont aussi publiés pour seize autres villes. Comme l'IPC est une mesure de la variation de prix entre deux périodes, il ne peut servir à relever les différences de niveau des prix entre les provinces ou les villes.

Champ d'observation de la population

La population couverte par l'indice des prix à la consommation comprend les familles et les personnes vivant dans des ménages privés urbains et ruraux. Pour des raisons pratiques, les résidents des Territoires à l'extérieur de Whitehorse et de Yellowknife ne sont pas représentés. Avant janvier 1995, la population cible comprenait les ménages privés vivant dans les centres urbains du Canada dont la population était de 30,000 habitants ou plus.

Période de base

L'IPC compare, en pourcentage, les prix au cours d'une période donnée à ceux de la période de base officielle, qui est actuellement 1986 = 100. On a changé la période de base de 1981 = 100 à 1986 = 100 à compter de l'IPC du mois de juin 1990. Ce changement est uniquement une conversion arithmétique qui modifie le niveau des indices, mais laisse les variations en pourcentage entre deux périodes intactes, à l'exception des différences dues à l'arrondissement.

Changements en pourcentage versus changements en points d'indice

Les fluctuations des indices d'un mois à l'autre sont exprimées en pourcentage, plutôt qu'en point d'indice. Les variations en point d'indice sont en fonction du niveau de l'indice qui, à son tour, dépend de la période de base de l'indice en question. Par contre, il est facile de calculer la variation en pourcentage entre deux périodes en divisant la différence en point d'indice entre ces deux périodes par l'indice de la période antérieure, et en multipliant ensuite ce résultat par cent.

Champ d'observation des prix

Les prix qui entrent dans le calcul de l'IPC sont les prix finals, ce qui comprend les taxes d'accise et les autres impôts indirects que les consommateurs paient. En particulier, les prix comprennent la taxe sur les produits et les services, ainsi que les taxes de vente au détail provinciales, au besoin. L'IPC peut donc varier à cause des modifications apportées à ces taxes.

La sélection des biens et des services, ainsi que des points de vente où l'on recueille les prix, se fait au jugé, à l'exception des loyers. Le nombre de prix nécessaires pour un bien ou service donné dépend de

importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets. The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and Linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In January 1995, the basket reflecting the 1992 expenditure patterns replaced the 1986 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Family Expenditure Survey data. Text Table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. those of 1992 and 1986. Because both sets of weights are expressed in December 1994 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets. The differences are a result of changes in consumer expenditure patterns over time and of the expansion of the population coverage.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see the Consumer Price Index Reference Paper cat. 62-553 (Occasional) or contact Prices Division.

TEXT TABLE 1
Comparison of the 1992 and 1986
Distribution of Expenditures used in the
Consumer Price Index, by Major
Component, for Canada

Major Components	1992 Expenditures		1986 Expenditures ¹		Composantes principales
	Dépenses de 1992		Dépenses de 1986 ¹		
	Expressed in 1992 prices	Expressed in Dec. 1994 prices	Expressed in Dec. 1994 prices	Expressed in Dec. 1994 prices	
	Exprimées en prix de 1992	Exprimées en prix de Déc. 1994	Exprimées en prix de Déc. 1994	Exprimées en prix de Déc. 1994	
All-items	100.0	100.0	100.0	100.0	Ensemble
Food	18.0	18.0	17.0	17.0	Aliments
Shelter	27.6	27.9	25.3	25.3	Logement
Household operations and furnishings	10.4	10.0	9.7	9.7	Dépenses et équipement du ménage
Clothing and footwear	6.8	6.6	8.6	8.6	Habillement et chaussures
Transportation	17.2	18.3	18.8	18.8	Transports
Health and personal care	4.3	4.3	4.3	4.3	Santé et soins personnels
Recreation, education and reading	10.2	10.4	10.3	10.3	Loisirs, formation et lecture
Alcoholic beverages and tobacco products	5.5	4.5	6.0	6.0	Boissons alcoolisées et produits du tabac

¹ The 1986 data were adjusted to be comparable with the classification system used for the 1992 basket.

¹ Les données de 1986 ont été modifiées de façon à correspondre au système de classification utilisé pour le panier de 1992.

l'importance et de la nature de celui-ci. L'échantillon est conçu de façon à représenter les produits et services ainsi que les établissements à fort volume de ventes. Le principal objectif du plan de sondage est d'obtenir une image précise, fiable et impartiale de l'inflation représentée par les prix à la consommation aux niveaux national et provincial.

La collecte des prix pour l'indice d'un mois donné se fait pendant les trois premières semaines du mois. Bien que les prix de la plupart des biens et services entrant dans l'IPC soient recueillis chaque mois, les prix des biens ou des services ayant des variations de prix moins fréquentes (impôts fonciers, tarifs de l'électricité, par exemple) sont recueillis à des intervalles dépassant un mois. Des relevés spéciaux de prix sont faits lorsqu'il est évident que des variations de prix appréciables se sont produites entre les périodes régulières de relevé de prix.

Pondération et enchaînement

L'IPC maintient des proportions quantitatives fixes (pondérations) entre les biens et les services pendant la durée de vie d'un panier. Le panier est habituellement mis à jour régulièrement afin de prendre en compte les changements dans la composition des dépenses des consommateurs. En janvier 1995, le panier qui retrace la composition des dépenses de 1992 a remplacé le panier de 1986. La continuité des séries de l'IPC est assurée par un «enchaînement» des indices correspondants provenant de paniers consécutifs.

On calcule l'IPC comme une moyenne pondérée d'indices de prix de biens ou de services précis. Les pondérations sont tirées des données de l'Enquête sur les dépenses des familles. Le tableau explicatif 1 compare les parts des dépenses des deux paniers les plus récents, ceux de 1992 et de 1986. Comme les deux ensembles de pondérations sont exprimés en prix de décembre 1994, qui est le «mois d'enchaînement», les différences reflètent les mouvements des quantités relatives achetées entre les deux paniers. Les différences s'expliquent par les variations de la composition des dépenses des consommateurs dans le temps et par l'extension du champ d'observation de la population.

Quand on reconstruit ou ré-agrège les séries publiées de l'IPC, il faut prendre en compte les changements de pondérations et les procédures d'enchaînement. Pour une description de la méthodologie à utiliser dans la reconstruction des séries de l'IPC ré-agrégées, consulter le document de référence sur l'indice des prix à la consommation portant le numéro de catalogue 62-553 (Hors série), ou s'adresser à la Division des prix.

de 1992 et 1986 utilisées pour l'indice des
prix à la consommation, par composante
principale, pour le Canada

Whitehorse and Yellowknife Indexes

The relatively small size of the housing market in these two cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation, Owned Accommodation and Shelter are not published for these two cities. Further, the All-items indexes published for these two cities are not strictly comparable with the same indexes for the provinces or the other sixteen urban centres.

Calculation of City Indexes

With the introduction of the 1992 basket, emphasis was shifted from city data to provincial data. City All-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each city. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between cities, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the city's expenditure pattern to arrive at each city's All-items index.

Seasonal Adjustment

Seasonal adjustment is performed within each basket at the level of the eight major components. The seasonally adjusted All-items series is a weighted average of the eight seasonally adjusted major components. It was linked in December 1994 with the seasonally adjusted series calculated before then to form a continuous series starting in September 1978. Each month's data is fixed until the end of the year when the series is revised. Because the revision can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

The Purchasing Power of the Consumer Dollar

As prices rise, a dollar will buy fewer goods and services. Because the CPI measures changes in the general price level, it is often used to estimate changes in the purchasing power of the Canadian dollar. For example, between 1986 and 1994, the All-items Canada CPI rose from 100.0 to 130.7, indicating that consumers had to pay 30.7% more to buy the same quantity of goods and services. Looked at in terms of purchasing power, a dollar in 1994 would purchase the same amount as 76.5¢ $\{(100.0 / 130.7) * 100\}$ did in 1986. This process may be interpreted as the deflation of money or the adjustment of money values to eliminate price effects.

Indices de Whitehorse et de Yellowknife

La taille relativement faible du marché de l'habitation de ces deux villes rend difficile la construction d'indices de prix fiables pour les maisons neuves. Pour corriger cette situation, on se sert du mouvement des prix du logement en location pour obtenir une approximation de celui des maisons neuves. Les renseignements sur les loyers proprement dits sont obtenus à des fréquences de relevé des prix et selon des méthodes de collecte qui diffèrent de celles utilisées ailleurs dans le pays. En raison de ces problèmes, les indices du logement en location, du logement en propriété et du logement ne sont pas publiés pour ces deux villes. Enfin, les indices d'ensemble publiés pour ces deux villes ne sont pas strictement comparables aux mêmes indices pour les provinces ou les seize autres centres urbains.

Calcul des indices des villes

Avec la venue du panier de 1992, l'accent est passé des données des villes aux données des provinces. Les séries des indices d'ensemble pour les villes ont été conservées parce que de nombreux utilisateurs se sont habitués à ce service, mais la méthode de calcul a changé. Les indices du logement sont calculés pour chaque ville. Ainsi, on prend en compte l'importance du logement dans le panier, les différences appréciables et persistantes dans les mouvements des prix entre villes et la disponibilité de données locales. Pour les sept autres composantes principales, on utilise le mouvement de l'indice provincial (pour Montréal, Toronto et Vancouver, un indice infra-provincial). Les composantes principales sont agrégées à partir de la composition des dépenses de la ville pour donner, en fin de compte, l'indice d'ensemble de cette dernière.

Désaisonnalisation

On effectue la désaisonnalisation pour chaque panier au niveau des huit composantes principales. La série désaisonnalisée de l'indice d'ensemble est une moyenne pondérée des huit composantes principales désaisonnalisées. Elle a été enchaînée en décembre 1994 à la série désaisonnalisée calculée auparavant pour donner une série continue qui commence en septembre 1978. Les données de chaque mois sont inchangées jusqu'à la fin de l'année, lorsque la série fait l'objet d'une révision. Comme cette dernière peut entraîner des changements dans les niveaux et dans les mouvements des indices, il est recommandé aux utilisateurs qui se servent de l'IPC à des fins d'indexation de prendre les indices bruts.

Le pouvoir d'achat du dollar à la consommation

Lorsque les prix montent, le dollar achète moins de biens et de services. Parce qu'il mesure les variations du niveau général des prix, l'IPC sert souvent à estimer les variations du pouvoir d'achat du dollar canadien. Ainsi, entre 1986 et 1994, l'IPC d'ensemble pour le Canada est passé de 100,0 à 130,7 : les consommateurs ont donc dû déboursier 30,7% de plus pour acheter la même quantité de biens et de services. Pour ce qui est du pouvoir d'achat, le dollar de 1994 achèterait la même quantité de biens et de services que 76,5 cents $\{(100,0 / 130,7) * 100\}$ en 1986. Ce processus peut s'interpréter comme la déflation de l'argent ou l'ajustement des valeurs monétaires, pour la correction des effets de prix.

Appendix 2

Average retail prices

Average retail prices for food, household supplies, personal care items and cigarettes

Table 5 shows, for each month of the quarter, average prices for selected food, household supply and personal care items and for cigarettes.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed cities using the population of these cities as weights.

The commodities which are priced can vary in quality between outlets or between cities. This is the reason why average prices are not published for each of those cities. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Appendice 2

Prix de détail moyens

Prix de détail moyens pour les aliments, les produits d'entretien ménager, les produits de soins personnels et les cigarettes

Le tableau 5 présente, pour chaque mois du trimestre, des prix moyens pour certains produits alimentaires, ménagers et de soins personnels ainsi que pour les cigarettes.

Les données sur les prix utilisées dans le calcul sont celles qui ont été recueillies dans le cadre de l'enquête mensuelle régulière de l'IPC. Les prix des aliments et des produits d'entretien ménager et de soins personnels ont été relevés dans des supermarchés alimentaires, alors que les prix des cigarettes ont été observés dans des supermarchés, dans des magasins à rayons, dans des pharmacies et dans des débits de tabac. Les prix moyens pour chaque produit sont obtenus en effectuant une moyenne pondérée des prix moyens de chaque ville observée en utilisant la population de ces villes comme pondération.

Les produits dont on relève les prix peuvent varier en qualité d'un point et de vente ou d'une ville à l'autre. C'est la raison pour laquelle les prix moyens ne sont pas publiés pour chacune des villes. Les marques sélectionnées ainsi que les points de vente peuvent aussi varier d'un mois à l'autre. Les prix moyens ne sont donc pas nécessairement entièrement comparables d'un mois à l'autre et ne devraient pas être considérés comme une mesure appropriée des mouvements de prix purs à travers le temps. L'IPC utilise un échantillon apparié de produits et de points de vente pour calculer le mouvement de prix pur des produits dans le temps.

Appendix 3

INTER-CITY INDEXES OF RETAIL PRICE DIFFERENTIALS

Table 10 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly consumer price indexes.

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets as far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practices. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100.

The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city weighting patterns updated for price change to the time of the inter-city retail price comparison study.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 10

(2) The weights shown are rounded 1992 weights for Canada as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1992 Expenditures (Occasional)**, Catalogue 62-553. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price change since 1992.

Appendice 3

INDICES COMPARATIFS DES PRIX DE DÉTAIL PAR VILLE

Le tableau 10 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie des relevés de prix utilisés pour la production de l'indice mensuel des prix à la consommation.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont d'abord été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison des 11 villes étant égale à 100).

Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération des 11 villes combinées, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importants pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 10

(2) Les poids indiqués sont les poids arrondis pour 1992 pour le Canada figurant dans le **Document de référence de l'Indice des prix à la consommation, mise à jour fondée sur les dépenses de 1992** (hors-série, no. 62-553 au catalogue). Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1992.

(3) Includes the following sub-groups: sugar and syrups, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegars, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

(3) Comprend les sous-groupes suivants: sucre et sirop, confiserie, margarine, autres huiles et matières grasses comestibles, café, thé, condiments, épices et vinaigres, soupe, aliments pour bébés et enfants, préparations alimentaires précuites et congelées, boissons non-alcoolisées et toutes autres préparations alimentaires.

Appendix 4

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

Appendice 4

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 15 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 15 présente une sélection de quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-9598.
