#### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

# User information

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

# Preface

Since 1975, the **Market Research Handbook** has been an authoritative source of socio-economic information, reflecting key characteristics of local and national markets in Canada. By providing accurate and timely statistics on the changing demographics, standards of living and economic characteristics of Canadian society, the **Handbook** allows businesses to locate target markets, track their market share and assess their competitive position.

There are 10 sections. They start with a user's guide, followed by sections on population, labour market and income, consumer expenditures, housing and household characteristics, macroeconomic and financial statistics, international trade in goods and services, business and industry statistics, census metropolitan areas and census agglomerations and projections.

Every effort is made to ensure the timeliness of the information at the time the **Market Research Handbook** goes to press. Inevitably, however, some of the data will have been superseded by the time the **Handbook** is published. Many of the data tables in the **Market Research Handbook** are derived from CANSIM. Although, every effort has been made to use the most current information available, due to the dynamic nature of CANSIM updates, the latest data available in CANSIM may differ from the data used in the tables and analysis when the publication was produced. Moreover, some data – particularly from the census – are only updated on an occasional basis. Where recent statistics are not yet available, the **Handbook** retains data from earlier surveys.

We are interested in knowing what you think of the **Market Research Handbook**, and what improvements you would like to see. We therefore invite you to send us your comments through our Website at *www.statcan.ca* or by contacting the Small Business and Special Surveys Division: Statistics Canada, Ottawa, Ontario, K1A OT6 (telephone: 1-877-679-2746).

# Section 1

# User's guide: how to profit from the Market Research Handbook

The **Market Research Handbook** provides a broad range of socio-economic statistics to reveal market trends in Canada, as viewed through the prism of Statistics Canada data. For market researchers and analysts alike, the **Handbook** puts statistics to work to highlight emerging trends, position products, and gain a competitive edge – in short, to profit from the facts.

# 1.1 From megatrends to metropolitan areas

The broad selection of business, economic and social statistics contained in this handbook reflects rapidly changing lifestyles and consumer needs in Canada today. According to David Foot, author of the widely acclaimed book, **Boom, Bust & Echo**, "Demographics explain about two-thirds of everything." In the **Handbook** you will find population trends showing characteristics such as age, education and ethnicity – key variables reflecting the demand for goods and services catering to Canada's increasingly diverse and aging society.

As well as population statistics portraying Canada's multicultural mosaic, the **Handbook** contains information on business demographics, which depicts the business population by industry, by size of business and by urban area. In addition, selected macroeconomic statistics provide the economic setting for analysis of recent trends, such as the impact on household incomes and expenditures of the growth in output and employment, low levels of inflation and interest rates, and improvement in Canada's current account and fiscal positions.

Market conditions are not merely a national phenomenon, however; they also reflect the particular

characteristics of different regions and localities. To address the geographic dimension, the **Handbook** provides selected information for each of the provinces and territories and 45 of Canada's largest urban areas. Business planning also involves the assessment of future prospects. To cater to this requirement, the **Handbook** includes an outlook section consisting of averages of selected private-sector economic forecasts and Statistics Canada's population projections.

# 1.2 How to use the Market Research Handbook

Given the wealth of information it contains, the **Market Research Handbook** can be a bit daunting at first glance. In this section, we show how the **Handbook** provides a framework for analysing the market forces at work in the Canadian economy (figure 1.1 "Framework for analysis of market trends").

Market forces represent the interaction of supply and demand, and are the product of a wide variety of socio-economic relationships affecting purchasing power on the one hand and production on the other. The **Handbook** presents a broad range of social and economic indicators that reflect the underlying forces shaping both demand and supply.

Figure 1.1 ("Framework for analysis of market trends") groups the different kinds of economic and social indicators into key categories for analysing market forces. It distinguishes between sources of consumer demand (stemming essentially from households, or persons), sources of supply (originating essentially with businesses), and macroeconomic variables, reflecting the broader economic environment. The table also shows key socio-economic indicators that have a strong bearing on demand or supply – demographic variables, income statistics (purchasing power for consumers and profits for businesses), and consumer demand and supply.

David K. Foot with Daniel Stoffman, Boom Bust & Echo: How to Profit from the Coming Demographic Shift, (Toronto: Macfarlane, Walter & Ross, 1996).

### 1.3 Key socio-economic indicators

### 1.3.1 Demographics: People come first

Retail markets are essentially about people. Section 2 of the **Handbook** highlights demographic statistics to show the origins of demand. Population data contain a wealth of information about the strength of demand for a wide variety of household goods and services. Trends from the latest Census show not only population growth, but also vital information for marketers such as increased ethnic diversity, the prevalence of different

types of family structure and the aging of society, all of which have a direct impact on consumer demand.

# 1.3.2 Labour market and revenue : How much do Canadians make?

Employment and earnings are the key variables affecting purchasing power. In Section 3, the **Handbook** contains information from the Labour Force Survey showing changes in the number of people employed in each of the provinces and

territories. In addition, this handbook provides a comprehensive picture of the purchasing power of Canadian consumers through trends in average weekly earnings, total employment earnings, investment income, and receipts from government programs (such as unemployment insurance).

# 1.3.3 Consumer demand: What do Canadians spend their money on?

If you want to know what people actually spend their money on, you can find it in Section 4 of the Handbook, which provides information from the Household Spending Survey on expenditure patterns for different income groups and major urban areas. The Handbook also shows the weekly food bill for households, while changes in consumer tastes can be gauged from shifts in per capita food consumption and the consumption of alcoholic beverages. Another important indicator of household expenditures is represented by the types of homes we live in and the goods we own. Section 5 show how many people own their own homes, and how many Canadian households have luxury goods such as air conditioning and camcorders, have three cars or use new technologies such as the Internet and cellular phones.

#### 1.3.4 Supply chain

The counterpart to consumer demand is the supply of goods and services. Supply consists not only of domestic production, but also imports and the entire distribution network. Section 6 of the **Handbook** focusses on data related to the gross domestic product (GDP), which is a measure of the value of production of all goods and services in the economy. Section 7 contains import and export data, reflecting the degree of import penetration or export orientation for major categories of goods. At a more detailed level, Section 8 shows industrial data for manufacturing and selected consumer goods and service industries. This section also documents the distribution of goods through retail and wholesale trade.

# 1.3.5 Business income : How profitable are Canadian businesses?

Just as household income is a measure of a consumer's standard of living, so profits are the acid test of business success. Section 6 includes data

on profits, profit margins, and rates of return, providing industry averages that businesses may compare against their own operating characteristics.

#### 1.3.6 Markets are local

Even in an era of globalization, retail markets are essentially local. While national patterns set the stage, business people must be in touch with the realities of the markets in which they actually operate. The **Handbook** addresses the geographic dimension by providing key data for each of the provinces and territories and, in section 9, for 45 of Canada's largest urban areas.

# 1.3.7 Business demographics for business-to-business marketing

This edition of the **Market Research Handbook** contains information on business demographics from Statistics Canada's Business Register. In sections 8 and 9, you will find information on the number of businesses in different industries and in each of the major urban areas, as well as the number of small and medium-sized businesses. They provide a measure of market potential for different types of industrial goods and office equipment, as well as the number of business establishments operating in specific industries and metropolitan areas – important data for business-to-business marketing and for any prospective new business.

#### 1.4 Additional information

Although the **Handbook** contains an impressive amount of detail, we have had to be selective. Some types of information are available in massive quantity and huge detail in terms of geography, industry, time frame, or some other characteristic, but because of space limitations the **Handbook** is restricted to information at a fairly aggregate level.

To help users satisfy their unique market research needs, the **Handbook** documents source information and provides help lines. Each table shows the data source, including the title and catalogue number of the source publication. The Handbook also shows the telephone number of Statistics Canada advisory services who will, with pleasure, direct you to the contact division or person for obtaining more detailed information about the data or special

tabulations (available on a cost-recovery basis). In addition, to facilitate access to the latest data through CANSIM (Statistics Canada's computerized Canadian Socio-economic Information Management database), the **Handbook** provides related data matrices for many of the tables.

#### 1.5 On-line access to CANSIM

CANSIM contains over 750,000 individual data time series organized into over 8,000 matrices. Since its inception in 1969, CANSIM has been Statistics Canada's prime source for disseminating up-to-date statistical information on the Canadian economy. Real-time access to the wealth of data available from CANSIM is now available on-line through the Statistics Canada Web site at www.statcan.ca. Not only are the data updated on the very day that new values for these series are released, but a longer time frame is provided for most of the series referenced in the Market Research Handbook. Many of the data tables in the Market Research Handbook are derived from CANSIM. Although, every effort has been made to use the most current information available, due to the

dynamic nature of CANSIM updates, the latest data available in CANSIM may differ from the data used in the tables and analysis when the publication was produced.

# 1.6 Access to Statistics Canada's electronic publications at no charge

Effective April 24, 2006, all electronic publications on Statistics Canada's Web site were made available free of charge. The Agency has been steadily increasing the volume of free content on its Web site to respond to the information needs of Canadians. This latest move makes available at no charge more than 150 electronic publications for which fees were previously charged. Statistics Canada will continue to charge for print versions of publications and for other electronic products and services, such as CD-ROMs, specialized data tables and customized retrievals from CANSIM and the Canadian International Merchandise Trade database.

# Section 2

### **Population growth**

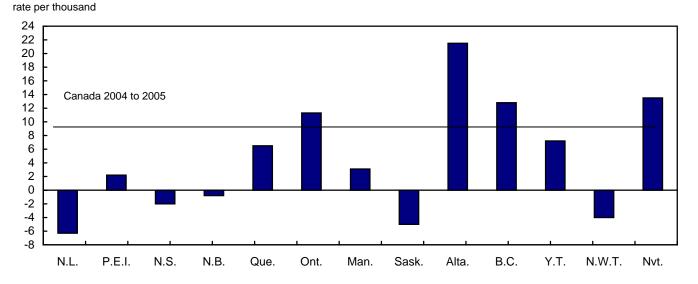

Canada's population continues to grow at a slow but steady pace. For the last six years, the population has increased by about 1% each year. In 2005, Canada's estimated population grew to over 32 million, an increase of almost 2 million people since 1999 (table 2.1). Ontario was the most populated province with 12.6 million people and Quebec was a distant second with close to 7.6 million people. The Atlantic Provinces were the least populated of all the provinces and Prince Edward Island had the lowest number of inhabitants (138,176). Of the territories, the Northwest Territories had the largest population (42,629 people) whereas the Yukon and Nunavut were of a similar size at 31,121 and 30,040 people, respectively.

Population growth in Canada varies greatly by province and territory. From 2004 to 2005, Alberta

Chart 2.1
Population growth rates, 2004 to 2005

had the highest growth rate of all the provinces and territories (22 per thousand), due mostly to high net interprovincial migration. Also above the Canadian average of 9.7 per thousand were Nunavut (13.7 per thousand), British Columbia (13.0 per thousand) and Ontario (11.4 per thousand). Below the Canadian average, but still experiencing growth were the Yukon Territory (7.3 per thousand) and Quebec (6.5 per thousand). Manitoba (3.1 per thousand) and Prince Edward Island (2.2 per thousand) experienced very little growth in their populations while five regions: Newfoundland and Labrador (-6.3 per thousand), Saskatchewan (-5.0 per thousand), the Northwest Territories (-3.9 per thousand), Nova Scotia (-2.0 per thousand) and New Brunswick (-0.8 per thousand) experienced negative growth (chart 2.1).

Source(s): Demography Division, Annual Demographic Statistics, catalogue no. 91-213-X and CANSIM table 051-0001.

### 2.1 Natural increase

Natural increase is the variation in population size over a given period as a result of the difference between the numbers of births and deaths. Canada's rate of natural increase was 326 per 100,000 persons in 2004 to 2005 (table 2.16). The territories and Alberta were the only regions with rates much higher than the national average. Conversely, the Atlantic provinces had low rates of natural increase. If current trends continue, Newfoundland and Labrador and Nova Scotia will register more deaths than births before 2010.

#### 2.2 Immigration

Canada's gain in population was mainly due to an increase in the number of immigrants (table 2.16). In 2005, 262,239 people immigrated to Canada, an 11% increase over 2004 (table 2.8). The majority (61%), had Asia as their last permanent residence. Over fifteen percent came from Europe and almost 10% came from Africa. The majority of new immigrants settled in Ontario (53.1%). Many also settled in Quebec (17.8%) and British Columbia (16.6%) (table 2.10).

### 2.3 Interprovincial migration

More than a quarter of a million people moved interprovincially in Canada from July 2004 to June 2005 yet all the provinces and territories experienced negative net interprovincial migration except for Alberta (34,423 persons), British Columbia (8,214 persons) and the Yukon Territory (53 persons) (table 2.16 and chart 2.2).

# 2.4 Undergraduate enrolment

The qualifications of a country's population have a great impact on employment growth and this in turn fuels economic activity. Employment growth is generally associated with increasing educational qualifications which are more important than ever in today's global and technological economy. In 2003, there were over 616,000 full-time students

enrolled in undergraduate studies in Canada, a 9.3% increase over the previous year. The higher number of enrolments can be attributed to two factors: the large number of people between the ages of 18 and 24 in the echo-boom generation (people born between 1980 and 1995) and the double cohort of graduates from Ontario secondary schools. Due to the elimination of Grade 13 from the Ontario curriculum two cohorts of students graduated at the same time and entered university simultaneously.

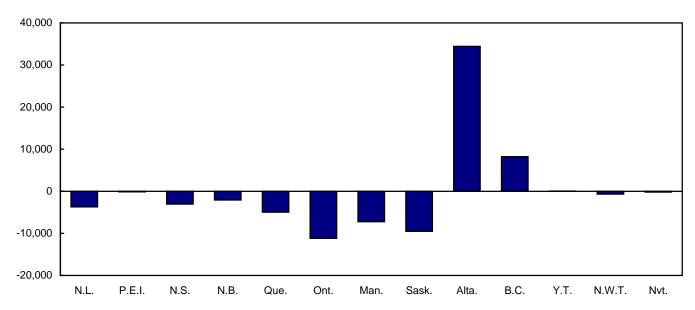

Women currently make up the majority of full-time undergraduate students in Canadian universities (6 out of every 10). Women outnumber or are equal to male students in almost every undergraduate program except for Computer and Information Sciences (18% female), Engineering (20% female), Transportation and Materials moving (36% female), Physical Sciences (41% female), Mathematics and Statistics (44% female), Theology and Religious Vocations (45% female) and Philosophy and Religious Studies (46% female) (table 2.11).

#### 2.5 Profile of Canadian families

The Statistics Canada term "census family" refers to a married couple (with or without children of either or both spouses), a couple living common-law (with or without children of either or both partners) or a lone parent of any marital status, with at least one child living in the same dwelling. In 2005, 81% of Canada's population belonged to a census family. The majority of census families were husband-wife families (83% to 86% depending on the province) and the remaining were lone-parent families (table 2.17).

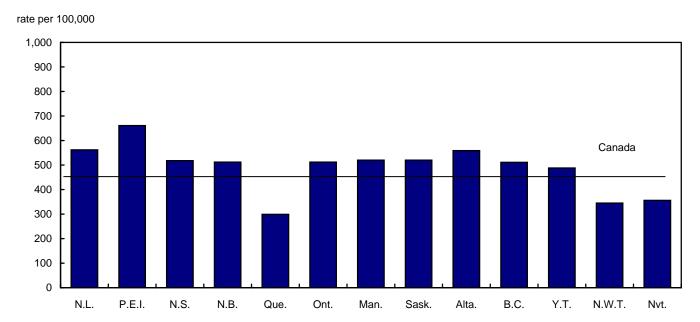

There was a sizeable increase in the number of couples who married in Canada in 2005. A total of 151,334 couples were married, an increase of 3.6% from 2004. Furthermore, the crude marriage rate of 469 marriages for every 100,000 population was higher than the 2004 rate by 12. Among the provinces there were very large differences in the rate of marriage. Prince Edward Island had the highest rate (661) whereas Quebec had the lowest (299) (chart 2.3).

## Section 3

### Labour market and Income statistics

## 3.1 Labour force statistics

To aid in the measurement of the performance of the Canadian economy, the Labour Force Survey was created to provide estimates of employment and unemployment. The Canadian labour force is defined as the number of people from the working-age population 15 years of age and over who are actively employed or seeking employment.

From 2004 to 2005, Canada's labour force grew by about 160,300 people or 1.0% to about 17.3 million. Almost 16.2 million people were employed and not quite 1.2 million were unemployed in 2005. The number of full-time workers grew by 1.6% to 13.2 million and the number of part-time workers increased by 0.5% to 3 million (table 3.1).

Historically, the number of men in the labour force has greatly outnumbered the number of women (62% vs. 38% in 1976), but, slowly, over time, the percentage of men to women is equalizing. In 2005, the labour force was made up of 53% men and 47% women (table 3.4) (chart 3.1). Interestingly, the largest labour force increases from 2004 to 2005 by age and sex are in the older ranges. The number of men in the labour force aged 65 to 69 increased by 7.0% and the number of women aged 65 to 69 and 70 years old and more increased by 12.4% and 16.5%, respectively.

## 3.1.1 Participation rates

Even though the labour force continued to increase, for the first time in almost a decade, the annual average participation rate (the percentage of the

population 15 years of age and over in the labour force) of women did not increase (table 3.3). From 2004 to 2005 the participation rate of women fell 0.2 percentage points to 61.8%. The participation rate of men in the workforce fluctuated over the last decade, but also decreased from 2004 to 2005, (-0.4 percentage points to 72.8%).

Participation rates tend to vary by province and by sex. Alberta had the highest participation rates for both men and women (79.2% and 66.1%, respectively) and Newfoundland and Labrador had the lowest participation rates for both men and women (63.3% and 54.4%). (Chart 3.2)

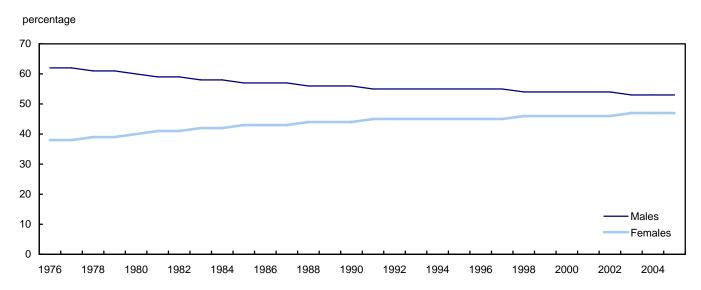

### 3.1.2 Self-employment

From 2004 to 2005, 58,200 more people worked for themselves, increasing the number of self-employed workers by 2.4% to 2.5 million. The number of self-employed females grew by 3.2% to 866,000, regaining all the ground lost since 2001 when it fell by 7.4%. The number of self-employed males increased for the third year in a row (1.9%) to 1.6 million. In 2005, the number of self-employed for both men and women attained a 30-year high.

### 3.1.3 Unemployment

The number of unemployed people dropped 1.235 million bν 63.000 people from in 2004 to 1.173 million in 2005. Unemployment rates declined for both sexes: the number of unemployed for men was down 5.3%, whereas for women it was down by 4.7%. The level of unemployment also declined for those aged 15 to 24 years (-7.8%) and for adults 25 years and older (-3.8%).

Source(s): Labour Statistics Division, Labour Force Historical Review on CD-ROM, catalogue no. 71F0004X and CANSIM table 282-0002.

## 3.2 Employment by industry

As expected, employment growth varied widely by industry. From 2004 to 2005 the strongest rate of growth occurred in the Construction industry (7.1%), followed by the Forestry, Fishing, Mining, Oil and Gas industry (6.9%) and the Educational Services industry (6.8%). The Construction industry also had the largest growth over the longer period from 2000 to 2005 (25.8%) followed by the Business building and other support services industry (21.9%) and the Health Care and Social Assistance industry (14.6%) (table 3.2).

# 3.3 Employment by occupational category

The occupations having the largest number of workers in 2005 were Sales and Service, with 3.9 million people; Business, Finance and Administration with 2.9 million and, Trades, Transport and Equipment operators with 2.4 million (table 3.6).

From 2004 to 2005, the Processing, Manufacturing and Utilities occupations were the only ones to employ fewer workers, -5% or 56,500 in total. The largest percentage increases were in the Social Science, Education, Government Service and Religion occupations as well as Art, Culture, Recreation and Sport occupations (8.0% and 6.5%, respectively). Nonetheless, employment increased the most in the Social Science, Education, Government Service and Religion (99,900) as well as the Natural and Applied Sciences and related occupations (57,000).

### 3.4 Personal income

Personal income is another indicator of economic prosperity. In 2005, personal income in Canada rose to over one trillion dollars - an increase of \$355.6 billion over the last ten years (table 3.8). Wages and salaries accounted for two-thirds of personal incomes, 67%; followed by current transfers from government, 13.1%; interest, dividends and miscellaneous investment income, 11.1%; and unincorporated business net income, 8.4%. Current transfers from corporations and non-residents combined made up just 0.4% of total personal income in 2005.

Personal disposable income grew 4.2% to \$787.5 billion in 2005, an increase of \$31.6 billion

from 2004 (table 3.9). Personal disposable income was highest in Ontario at \$316.9 billion and in Quebec at \$170.6 billion. Provincially, personal disposable income was lowest in the Atlantic Provinces. Prince Edward Island had a personal disposable income of \$2.8 billion whereas Newfoundland and Labrador realized \$10.4 billion in 2005.

Per capita, disposable income at the national level in 2005 was \$24,382, a 3.2% increase from 2004 (table 3.10). Per capita personal income was highest in the Northwest Territories at \$35,860, in the Yukon at \$34,548 and Nunavut at \$29,400. Provincially, per capita personal disposable income was highest in Alberta, \$29,520, and Ontario, \$25,230, and lowest in the Atlantic Provinces. Newfoundland and Labrador's per capita disposable income was the lowest at \$20,179 but it was only slightly higher in Prince Edward Island at \$20,594 and in New Brunswick at \$21,505.

From 2004 to 2005, per capita disposable income growth varied from region to region (table 3.10). The territories had the largest increases: 7.4% for Northwest Territorians, 7.3% for Yukoners and 5.1% for the Nunavummiut. Albertans and Nova Scotians realized the largest growth at 6.4% and 4.0% respectively, for the provinces. Prince Edward Islanders experienced the lowest level of per capita disposable income growth at just 2.2%; followed by Manitobans at 2.3% and Ontarians at 2.3%.

# 3.5 Average weekly earnings by industry

In depth information on the total number of paid employees, payrolls and hours at detailed industrial, provincial and territorial levels is available from the Survey of Employment, Payrolls and Hours (SEPH). It can be seen from this survey that the Information and Cultural Industries and the Accommodation and Food Services industry posted the highest growth rates in average weekly earnings in 2005, 5.9% for both (table 3.13). Nonetheless, workers in the Accommodation and Food Services industry still earned the least of any industry, only \$311.60 per week.

The Mining and Oil and Gas Extraction industry had the highest average weekly earnings for the fifteenth year in a row at \$1,309.65 and posted a growth rate of 4.9%. The Utilities industry had the second highest average

weekly earnings at \$1,065.65, but the lowest growth rate in 2005 (0.4%).

## 3.6 Average market income

Average after-tax income rose for most Canadian families in 2004 as strong economic growth fostered gains in employment which in turn boosted market income, according to new data from the Survey of Labour and Income Dynamics (SLID). The average market income for families increased from \$66,300 in 2003 to \$68,100 in 2004 (table 3.16). Similarly, the average after-tax income for

families increased from \$61,100 to \$62,700. Average market income for unattached individuals remained unchanged from 2003 to 2004 at \$25,800, as did after-tax income for this group, \$26,000.

For the first time since 1993, families in Alberta (\$69,500) have surpassed families in Ontario (\$69,300) for having the highest after-tax income (table 3.17). Average after-tax incomes were lower in the Atlantic Provinces, ranging from \$47,000 in Newfoundland and Labrador to \$53,000 in Nova Scotia. The average after-tax income for Quebec families was \$55,800—well below the national average (\$62,700).

## Section 4

### Consumer expenditures

Consumer expenditures reached \$663.6 billion in 2005, up 3.9% or \$24.8 billion from 2004 (table 4.1). Personal spending on services in 2005 accounted for 53.4% of total spending on consumer goods and services, non-durable goods accounted for 22.1%; durable goods, 15.5%; and semi-durable goods, 9.2%.

Among the type of goods consumed, the largest increases from 2001 to 2005 occurred for Drugs and pharmaceuticals (33.3%), Household appliances (32.5%) and Recreational, sporting and camping equipment (32.0%).

In regards to spending on services, expenditures increased the most on the following categories: Educational and cultural services (16.6%), Financial and legal services (16.1%) and Other auto related services (15.2%), from 2001 to 2005.

Among the provinces, Alberta, British Columbia and Ontario reported the greatest per capita spending on consumer goods and services in 2005. Albertans spent on average \$11,180 on goods and \$11,768 on services, British Columbians spent \$9,322 on goods and \$12,405 on services and Ontarians spent \$9,468 on goods and \$11,761 on services. The Canadian average was \$9,622 for goods and \$10,971 for services (table 4.2).

# 4.1 Consumer expenditures on energy

Consumers spent 3.4% less in 2005 than in 2004 on 'other fuels" - oil, propane, wood, coal and other fuels used for cooking and heating. Spending on electricity increased by 3.0% during this same time

period. After a decrease of 2.0% from 2003 to 2004, expenditures on Natural gas decreased a further 0.3% from 2004 to 2005.

### 4.2 Average expenditures per household

In 2004, average household expenditures in Canada totalled \$63,636. The highest expenditures were reported by households in Ontario (\$71,583) and Alberta (\$71,256). Households in Newfoundland and Labrador spent the least, \$49,867 (table 4.4).

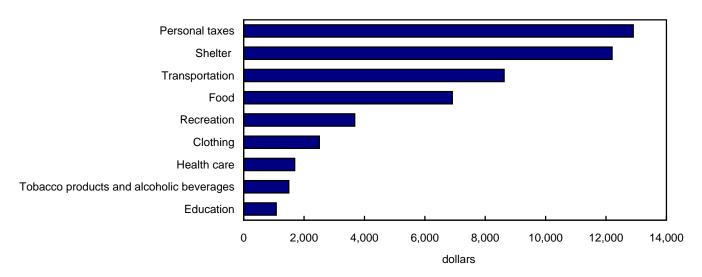

Of the types of expenditures, personal taxes (federal and provincial income taxes) remain at the top of the list for Canadian households (\$12,902 on average). The other major areas of household spending were, on average: shelter, \$12,200; transportation, \$8,626; and food, \$6,910 (chart 4.1).

### 4.3 Alcoholic beverage sales

On average, in 2005, each Canadian aged 15 years and older purchased 85 litres of beer, 13.7 litres of wines and 7.5 litres of spirits, respectively. Total per capita purchases of alcoholic beverages amounted to \$638.60.

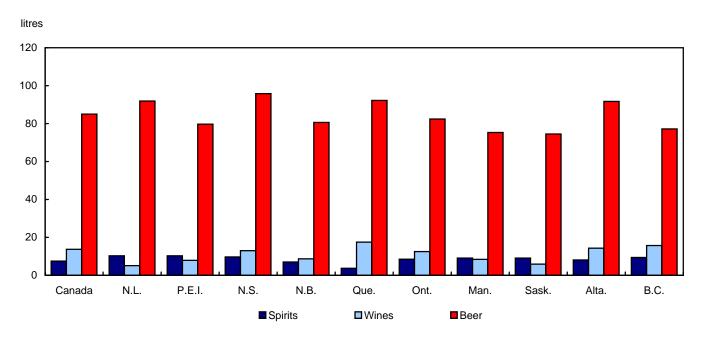

In 2005, provincially, the highest volumes of spirits sold per capita were in Newfoundland and Labrador and Prince Edward Island (10.3 litres). Wine sales were highest in Quebec (17.5 litres per capita). Beer sales were lowest in Saskatchewan at 74.5 litres while sales of wine were lowest in Newfoundland at 5.1 litres and sales of spirits were lowest in Quebec at 3.7 litres per capita (chart 4.2).

Chart 4.2 Sales of alcoholic beverages by volume and per capita 15 years and over, 2005

Source(s): Public Institutions Division, Control and Sale of Alcoholic Beverages in Canada Program (survey 1726) and CANSIM table 183-0006.

#### Note to readers

Statistics on sales of alcoholic beverages by volume should not be equated with data on consumption. Sales volumes include only sales by liquor authorities and their agents, and sales by wineries and breweries and outlets that operate under license from the liquor authorities.

Consumption of alcoholic beverages would include all these sales, plus homemade wine and beer, wine and beer manufactured through brew-on-premises operations, all sales in duty-free shops and any unrecorded transactions.

Similarly, statistics on sales of alcoholic beverages by dollar value of sales should not be equated with consumer expenditures on alcoholic beverages. The sales data refer to the revenues received by liquor authorities, wineries and breweries and these revenues include sales to licensed establishments such as bars and restaurants. The sales data do not, therefore, reflect the total amount spent by consumers on alcoholic beverages since the prices paid in licensed establishments are greater than the price paid by those establishments to the liquor authorities.

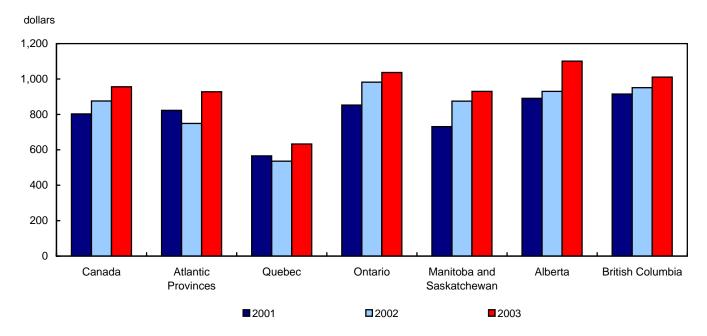

Per capita data is based on the population aged 15 and over

# 4.4 Electronic commerce: Household shopping on the internet

Canadian households spent just over \$3.0 billion shopping on the Internet in 2003 according to the Household Internet Use Survey (HIUS). Total electronic commerce (E-commerce) spending represents only a fraction of the \$686 billion in total personal expenditure in Canada in 2003; however, electronic commerce spending is rapidly growing. Household shopping on the internet increased \$1.2 billion or 68% since 2001 (table 4.8-1).

All the geographic regions studied experienced growth in electronic commerce from 2001 to 2003; however, only Ontario, British Columbia and the Atlantic provinces had lower than the average growth, 67%, 54% and 50%, respectively. Electronic commerce growth was highest in Manitoba and Saskatchewan at 97% and in Alberta at 81%. Alberta also had the highest average electronic commerce expenditures per household at \$1,101 in 2003. Ontario and British Columbia had the next highest averages at \$1,037 and \$1,011 respectively, while Quebec had the lowest at \$633 per household (table 4.9).

E-commerce: Household shopping on the internet, average expenditures

Source(s): Science, Innovation and Electronic Information Division; Household Internet Use Survey (survey 4432) and CANSIM table 358-0021.

#### **Note to readers**

The electronic commerce components of the HIUS from 2001 to 2003 were designed to capture Internet shopping from households that regularly used the Internet from various locations, solely for household purposes. Information was collected on the household as a whole, designated member of the household enumerated on the online shopping characteristics made by all members of the household in the previous 12 months. The HIUS was not conducted for the 2004 reference year.

For 2005, the Canadian Internet Use Survey (CIUS) was redesigned to measure the Internet shopping of individuals using the Internet from any location. More information on Internet shopping during 2005, including the number and value of orders made on-line, is available from the November 1, 2006 issue of *The Daily (http://www.statcan.ca/Daily/English/061101/d061101a.htm)*.

There are a number of *summary data tables* (http://www40.statcan.ca/l01/ind01/l3\_2256\_3817.htm?hili\_none) available on both Internet use and on Internet shopping from the Statistics Canada website.

## Section 5

## Housing and household characteristics

### 5.1 Housing

Residential construction in Canada slowed in 2005 after several years of growth, as housing starts declined to 225,000 from 233,000 units the year before (table 5.9) and more units were left in inventory (housing under construction at year end stood at 170,000 units, compared with 155,000 units at the end of 2004). Housing completions fell slightly from 216,000 to 211,000 units.

There have been significant shifts in residential construction activity before, as shown by the chart below (see chart 5.1). The surge in housing completions which spanned the late 1960s to the late 1970s corresponded with the arrival of the baby boomers at the household formation stage. The slump in the early 1980s corresponded with a period of high interest rates and 5% recession. In the late 1980s lower interest rates and pent up demand from the tail of the boomer generation pushed activity up again. The slump of the early 1990s reflected the recession of that period and the impact on demand of the smaller "bust" generation. The entry of the "echo" generation into the household formation stage of life contributed to the increase in recent years.1

Single units and apartment units together accounted for the bulk of building permits issued, over 80% each year. (The other categories were semi-detached and row housing, comprising 15% of permits, and cottages and conversions, making up the remaining 5%.) The demand for single-family dwellings exceeded that for apartments in the last three decades (see chart 5.2). The last period when more permits were issued for apartments than for single units was in the mid-1960s to mid-1970s, when the baby-boomers were leaving home to rent their first apartment. The shift to more

single unit permits from the mid-1970s corresponds with the movement of boomers into home-ownership.

### 5.2 Household characteristics

#### 5.2.1 Household size

The majority of Canadian households comprised just one or two people in 2001 (table 5.1). Nunavut was notable among the provinces and territories for having the highest proportion of households (19%) with 6 or more people, and fully half were households with 4 people or more. There are more children in Nunavut households, as the population of the territory is preponderantly Inuit and 2 out of 5 Inuit are under the age of 14, compared with 1 out of 5 in the non-Aboriginal population. (See the Census analytical article on the Inuit at <a href="http://www12.statcan.ca/english/census01/products/analytic/companion/abor/groups3.cfm">http://www12.statcan.ca/english/census01/products/analytic/companion/abor/groups3.cfm</a>) At the other end of the spectrum, Quebec had the highest proportion of single-person households at 30%.

Quebec also had by far the largest proportion of households living in apartments, 47%, compared with a 26% average for the rest of Canada. British Columbia, with 30%, was the province with the next highest share of apartments (table 5.7). Newfoundland and Labrador had the fewest households living in apartments (12%).

## 5.3 Communication services and electronic technology

A growing demand for communication services and electronics has increased the number of cell phones, DVD players and computers with high speed internet access in Canadian households.

The number of Canadian households with a cell phone grew from 52% in 2002 to 59% in 2004 (table 5.6). Sixty-nine % of households in Alberta and 65% in Ontario owned a cell phone compared to a low of 47% in Prince Edward Island and Quebec (table 5.7).

Thomas, Derrick. 2005. "Socio-Demographic Factors in the Current Housing Market." Vol. 18, no. 10. Canadian Economic Observer. Statistics Canada catalogue no. 11-010-X. (accessed September 22, 2006).

Nevertheless, the number of Canadians who relied on a cell phone only (no land line) was small but more than doubled: from 2% of households in May 2003 to 5% in December 2005 (table 5.14). Comparing provinces, Newfoundland and Labrador, New Brunswick and Saskatchewan had fewer households relying on cell phones only at 2% to 3%; Alberta and British Columbia had more, at 6% and 7%.

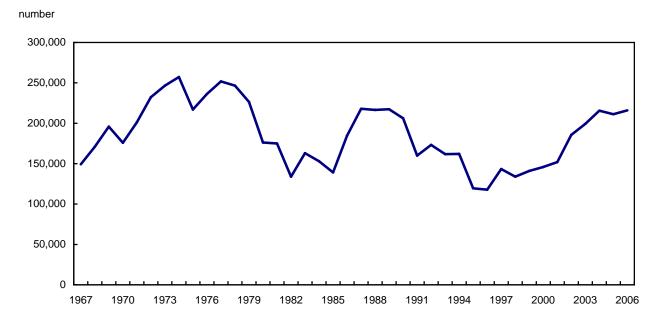

Canadian households continue to enjoy their home entertainment systems. The number of households with a DVD player increased from 36% in 2002 to 68% in 2004. The number of video cassette recorders (VCRs) fell only slightly in this time period from 92% to 90%.

In 2004, 69% of households had a home computer and 60% had internet use. The percentage using a

regular telephone connection to the internet dropped from 25% in 2002 to 16% in 2004. Accordingly, high-speed telephone connection increased from 14% to 21% and cable connection increased from 15% to 22%.

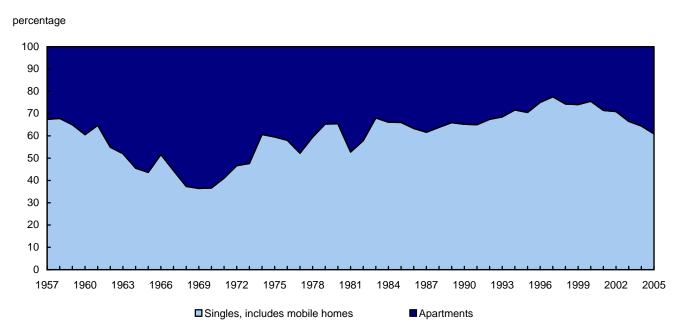

Household shopping using the internet has varied acceptance. In 2003, 30% of households bought books, magazines and newspapers online, but only 2% bought food, condiments or beverages through the internet. The largest growth for purchasing using the internet occurred for travel arrangements which grew from 16% to 22% from 2001 to 2003. (See table 5.16-3)

## Section 6

# Macroeconomic and financial statistics

The Canadian economy produced an output worth \$1.37 trillion in 2005 (table 6.1). Real GDP grew by 2.9% against a backdrop of solid continental and world economic growth, high commodity prices and stable domestic inflation, dampened by an appreciating Canadian dollar and rising interest rates. Canada currently enjoys the 15th year of uninterrupted economic expansion since the last recession ended in 1991.

The domestic economy was the engine of growth during the immediate past, as well as over a five year horizon (2001-2005, table 6.2). Domestic demand expanded by 4.3% in 2005, and by a cumulative 16.2% over the past five years, which was significantly faster than GDP growth over the same period (11.5%). In particular, new investment in residential housing grew three times as fast (34.6%) as GDP growth. Business investment expanded by more than twice the rate of the economy (28.9%) during the same period. Meanwhile, strength in the domestic economy was partially offset by lower net exports. Imports in 2005 exceeded exports for the first time since 1992 in inflation-adjusted terms. The appreciating dollar offset high commodity prices sufficiently that exports grew by less than GDP (2.1%), while imports grew strongly (7.1%).

The accumulated wealth of households, also called "net worth", reached \$4.1 trillion, or 3.8 times the GDP produced by the private sector (tables 6.1 and 6.17). Personal wealth expressed as a multiple of national income has fallen over the past five years. There are at least two reasons. First, Canadians have increased expenditures faster than income. (Inflation-adjusted consumption growth was 3.9% in 2005 and a cumulative 14.5% since 2001) (table 6.2). Second, 2005 was the first year since 2001 that real mortgage debt increased faster (4.8%) than holdings of non-financial assets (4.4%), which

includes owner-occupied housing. (Table 6.15, inflation-adjusted).

A number of economic indicators show a strong economy. Businesses reported an 11.6% return on investment, the highest since 1989 (table 6.10 and CANSIM 187-0001). Business bankruptcies have been falling for four years (table 6.17). Household spending, which makes up one half of all spending in the economy, increased faster than GDP for the fourth year. (Table 6.2).

While prices across the economy rose by a cumulative 11% between 2002 and 20051, primary metal manufacturers during this period were able to raise prices by 24%, and petroleum producers by 57%. (Table 6.11). The impact of strong commodity prices on growth is unclear. While higher commodity prices dampen consumer spending, Canada is a major world producer of commodities, and higher export earnings benefit domestic producers. Table 6.3 shows that high prices have not yet resulted in materially higher production volumes. Between 2002 and 2005, after the effects of commodity price inflation are removed, GDP in the mining and petroleum sector grew by 8.8%, the same rate as the economy. Nonetheless, optimism for continued strength in the sector is shown by investment expenditure in new capacity. Businesses that are active in mining and petroleum extraction increased capital expenditure by 17.4% last year, more than twice the rate in the overall economy (7.1%).<sup>2</sup>

Government's expenditure on public administration, which contributes just over 5% to GDP, has grown less rapidly than the economy over the past five years (7.4% vs 12.0%; table 6.3). All government outlays, which include transfer payments and interest on the public debt, have, expressed as a percentage of GDP, fallen every year for the past five years from 41.1% in 2001 to 38.4% in 2005. The main contributor to this reduction was lower interest payments, which were primarily a result of falling interest rates (tables 6.1 and 6.6-1).

<sup>1.</sup> implicit price deflator, CANSIM table 383-0008

<sup>2.</sup> Those growth rates include general price inflation.

The purchasing power of the dollar eroded by 2.2%, as measured by the Consumer Price Index (CPI) (table 6.12). The Bank of Canada has attempted to contain

inflation within a target band of 1% to 3%. Inflation has not exceeded 3% since 1992.

## International trade

## 7.1 International trade in goods

Canada's international trade surplus stayed almost unchanged at just over \$50 billion in 2005, as higher imports offset growth in commodity exports (table 7.2). Energy, raw materials and related industrial goods account for 40% of all exports from Canada. A strong global economy and the steady pace of a commodity-intensive infrastructure build-up and industrialization in Asian developing countries have shifted market conditions in favour of producers. Demand has increased faster than output capacity and since 2003 exerted a significant and sustained upward pressure on the prices for energy and base metals.

Exports rose by 2.7% in constant dollar terms in 2005 (tables 7.3 and 7.5). The strong demand and high prices for crude oil increased the value of energy exports by 25% despite the first decline in crude oil production in six years (-2.3%). Canada is both an exporter and importer of crude oil, but production more than covers domestic demand. Canada exports about 20% of its net oil production.

Higher commodity prices have raised global demand for the Canadian dollar and strengthened the exchange The higher dollar acts as a headwind to other Canadian export industries, which reduces international competitiveness unless ways are found to lower production costs by improving productivity. Several sectors important to the economy have experienced export declines in 2005. Automotive products, important to Ontario's economy and accounting for 20% of all Canadian exports, fell by 5.3% (table 7.5). The export of forest products, which is important to regional economies in several provinces, fell by 10%, with the softwood lumber dispute with the United States, amongst other issues, a contributing factor. Export of consumer goods, where competition from rising Asian economies is fierce, fell by 4%.

In 2005, 60% of all imports originated from the NAFTA trading block (Mexico, USA); 12% in the European Union (EU) and 8% in China. The remaining 20% of imports came from other parts of the world (tables 7.4 and 7.6).

For in-depth information on Imports and Exports of goods, please consult our free publication, "International Merchandise Trade Annual Review".<sup>3</sup>

### 7.2 International trade in services

Canadians have traditionally spent more money travelling abroad than foreign travellers spend in Canada (table 7.12). The travel deficit was \$5.8 billion in 2005 and is growing partly because of the strengthening exchange rate. In addition, Canadians spent \$5.9 billion more on foreign-owned transportation services than foreigners spent on Canadian-owned transportation services. One contributor is travel-related transportation expenses, the other is linked to the international shipment of goods, where Canadian exporters use foreign-owned shipping companies.

For in-depth information on Imports and Exports of services, please consult our free publication, "Canada's International Trade in Services" 4 and "International Travel".5

All percentage growth in this section is presented in constant dollar terms; that is in volume-of-production terms after the effects of general price inflation have been removed. The deflator used is the broadest economy-wide measure of inflation available, the implicit GDP price index, which estimated inflation running at 3.1% in 2005.

Special transactions is a standard statistical category of goods which covers items not allocated to another commodity grouping and whose source is customs records.

The inland freight and other balance of payments adjustments cover balance of payments adjustments, notably inland freight, not allocated to specific commodities. The addition of inland freight results in a total goods figure valued at the customs frontier of the exporting country.

# Section 8

# **Business and industry statistics**

#### 8.1 Retail sales

In 2005, Canadian consumers dipped into their savings to finance growth in consumption for the first time in 25 years. Consumer expenditures in 2005 exceeded disposable income by \$1.5 billion. Expenditures at retail stores increased by 3.9% in 2005, more than twice the rate of growth in disposable income (1.8). Just over one third of all spending at retail stores is related to the automobile. Purchases of new cars (3.4%) and used cars (3.1%) increased more modestly than spending on gasoline (12.9%), where consumers faced higher prices at the pump. Spending increases were most pronounced in the booming home renovations sector (7.5%) (table 8.5).

#### 8.2 New motor vehicle sales

Consumers bought over 1.6 million vehicles at an average price of \$32,210 in 2005. Cars and vehicles such as vans and trucks built in North America increased market share slightly from 76% to 76.5%, but the penetration of North American manufactured vehicles is still markedly lower compared to 2000 (82.5%) (table 8.8).

#### 8.3 Accommodation services

About 15,600 hotels, motels and other accommodation service providers generated \$13.2 billion in revenue in 2004. The industry became more concentrated, as

the number of establishments dropped by 4.5%, yet inflation-adjusted revenues rose by 5.3% (tables 8.15 and 8.16).

## 8.4 Computer systems design

The Computer Systems Design industry has been experiencing meaningful growth. The number of active establishments increased from 45,377 in 2003 to 51,230 in 2004, an increase of 12.9%. Total operating revenues were \$20.7 billion in 2004, an increase of 7.8% over 2003 after inflation. As well, salaries, wages and benefits increased by 14.5% after inflation to \$9.2 billion. Nonetheless, pricing power appears to be limited, as shown by a falling operating margin (4.6% in 2004, compared to 5.8% in 2003) (tables 8.17 and 8.26).

# 8.5 Internet service providers

About 460 firms with 6,400 employees generated \$1.7 billion in revenues in 2004. Providing internet service is a growth industry. Revenues grew by 7.0% in 2004, after adjusting for inflation. The average salary was just over \$63,000 (table 8.27).

Dial-up service continues to lose market share in favour of broadband access. Revenue from the provision of dial-up service fell to 23% in 2004, down from 40% in 2002. Broadband accounted for 53% of revenue, and other services (such as website hosting, advertising revenue) for the remainder (table 8.28).

### 8.6 Architectural services

There were approximately 4,700 establishments offering architectural services across Canada in 2004, who together generated \$1.9 billion in revenue. Operating margins have been stable over the past few years at 15% to 16% (tables8.18, 8.19 and 8.29).

Statistics Canada. n.d. table 384-0012. Sources and disposition of personal income, provincial economic accounts, annual (dollars), CANSIM (database). Version updated September 27, 2006. (accessed September 27, 2006).

All percentage growth in this section except for waste management analysis is presented in constant dollar terms; that is in volume-of-consumption terms after the effects of general price inflation have been removed. The deflator used is the Consumer Price Index, which estimated inflation running at 2.2% in 2005.

## 8.7 Engineering services

Engineering service providers generated 7.7% more revenue in 2004 than in 2003 after adjusting for inflation. There were just under 21,000 establishments in the industry and the profit margin was approximately 10% to12% (tables 8.18, 8.19 and 8.30).

### 8.8 Home centre and hardware stores

Home centres and hardware stores have been a growth industry for several years, including in 2005 when Canadians spent 7.4% more than in 2004 in these stores. Since 2001, home centre revenues have risen by 61% in inflation-adjusted terms (table 8.6).

## 8.9 The waste management industry

The waste management industry provides a comprehensive range of services: the collection and transportation of waste and materials destined for recycling (including composting) or re-use; the operation of non-hazardous and hazardous waste disposal facilities; the operation of transfer stations; the operation of recycling facilities; and the treatment of hazardous waste.

Waste management services cost municipal governments more than \$1.5 billion in 2002. In total, the nation produced just over 30.4 million tonnes of solid waste from all sources, such as residential, industrial, commercial, institutional, construction and demolition. This amounted to 971 kg per person on average (table 8.38).

Changes in society, such as the trend toward fewer people per household, also have an impact on waste production. Census data show that in 1981 households consisting of one or two people represented 49% of all households; by 2001, they accounted for 58%. All households, regardless of size or composition, consume certain basic goods such as furniture, appliances, newspapers and other products. When there are fewer members in each household to share these goods, per capita consumption and waste generation tend to go up.

In 2002, 6.6 million tonnes of non-hazardous waste materials were prepared for recycling by local waste management organizations and companies. The Canadian average was 211 kg per person.

# 8.10 Environmental protection expenditures

Statistics Canada collects data on the capital and operating expenditures made by businesses to comply with environmental regulations, conventions or voluntary agreements. The Survey of Environmental Protection Expenditures also collects information on environmental management practices and the use of environmental processes and technologies to prevent, abate or control pollution.

Canadian companies have substantially increased their spending to protect the environment; capital expenditures to protect the environment increased 35% to \$2.9 billion in 2002. Approximately \$5 from every \$100 that businesses spent on capital projects was for the purpose of protecting the environment.

Much of the increase in capital expenditures was as a result of investments in pollution prevention equipment (processes that eliminate or prevent the creation of pollution in the production cycle), which grew to \$1.4 billion in 2002. The other major area of capital expenditures was in pollution abatement and control systems and equipment (\$900 million). These treat pollution and wastes after they have been created.

The greatest increase in capital spending from 2000 to 2002 occurred in the petroleum and coal products industry. Firms invested in refinery upgrades in order to meet new sulphur reduction regulations, which came into effect in July 2002.

The electric power generation, transmission and distribution industry also reported a large increase in capital spending in 2002. These expenditures occurred as utility companies invested in alternative energy facilities (for example, wind power, substitution to less carbon-intensive fuels) and in systems and equipment to reduce air emissions (table 8.39).

Note(s): The Monthly Restaurants, Caterers and Taverns Survey (MRCTS) has undergone several important methodological changes commencing with the April 2004 reference month. As a result of these changes, total food services sales for Canada and the provinces and territories have been revised back to January 1998. Users must be aware that historical comparisons of estimates produced by the MRCTS prior to May 2004 reference month should be made only with revised historical data. Please note that as kind of business (KOB) details' revision have been completed, next revision step will be done on locations. Consequently that detail will remain suppressed until the completion of the revision process.

<sup>1.</sup> Operating revenue excludes investment income, capital gains, extraordinary gains and other non-recurring items. Note that prior to reference year 2000, total revenue rather than operating revenue is reported. The 1999/2000 trend may be slightly distorted.

Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Due to rounding, components may not add to total (where applicable).
 Prior to 2002, data refer to code 51421 Data processing services, North American Industry Classification System (NAICS) 1997.

Total amount of non-hazardous waste disposed in public and private waste disposal facilities. This includes waste that is exported out of the source province or country for disposal. This does not include waste disposed in hazardous waste disposal facilities nor waste managed by the waste generator on site.

Note(s): Figures may not add up to totals due to rounding.

Source(s): Environment Accounts and Statistics Division, Waste Management Industry Survey: Business Sector (survey 2009) and Waste Management Industry Survey: Government Sector (survey 1736) and Waste Management Industry Survey: Business and Government Sectors, 2002, catalogue no. 16F0023X.

This information covers only those companies and local waste management organizations that reported they prepared non-hazardous materials for recycling.

Includes administrative data for businesses that were below the survey threshold for inclusion.

Includes only those revenues and expenditures related to waste management activities.

Includes revenues collected specifically for waste management purposes by local governments and other public waste management organizations that provided waste management services in 2002. They do not include general municipal tax revenues.

Includes current expenditures directed toward waste management services.

Waste disposal and diversion quantity figures are derived from the results of surveys conducted by the province.

## Section 9

# Census metropolitan areas and census agglomerations

A census metropolitan area (CMA) and a census agglomeration (CA) are urban areas that are economically and socially integrated. As of July 1st, 2005, six CMAs had a population of over 1 million (table 9.1). These six CMAs alone included 45% of the total population of Canada. Toronto is the largest, with 5.3 million people. The smallest CA, Labrador City, registered a count of just under 10,000 people in the 2001 Census (table 9.28).

CMAs and CAs are formed by merging adjacent municipalities centred on a large urban area. The census population count of the urban core must be at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs can straddle provincial boundaries; for example, Ottawa-Gatineau is formed by neighbouring municipalities some of which are in Ontario and others in Quebec.

#### 9.1 Households

Households in different CMAs and CAs have much in common, but display some differences in characteristics such as size and age composition, income and spending patterns, and social and cultural characteristics.

The proportions varied from city to city, but on average about two thirds of all households were single-family households and nearly one third were non-family households as of the 2001 Census. (A non-family household consists either of one person living alone or of two or more persons who share a dwelling, but do not constitute a family. A multiple-family dwelling

is one shared by two or more families.) Only 2% of households in the CMAs are multi-family. (Table 9.6)

The stage in the life cycle is a factor in determining what households spend their budget on – for example seniors' households spend less on education, while new homeowners spend more on household furnishings and equipment. Table 9.9 gives two characteristics which are helpful for gauging the proportions of households in different life stages in the urban areas from the 2001 Census: the mix of renters and owners, and the age of household maintainers. St. Catharines-Niagara Falls had the highest proportion of households (28%) with a household maintainer aged 65 or older. Victoria was second with 27% of households in this category. Households with a younger household maintainer are likelier to rent than own. Looking at all the CMAs together, on average roughly 13% of households with a maintainer under 25 years old owned their home in 2001. In contrast to the usual case, in Oshawa 23% of this group were homeowners, and in Windsor the share was 22%.

Forty-three percent of Canadian households reported some expenditure on education in 2004. The average amount spent among the selected CMAs in table 9.13 ranged from a high of \$1,768 in Toronto to a low of \$690 in Quebec. The major share of education expenditures is for post-secondary tuition and books. For Canada overall, the share was 69% of total education expenditures in 2004 (see CANSIM table 203-0012). Some of the difference between education spending between CMAs can be explained by different levels of tuition fees - for example average undergraduate tuition fees for the year 2005-2006 were \$1,900 in Quebec compared with \$4,881 in Ontario. (See "University tuition fees" in the Statistics Canada Daily of September 1st, 2005.) Part of the difference in education spending is also explained by differences in the number and size of post-secondary institutions in the CMA, and the proportion of households with members in the main age category for post-secondary studies. (Chart 9.1)

<sup>1.</sup> Canada's population was 32,270,507 on July 1st, 2005 – table 2.1

In a comparison of Canada's three largest cities, households in Vancouver spent a higher percentage of their total household expenditures on transportation (13.4%) in 2004, but less on clothing (3.9%) than households in Montreal and Toronto. Households in Toronto spent the most on shelter (20.9%) and clothing (4.2%) but the least on food (9.6%). Households in Montreal spent the most of their total household expenditures on food (12.3%) but the least on transportation (11.8%) and shelter (18.4%).

#### 9.2 Businesses

The mix of businesses is quite similar in all CMAs, with some differences in the construction, finance, business services, and health and social services industries (based on table 9.15).

Construction accounted for a high of 19% of business establishments in Abbotsford, ranging to a low of 9% in Saguenay in . Businesses in the finance and insurance industry made up between 3% and 7% of the total, with the overall average for all CMAs being 6%. Ottawa-Gatineau and Calgary had the highest proportion of establishments in the professional, scientific and technical services industry at 28% and 26% respectively; the average for all other CMAs was just 16%.

#### 9.3 The workforce

Looking at all the CMAs together, 79% of employment in 2005 was in the services-producing sector of the economy (based on table 9.10). The biggest employers were trade (16%), health care and social assistance (10%), and professional, scientific and technical services (8%). The finance, insurance, real estate and leasing industry accounted for 7% of employment; educational services also had 7%. Public administration, and the accommodation and food services industry each accounted for 6%.

Twenty-one percent of overall employment in the CMAs was in the goods-producing sector, notably in manufacturing (13%) and the construction industry (6%).

Manufacturing employed 30% of workers in Windsor, the highest share of any CMA. Kitchener came

in a close second with 25% of total employment in manufacturing. At the lower end of the range were 13 CMAs with less than 10% of all jobs in manufacturing. For the most part this is a reflection of relatively high reliance on the services-producing sector. The mix was different in British Columbia and Alberta, where the share of the services-producing sector is lower; construction in Abbotsford, Edmonton and Calgary accounted for 8% to 10% of employment, well above the 6% average for all CMAs. (Chart 9.2)

### 9.4 Property crime

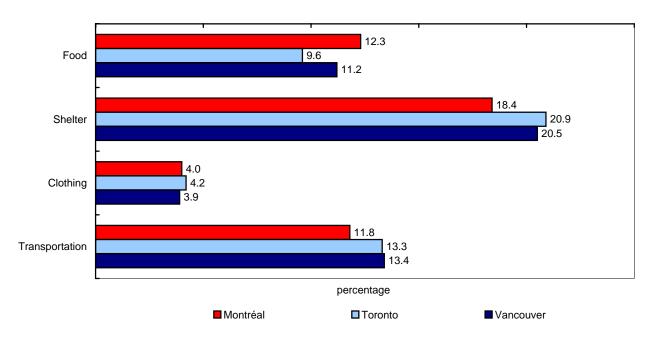

Property crimes are committed with the intent to acquire property without violence or the threat of violence. Nearly 1.2 million property crimes were reported by police in 2005, the most frequent of which were thefts, break and enters, theft of motor vehicles and fraud.

Break and enter represents the third largest offence category, accounting for 1 in 10 *Criminal Code* incidents and about 1 in 5 property crimes reported by police. The rate of break-ins decreased 7% in 2005. Among the nine largest CMAs, Ottawa, Québec and Montréal reported notable increases in breaks-ins. The rate of break-ins continued to drop in Toronto, falling 13% in 2005. Toronto's rate was the lowest among not only the largest CMAs, but all 27 CMAs in Canada. Among the smaller CMAs, Gatineau was the sole CMA to report an increase, up 3% from the previous year. Corresponding to the high rates in the province of Saskatchewan, rates of break-ins were highest in Regina and Saskatoon.

In 2005, police reported over 160,000 motor vehicle thefts. The motor vehicle theft rate was 7% lower than the rate recorded in 2004. Rates of motor vehicle theft were either down or stable in nearly all CMAs. The largest drops were in Sudbury (-34%), Sherbrooke (-26%) and Windsor (-26%). The two exceptions were Hamilton and Trois-Rivières where rates all increased. Even with a 12% drop, rates continued to be highest in Winnipeg, followed by Abbotsford. The lowest rate was recorded by Saint John.<sup>2</sup>

- 1. Taxfilers are people who filed a tax return for the reference year and were alive at the end of the year.
- Total income is income from all sources. A detailed definition of what is included in total income is available from the User's Guide to this series, available at http://www.statcan.ca/english/sdds/4105.htm.
- Median is the middle number in a group of numbers. Where a median income, for example, is given as \$26,000, it means that exactly half of the incomes reported are greater than or equal to \$26,000, and that the other half is less than or equal to the median amount. Median incomes in the data tables are rounded to the nearest hundred dollars. Zero values are not included in the calculation of medians for individuals.

Note(s): See "Data quality, concepts and methodology — Explanatory notes for the tables" section.

Source(s): Small Area and Adminstrative Data Division, Annual Estimates for Census Families and Individuals (T1 Family File) (survey 4105) and CANSIM table 111-0004.

# Section 10

# **Projections**

# 10.1 Long-term population projections

Statistics Canada estimates six sets of population growth scenarios for Canada, the provinces and the territories which take into account the current demographic trends in all components of population growth. It should be emphasized that these projections are not predictions. Rather, they represent an attempt to establish plausible long-term scenarios based on assumptions of fertility, migration and mortality, which are subject to varying degrees of uncertainty. As such, they are valuable statistical information for planners, policy makers, and the public at large interested in the future course of demographic change and related issues

A components method was used by Statistics Canada. For each component of population growth, one or more assumptions were made regarding how that component would evolve in the future. These assumptions, when combined, form a number of projection scenarios. In all, there are three assumptions each on fertility, mortality and immigration and four assumptions on interprovincial migration; in combination, these assumptions generate 108 scenarios on the future course of population change. Some of the results of projection 1: low-growth, projection 2: medium-growth which includes recent migration trends, projection 3: medium-growth which includes medium migration trends, and projection 6: high-growth, are shown in tables 10.1 to 10.2-4. For a more in-depth analysis of each growth scenario's inputs, please consult Population Projections for Canada, Provinces and Territories, catalogue no. 91-520-X.

As indicated by selected projection scenarios, Canada's population should continue to grow between now and 2031 (chart 10.1). According to the low-growth scenario, Canada's population will increase from 32.5 million in 2006 to about 36.3 million in 2031, an increase of 11.5%. The high-growth scenario's assumptions of higher fertility, higher immigration and

higher life expectancy boost the Canadian population to 41.8 million in 2031. This is 28% more than the population in 2006.

# 10.2 Short-term population projections

Using projection 3, a medium-growth scenario, short-term projections of population show an increase from 2006 to 2016 in each province and territory except for Newfoundland and Labrador (-0.8%) and Saskatchewan (-1.3%) (chart 10.2). Above the Canadian average of 8.4% growth are the Northwest Territories (12%), British Columbia (11.4%), Alberta (11.3%) and Ontario (11%).

Results may differ depending on which scenario is used due to the cumulative effects of fertility, immigration and interprovincial migration, which varies widely from province to province.

# 10.3 Canada's ageing population

Canada's population is ageing fast and senior citizens would outnumber children in about a decade, according to the latest population projections (tables 10.1 to 10.2-4).

In all six Statistics Canada growth scenarios, seniors aged 65 and over would become more numerous than children aged less than 15 around the year 2015. This would be an unprecedented situation in Canada.

By 2031, the number of people aged 65 and over would range between 8.9 million and 9.4 million, depending on the scenario selected, while the number of children would range between 4.8 million and 6.6 million.

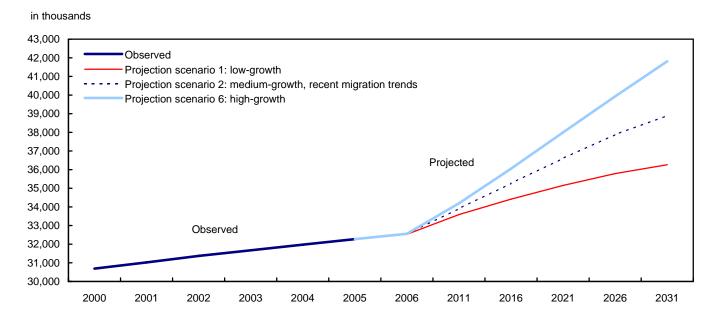

The aging of the baby boomers combined with continuing low fertility levels and increasing longevity will age the population rapidly. The arrival of baby boomers at age 65 also has implications for the work force during the coming decades.

# 10.4 Population ageing will accelerate as baby boomers reach 65

Like the decline in natural increase, the ageing of the Canadian population is inevitable, since it is largely already inherent in the age structure of the current population.

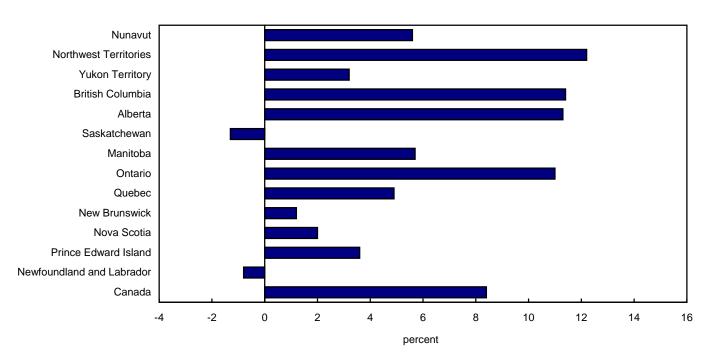

The projections show that population ageing, which has already begun, would accelerate in 2011 when the first baby-boom cohort (persons born in 1946) reaches the age of 65. This rapid ageing is projected to last until 2031, when seniors would account for between 23% and 25% of the total population. This would be almost double their current proportion of 13%.

# Explanatory notes for the tables

# Section 2

# Table 2.1, 2.2 and 2.3

Postcensal estimates are based on the latest census results adjusted for net census undercoverage and for the estimated population growth that occurred since that census. Intercensal estimates are based on postcensal estimates and data adjusted for net census undercoverage of the censuses preceding and following the considered year.

Estimates are final intercensal and unadjusted for net census undercoverage prior to July 1, 1971. Estimates are revised intercensal from July 1, 1971 to April 1, 1996, final intercensal from July 1, 1996 to April 1, 2001, final postcensal from July 1, 2001 to July 1, 2003, updated postcensal from October 1, 2003 to April 1, 2006 and preliminary postcensal from July 1, 2006.

## Table 2.4

See notes for table 2.1.

# Table 2.5

The numbers for marriages are final up to December 2002, updated from January 2003 to June 2005 and preliminary from July 2005. The numbers for births are final up to December 2003, updated from January 2004 to March 2005 and preliminary from April 2005. The numbers for deaths are final up to December 2002, updated from January 2003 to March 2005 and preliminary from April 2005. Preliminary and updated data for births, deaths and marriages were produced by Demography Division of Statistics Canada (See Definitions, data sources and methods record number 3601 for births and deaths, and 3605 for marriages). Final data for births, deaths, marriages were produced by Health Statistics Division of Statistics Canada (See Definitions, data sources and methods details record number 3231 for births, 3233 for deaths and 3232 for marriages).

# Table 2.7

Ethnic origin refers to the ethnic or cultural group(s) to which the respondent's ancestors belong. Ethnic or cultural origin refers to the ethnic "roots" or ancestral background of the population, and should not be confused with citizenship or nationality.

The category 'Total population' represents total population.

A single response occurs when a respondent provides one ethnic origin only. A multiple response occurs when a respondent provides two or more ethnic origins.

# Table 2.8

Immigration figures include only landed immigrants

 Quarterly period: Period I= January-March; Period II= April-June; Period III= July-September; Period IV= October-December.

- 2. The numbers for immigrants are final up to December 2004, updated from January 2005 to March 2006 and preliminary from April 2006.
- 3. Includes England, Lesser British Isles, Northern Ireland, Scotland and Wales.
- 4. Includes all countries in Europe other than Great Britain, France, Germany, Netherlands, Greece, Italy, Portugal and Poland.
- 5. The list of countries may be obtained by contacting Demography Division at 1-866-767-5611 or 613- 951-2320 or *demography* @statcan.ca .

#### **Table 2.10**

The numbers for emigrants are final up to June 2002, updated from July 2002 to March 2005.

The numbers for net temporary emigrants are final up to June 2002, updated from July 2002. March 2005 and preliminary from April 2005.

The numbers for returning emigrants are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005.

The numbers for net non-permanent residents are final up to June 2002, updated from July 200 to March 2005 and preliminary from April 2005.

Total net migration: Sum of international and interprovincial migration. The net represents the sum of net international and net interprovincial migration.

#### **Table 2.11**

The figures shown in the tables have been subjected to a confidentiality procedure known as **random rounding** to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures, including totals and margins, are randomly rounded either up or down to a multiple of "5". While providing strong protection against disclosure, this technique does not add significant error to the data.

The user should be aware that totals and margins are rounded independently of the cell data so that some differences between these and the sum of rounded cell data may exist.

Undergraduate enrolment comprises students in Bachelor's and first professional degree programs, diploma, or certificate programs, or non-university-type courses offered in universities.

# **Table 2.12**

See notes for table 2.11.

#### **Table 2.13**

For definitions of family and household, see appendix A: "Glossary".

# **Table 2.14**

"Families" refers to economic families, 2 persons or more.

# Family income

Family income is the sum of income of each adult in the family as defined above. Household income is likewise the sum of incomes of all adults in the household. Family and household membership is defined at a particular point in time, while income is based on the entire calendar year. The family members or "composition" may have changed during the reference year, but no adjustment is made to family income to reflect this change.

# **Economic family type**

"Economic family type" refers to either economic families or unattached individuals. An economic family is defined as a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common law or adoption. An unattached individual is a person living either alone or with others to whom he or she is unrelated, such as roommates or a lodger.

Classification of family types (see appendix A: "Glossary").

#### **Table 2.15**

See note for table 2.13.

#### **Table 2.16**

- 1. Data are from July to June.
- 2. The numbers for births are final up to 2003/2004, updated for 2004/2005 and preliminary for 2005/2006. Preliminary and updated data were produced by Demography Division, Statistics Canada (See Definitions, data sources and methods record number 3601). Final data were produced by Health Statistics Division, Statistics Canada (See Definitions, data sources and methods record number 3231).
- 3. The numbers for deaths are final up to 2002/2003, updated for 2003/2004 and 2004/2005 and preliminary for 2005/2006. Preliminary and updated data were produced by Demography Division, Statistics Canada (See Definitions, data sources and methods record number 3601). Final data were produced by Health Statistics Division, Statistics Canada (See Definitions, data sources and methods record number 3233).
- 4. The numbers for net interprovincial migrants are final up to 2004/2005 and preliminary for 2005/2006.
- 5. The numbers for immigrants are final up to 2003/2004, updated for 2004/2005 and preliminary for 2005/2006.
- 6. The numbers for emigrants are final up to 2002/2003, updated for 2003/2004 and 2004/2005 and preliminary for 2005/2006.
- 7. The numbers for net temporary emigrants are final up to 2002/2003, updated for 2003/2004 and 2004/2005 and preliminary for 2005/2006.
- 8. The numbers for returning emigrants are final up to 2002/2003, updated for 2003/2004 and 2004/2005 and preliminary for 2005/2006.
- 9. Estimates of non-permanent residents (NPRs) represent the number of NPRs living in Canada at July 1. The five following groups are referred to as NPRs: (1) persons residing in Canada claiming refugee status; (2) persons residing in Canada who hold a study permit; (3) persons residing in Canada who hold a work permit; (4) persons residing in Canada who hold a Minister's permit; (5) all non-Canadian born dependants of persons claiming refugee status, or of persons holding study permits, work permits or Minister's permits and living in Canada.

10. The numbers for net non-permanent residents are final up to 2002/2003, updated for 2003/2004 and 2004/2005 and preliminary for 2005/2006.

#### **Table 2.17**

As of 2001, census family was defined as: a married couple (with or without children of either or both spouses), a couple living common-law (with or without children of either or both partners) or a lone parent of any marital status, with at least one child living in the same dwelling. A couple living common-law may be of opposite or same sex. "Children" in a census family now include grandchildren living in the same household of either grandparent, where there are no parents present (**2001 Census Dictionary**, catalogue 92-378-X, page 133). However, since it is impossible to establish trends with regard to the increase of same-sex couples, this group has been excluded in the estimation of census families.

# Section 3

## Table 3.1

- 1. Number of civilian, non-institutionalized persons 15 years of age and over who, during the reference week, were employed or unemployed. Estimates in thousands, rounded to the nearest hundred.
- 2. Full-time employment consists of persons who usually work 30 hours or more per week at their main or only job. Estimates in thousands, rounded to the nearest hundred.
- 3. Part-time employment consists of persons who usually work less than 30 hours per week at their main or only job. Estimates in thousands, rounded to the nearest hundred.
- 4. Those who work for a local, provincial or federal government, for a government service or agency, a crown corporation, or a government funded establishment such as a school (including universities) or hospital.
- 5. Those who work as employees of a private firm or business.
- 6. The participation rate is the number of labour force participants expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status) is the number of labour force participants in that group expressed as a percentage of the population for that group. Estimates are percentages, rounded to the nearest tenth.
- 7. The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status) is the number unemployed in that group expressed as a percentage of the labour force for that group. Estimates are percentages, rounded to the nearest tenth.

Labour force statistics are based on a sample of roughly 54,000 households, which is representative of the total population 15 years of age and over residing in Canada, excluding residents of the Yukon and Northwest Territories; persons living on Indian reserves; inmates of institutions; and full-time members of the Armed Forces.

# Table 3.2

This data is based on the North American Industry Classification System (NAICS) 2002.

See notes for table 3.1.

#### Table 3.3

See notes for table 3.1.

#### Table 3.4

See notes for table 3.1.

#### Table 3.5

The data come from the Survey of Employment, Payrolls and Hours, which measures month-to-month trends in employment levels, hours of work and earnings. These data are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

#### Table 3.6

This data is based on the National Occupational Classification – Statistics (NOC-S) 2001 - Canada.

#### Table 3.7

For definitions of National Accounts concepts, see appendix A: "Glossary".

#### Table 3.8

Sum of accrued net income of farm operators from farm production and net income of non-farm unincorporated business, including rent.

For definitions of National Accounts concepts, see appendix A: "Glossary".

#### Table 3.9

For definitions of National Accounts concepts, see appendix A: "Glossary".

Canada totals in the provincial economic accounts (PEA) do not correspond to the national income and expenditure accounts (IEA) estimates at certain times of the year. Preliminary PEA estimates produced each spring are benchmarked to the IEA's initial (fourth quarter) release. The IEA's annual revisions, released later each spring, result in a discrepancy between the estimates. The PEA are brought back in line when the IEA's annual revisions are incorporated each fall.

#### **Table 3.10**

Canada totals in the provincial economic accounts (PEA) do not correspond to the national income and expenditure accounts (IEA) estimates at certain times of the year. Preliminary PEA estimates produced each spring are benchmarked to the IEA's initial (fourth quarter) release. The IEA's annual revisions, released later each spring, result in a discrepancy between the estimates. The PEA are brought back in line when the IEA's annual revisions are incorporated each fall.

For definitions of National Accounts concepts, see appendix A: "Glossary".

Population estimates as of July 1st of every year.

#### **Table 3.11**

The data in this table are based on income tax returns for the tax year.

Some taxfilers have no income but file for other reasons, such as to claim a Child Tax Benefit. For those taxfilers (and non-filing spouses) reporting some income, medians and a distribution of income are given.

Persons not filing income tax returns include most children and many elderly (mainly those who receive only Old Age Security and Guaranteed Income Supplement).

#### **Table 3.12**

Other income consists of investment income, government transfers, private pension, income and miscellaneous income.

#### **Table 3.13**

Earnings includes employment income and net income from self-employment.

# **Tables 3.16 and 3.17**

"Families" refers to economic families, 2 persons or more.

## Family income

Family income is the sum of income of each adult in the family as defined above. Household income is likewise the sum of incomes of all adults in the household. Family and household membership is defined at a particular point in time, while income is based on the entire calendar year. The family members or "composition" may have changed during the reference year, but no adjustment is made to family income to reflect this change.

# **Economic family type**

"Economic family type" refers to either economic families or unattached individuals. An economic family is defined as a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common law or adoption. An unattached individual is a person living either alone or with others to whom he or she is unrelated, such as roommates or a lodger.

Classification of family types (see appendix A: "Glossary").

# Section 4

# Table 4.2

Canada totals in the Provincial Economic Accounts (PEA) do not correspond to the national Income and Expenditure Accounts (IEA) estimates at certain times of the year. Preliminary PEA estimates produced each spring are benchmarked to the IEA's initial (fourth quarter) release. The IEA's annual revisions, released later each spring, result in a discrepancy between the estimates. The PEA are brought back in line when the IEA's annual revisions are incorporated each fall.

#### Table 4.4

In 1998, 1999, and every second year thereafter starting with 2001, statistics for Canada include the territories. For the other years, Canada-level statistics include the 10 provinces only.

#### Table 4.6

These data represent food and nutrients available for consumption. They do not represent actual quantities consumed because they do not allow for losses, such as waste and/or spoilage, in stores, households, private institutions or restaurants or losses during preparation.

#### Tables 4.7-1 to 4.7-13

The per capita sales of the Northwest Territories and Nunavut are combined since the distribution centre in Nunavut is not representative of all sales of the territory.

Per capita values may not add due to rounding (total products).

Data may not add to the total due to rounding.

Imported beer is estimated.

Total alcoholic beverages by volume (litres) for the three major categories is not shown. It is not advisable to add volumes of the three major different types of alcoholic beverages since their alcohol content varies substantially.

Users should use total volume (litres) for each of the three categories presented with caution as the alcohol content may differ from one product to another within the same category.

# Section 5

## Table 5.1

Private household refers to a person or group of persons (other than foreign residents) who occupy a private dwelling and do not have a usual place of residence elsewhere in Canada. The number of private households equals the number of occupied private dwellings.

## Table 5.2

Spending 30% or more of household income on housing costs:

It should be noted that not all households spending 30% or more of incomes on shelter costs are necessarily experiencing housing affordability problems. This is particularly true of households with high incomes. There are also other households who choose to spend more on shelter than on other goods. Nevertheless, the allocation of 30% or more of a household's income to housing expenses provides a useful benchmark for assessing trends in housing affordability.

The relatively high shelter cost to household income ratios for some households may have resulted from the difference in the reference period for shelter cost and household income data. The reference period for shelter cost data (gross rent for tenants, and owner's major payments for owners) is 2001, while household income is reported for the year 2000. As well, for some households the 2000 household income may represent income for only part of a year.

# Table 5.3

See notes for table 5.2.

#### Table 5.4

See notes for table 5.1.

#### Table 5.9

1. As at the end of the period shown.

The Starts and Completions Survey is carried out monthly in urban areas with populations in excess of 50,000 as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of each quarter (that is, four times per year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completion activity in these quarterly locations are statistically estimated at a provincial level for single and multiple categories. Centres with populations below 10,000 are enumerated on a simple basis, also in the last month of each quarter (that is, in March, June, September and December).

Mobile Homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory, then moved to a foundation before it is occupied.

## **Table 5.10**

Single-detached and mobile homes are included in this category.

The Building and Demolition permits monthly survey covers 2,380 municipalities representing 95% of the population. The results of the Building Permits Survey are often used as a leading indicator of building activity, but should not be construed as representing total construction activity in the country.

The Building permits survey covers all Canadian municipalities that issue permits. The number of Canadian municipalities currently surveyed exceeds 2,350, representing all the provinces and territories. They account for 95% of the Canadian population. Historically, the data are not strictly comparable due to the continuing improvement in coverage and the modifications to the geographical areas required to reflect the most recent census definitions.

#### Tables 5.16

E - Low reliability estimate due to sample size and coefficient of variation between 16.6% and 33.3%.

All households include any person or group of persons living in a dwelling. A household may consist of any combination of one person living alone, one or more families or a group of people who are not related but who share the same dwelling. Data in the table refers to the total number of all households in Canadian provinces.

Regular use households that responded "yes" to the question, "In a typical month, does anyone in the household use the Internet from any location?".

# Section 6

# Table 6.5

Canada totals in the Provincial Economic Accounts (PEA) do not correspond to the national Income and Expenditure Accounts (IEA) estimates at certain times of the year. Preliminary PEA estimates produced each spring are benchmarked to the IEA's initial (fourth quarter) release. The IEA's annual revisions, released later each spring, result in a discrepancy between the estimates. The PEA are brought back in line when the IEA's annual revisions are incorporated each fall.

# Table 6.6

Data are based on estimates of government revenues and expenditures in accordance with national account concepts.

In GDP, government current expenditure is recorded on a net basis, that is, after deduction of sales of goods and services. For government revenue and expenditure, sales of goods and services to other sectors are shown separately as part of revenue, and current expenditure is recorded on a gross basis, which leaves saving unchanged.

## Table 6.7

- 1. Most recent 2 years of data are preliminary actuals and intentions.
- 2. Repair exependitures are not collected in the Preliminary Actual and Intentions Survey.

The estimates cover total outlays for construction and for the acquisition of machinery and equipment by Canadian business, institutions and governments, together with expenditures for housing.

#### Table 6.8

- 1. Most recent 2 years of data are preliminary actuals and intentions.
- Repair exependitures are not collected in the Preliminary Actual and Intentions Survey.

See notes for table 6.7.

#### Table 6.9

- 1. Oil and gas extraction and support activities combines the NAICS codes 211 and 213.
- 2. Repair, maintenance and personal services combines the NAICS codes 811 and 812.

Starting with the 1st quarter 2004 release, an updated version of the North American Industry Classification System (NAICS 2002) and a new set of industry aggregations were introduced to the Quarterly Survey of Financial Statistics for Enterprises. The previous set of industrial aggregations consisting of 157, 58 and 24 groups have been replaced by a new set of 67, 48 and 22 industry groups and a group of 10 financial instruments. Historical series for the new aggregations are now available.

#### **Table 6.10**

- 1. Oil and gas extraction and support activities combines the NAICS codes 211 and 213.
- 2. Repair, maintenance and personal services combines the NAICS codes 811 and 812.

Starting with the first quarter of 2004, an updated version of the North American Industry Classification System (NAICS 2002) and a new set of industry aggregations have been introduced to the Quarterly Survey of Financial Statistics for Enterprises. The previous set of industrial aggregations consisting of 157, 58 and 24 groups have been replaced by a new set of 67, 48 and 22 industry groups and a group of 10 financial instruments. Historical series for the new aggregations are now available

# **Table 6.11**

The indexes measure price movements for shipments by manufacturing industries, including intermediate goods shipped between different manufacturing industries.

The Industrial Product Price Index, by industry has changed from the 1980 Standard Industrial Classification to the 1997 NAICS classification which resulted in a change in data as well as a change in some of the stubs.

The annual average for 2005 is still preliminary until June 2006.

## **Table 6.12**

The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil", "gasoline", and "fuel parts and supplies for recreational vehicles".

The consumer price index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2001. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements. Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

The consumer price index (CPI) is not a cost-of-living index, though people frequently call it this. The objective behind a cost-of-living index is to measure changes in expenditures necessary for consumers to maintain a constant standard of living. The idea is that consumers would normally switch between products as the price relationship of goods changes. If, for example, consumers get the same satisfaction from drinking tea as they do from coffee, then it is possible to substitute tea for coffee if the price of tea falls relative to the price of coffee. The cheaper of the interchangeable products may be chosen. We could compute a cost-of-living index for an individual if we had complete information about that person's taste and spending habits. To do this for a large number of people, let alone the total population of Canada, is impossible. For this reason, regularly published price indexes are based on the fixed-basket concept rather than the cost-of-living concept.

The consumer price index (CPI) compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 1992=100. The official time base was changed from 1986=100 to 1992=100 starting with the CPI for January 1998. The change is strictly an arithmetic conversion, which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

The consumer price index (CPI) maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In January 2003, the basket reflecting the 2001 expenditure patterns replaced the 1996 basket. In July 2004, the 2001 basket weights have been adjusted; the weights for mortgage interest cost having been re-evaluated since the basket updating in January 2003. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets. The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from survey of household spending data. When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see publication 62-553 The Consumer Price Index Reference Paper.

For concepts and definitions, see publication 62-557 Your Guide to the Consumer Price Index, or publication 62-553 The Consumer Price Index Reference Paper. Additional information can also be obtained from: Client Services Unit, Prices Division, telephone: 613-951-9606, toll-free: 1-866-230-2248, fax: 613-951-1539, e-mail: *prices-prix@statcan.ca*.

The population targeted by the consumer price index (CPI) consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Previous to January 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

The relatively small size of the housing market in these two cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for rented accommodation, and owned accommodation are not published for these two cities. Further, the all-items indexes published for these two cities are not strictly comparable with the same indexes for the provinces or the other sixteen urban centres.

The goods and services that make up the consumer price index (CPI) are organized according to a hierarchical structure with the "all-items" index as the top level. Eight major components of goods and services make up the "all-items" index. They are: "food", "shelter", "household operations and furnishings", "clothing and footwear", "transportation", "health and personal care", "recreation, education and reading", and "alcoholic beverages and tobacco products". These eight components are broken down into a varying number of sub-groups which are in turn broken down into other sub-groups, etc. Indents are used to identify the components that make up each level of aggregation. For example, the eight major components appear with one indent relative to the "all-items" to show that they are combined to obtain the "all-items". NOTE: Some items are recombined outside the main structure of the CPI to obtain special aggregates such as "all-items excluding food and energy", "energy", "goods", "services", and "fresh fruit and fresh vegetables". They are listed after the components of the main structure of the CPI following the last major component entitled "alcoholic beverages and tobacco products".

The eight major components of the consumer price index (CPI) basket are: "food", "shelter", "household operations and furnishings", "clothing and footwear", "transportation", "health and personal care", "recreation, education and reading", and "alcoholic beverages and tobacco products".

These special aggregates include items from the main consumer price index (CPI) structure that are recombined so as to facilitate the analysis of the data.

Statistics Canada determined that the weights for mortgage interest cost were too high in the basket update effective January 2003. The effect on the Canada all-items consumer price index (CPI) was very small, within the rounding factor of the index. Effective with the July 2004 release, the weights were adjusted. See the documentation section of Definitions, data sources and methods http://www.statcan.ca/english/sdds/2301.htm for updated weights.

#### **Table 6.13**

The consumer credit balances are as at December 31.

This table provides estimated amounts of consumer credit outstanding on the books of selected lenders. The data relate mainly to credit extended to individuals, but also include unidentifiable amounts of credit extended for non-consumer purposes. Credit extended through the use of all-purpose credit cards is included with the balances of the selected lender responsible for their issuance. The data do not represent total consumer indebtedness since they do not include credit on the books of: furniture, TV and appliance stores; other retail outlets; motor vehicle dealers; public utilities; other credit card issuers not elsewhere included in the data; and credit card accounts of oil companies.

#### **Table 6.14**

The residential mortgage credit balances are as at December 31. This table provides estimated values of residential mortgage credit outstanding on the books of selected lenders.

#### **Table 6.16**

Generally, incorporated businesses are bigger, and their average assets and liabilities are higher. However, self-employed workers and small family businesses generally constitute unincorporated businesses.

Bankruptcy is simply a liquidation of assets. On the other hand, a business proposal is an agreement between the debtor and its creditors. This agreement allows the business to continue operating for the duration of the proposal. Upon successful completion of the proposal, the company is freed from all the debts specified in the terms of the proposal.

The sum of bankruptcies and proposals corresponds to the total number of cases of business insolvency.

The assets and liabilities compiled in our statistics represent the estimate of the assets and liabilities declared by the debtor upon making the application.

#### **Table 6.17**

See notes for table 6.16.

#### **Table 6.18**

See notes for table 6.16.

# **Table 6.19**

See notes for table 6.16.

# Section 7

#### Table 7.3

These numbers represent exports excluding re-exports of previously imported goods.

The basic source for export statistics is export documents collected by Canadian Border Services Agency except for data on electricity, crude petroleum and natural gas exported by pipeline, and exports to the United States which, under the terms of a reciprocal agreement between Canada and the United States, are based on U.S. import documents. Exports consist of Domestic Exports (goods wholly produced in Canada and goods previously included in import statistics which have since been changed in form by further processing and then exported) and Re-Exports (goods previously included in import statistics which are exported from Canada in the same form as when imported).

Exports are classified to the country to which they are consigned at the time the goods leave Canada, that is, to the furthest known destination. Exports are recorded at the valued declared on export documents, which usually reflect the actual selling price. International standards call for reporting trade in goods at the custom's frontier of the exporting economy. This means that exports from Canada on a balance of payments basis include in land freight from source to the border.

# Table 7.4

The basic source for import statistics is import documents collected by Canadian Border Services Agency except for data on imports of electricity, which are reported by the importing firms directly to Statistics Canada. Import statistics include all goods, which clear customs on arrival in Canada, together with goods, which are entered into customs warehouses. They include the value of goods of Canadian origin previously exported (including goods exported for special processing) and re-imported into Canada.

Data on a Customs Basis are recorded at the values established for duty according to the provisions of the *Customs Act*, that is, at fair market value in the country of export. On a balance of payments basis, imports are issued inclusive of in land freight to the customs frontier of the exporting economy.

## Table 7.5

Other European Union (EU) countries includes currently Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain; from January 1995, includes Austria, Finland, and Sweden; from May 2004, Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic and Slovenia.

See notes for table 7.3.

#### Table 7.6

Other European Union (EU) countries includes currently Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain; from January 1995, includes Austria, Finland, and Sweden; from May 2004, Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic and Slovenia.

See notes for table 7.4.

#### Table 7.7

See notes for table 7.3.

#### Table 7.8

See notes for table 7.4.

#### Table 7.9

See notes for table 7.3.

# **Table 7.10**

See notes for table 7.4.

#### **Table 7.11**

Includes a general provision to cover legal, accounting and third-party management consulting until surveyed more specifically from 1995; also includes retail software before 1996.

# **Table 7.12**

Travel receipts and payments are defined in accordance with balance of payments conventions. For definitions of balance of payments terminology, see appendix A: "Glossary".

# **Section 8**

# Table 8.1

A statistical establishment is the smallest grouping of production entities which:

- (a) Produces as homogeneous a set of goods and/or services as possible;
- (b) Does not cross provincial boundaries;
- (c) Provides data on the value of output together with the cost of principal intermediate inputs used along with the cost and quantity of labour resources used to produce the output.

# "Indeterminate" category

The establishments in this category do not maintain employee payroll, but may have employee work forces which consist of contracted workers, family members or business owners. However the Business Register does not have this information available, therefore has assigned them to an "Indeterminate" category.

#### Table 8.3

 Statistics Canada is no longer publishing separate figures for Department Stores and Other General Merchandise Stores due to confidentiality constraints. Instead, Department Stores sales are combined with Other General Merchandise Stores sales and are published under the grouping "General Merchandise Stores" in CANSIM tables 80-0014 and 80-0015.

Store retailers operate fixed point-of-sale locations, located and designed to attract a high volume of walk-in customers. In general, retail stores have extensive displays of merchandise and use mass-media advertising to attract customers. They typically sell merchandise to the general public for personal or household consumption, but some also serve business and institutional clients. These include establishments such as office supplies stores, computer and software stores, gasoline stations, building material dealers, plumbing supplies stores and electrical supplies stores.

In addition to selling merchandise, some types of store retailers are also engaged in the provision of after-sales services, such as repair and installation. For example, new automobile dealers, electronic and appliance stores and musical instrument and supplies stores often provide repair services, while floor covering stores and window treatment stores often provide installation services. As a general rule, establishments engaged in retailing merchandise and providing after sales services are classified in this sector.

Catalogue sales showrooms, gasoline service stations, and mobile home dealers are treated as store retailers.

Please note 8.3, 8.4, 8.5 and 8.21 have been modified for all years because the surveys switched from SIC 1980 to NAICS 2002.

#### Table 8.4

See notes for table 8.3.

#### **Table 8.5**

See notes for table 8.3.

# Table 8.7

- 1. Commercial vehicles include minivans, sport-utility vehicles, light and heavy trucks, vans and buses.
- 2. For reasons of confidentiality, data for the Yukon, the Northwest Territories and Nunavut have been included with the data for British Columbia.

Percentage changes shown are year-to-year changes.

Included sales by all Canadian and American motor vehicle manufacturers and importers of foreign-manufactured motor vehicles.

The value of sales is based on the selling price to consumer that is, the manufacturer's invoice price plus estimated dealer's mark-up, charges for standard equipment and options, less provincial sales tax and GST.

#### Table 8.8

- Trucks include minivans, sport-utility vehicles, light and heavy trucks, vans and buses.
- 2. Includes Japan and other countries.

See notes for table 8.7.

New motor vehicles fall into two categories defined on the basis or origin: those manufactured in North America and those manufactured overseas. The latter are imported in a fully assembled state from countries other than the United States or Mexico (that is, from Japan or European countries). All passenger cars and commercial vehicles assembled in Canada, the United States or Mexico and sold in Canada are treated by Statistics Canada as domestically manufactured vehicles.

#### **Table 8.10**

The statistics refer to the sale of Canadian and imported alcoholic beverages in the fiscal year ended March 31, by:

- Liquor authorities to the final consumer and to holders of licenses to resell;
- 2. Wineries and breweries to the holders of licenses to resell; and
- Wineries' and brewers' retail outlets.

Total sales include discounts, rebates and GST but exclude provincial retail sales taxes.

Value figures do not represent the final retail-selling price of alcoholic beverages, as mark-ups by licensees are not included. Volume of sales is a more realistic indicator of trends in consumption.

#### **Table 8.11**

Total wines contain unidentified wines.

See notes for table 8.10.

# **Table 8.13**

- 1. The survey measures film, video and audio-visual production in Canada, whether the controlling interest of the production company is Canadian or foreign.
- 2. The calendar year ending December 31st is the reporting period. However, if the respondent cannot provide calendar year data, they can report for their year ending between April 1 and March 31.
- 3. Figures may not add to totals due to rounding.
- 4. Data for all of the territories are included with British Columbia except for counts of producers.
- 5. "Home video productions" was removed as a type of production from the 1999/2000 questionnaire due to low reporting. It now falls under the category "other productions".
- 6. The survey does not specifically ask for production employment, nor production wages, salaries and benefits. Therefore, employment as well as salaries, wages and benefits include production and non-production activities.
- 7. The expenses were incurred for production and non-production activities.
- 8. Profit margin is derived as follows: total revenue minus total operating expenses divided by total revenue.

## **Table 8.15**

- An active statistical establishment is one production entity or the smallest grouping of production entities
  which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial
  boundaries; and for which records provide data on the value of output together with the cost of principal
  intermediate inputs used and cost and quantity of labour resources used to produce the output.
- 2. Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Due to rounding, components may not add to total (where applicable).
- 3. Comprises the following standard North American Industry Classification System (NAICS) codes: 721111; 721112; 721113; 721114; 72112; 721198.
- 4. Comprises the following standard North American Industry Classification System (NAICS) codes: 721191; 721192; 721211; 721212; 721213; 72131.

Incudes Bed and Breakfasts (NAICS 721191), Housekeeping Cottages and Cabins (NAICS 721192), RV (Recreational Vehicle) Parks and Campgrounds (NAICS 721211), Hunting and Fishing Camp (Outfitter) (NAICS 721212), Recreational and Vacation Camps (NAICS 721213, Rooming and Boarding Houses (NAICS 721310).

## **Table 8.16**

- An active statistical establishment is one production entity or the smallest grouping of production entities
  which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial
  boundaries; and for which records provide data on the value of output together with the cost of principal
  intermediate inputs used and cost and quantity of labour resources used to produce the output.
- 2. Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Due to rounding, components may not add to total (where applicable).
- 3. Comprises the following standard North American Industry Classification System (NAICS) codes: 721111; 721112; 721113; 721114; 72112; 721198.
- 4. Comprises the following standard North American Industry Classification System (NAICS) codes: 721191; 721192; 721211; 721212; 721213; 72131.
- See notes for table 8.15.

## **Table 8.17**

The three NAICS industry classifications covered under the Annual Survey of Software Development and Computer Services are: Computer Systems Design and Related Services (NAICS 541510), Software Publishers (NAICS 511210), Data Processing, Hosting and Related Services (NAICS 518210).

This table contains data on one of the three industry classifications, Computer Systems Design and Related Services (NAICS 541510), for information on the other two industry classifications please call 613-951-0410.

- Operating revenue excludes investment income, capital gains, extraordinary gains and other non-recurring items. Note that prior to reference year 2000, total revenue rather than operating revenue is reported. The 1999/2000 trend may be slightly distorted.
- Operating expenses exclude write-offs, capital losses, extraordinary losses, interest on borrowing, and other non-recurring items. Note that prior to reference year 2000, total expenses rather than operating expenses are reported. The 1999/2000 trend may be slightly distorted.

- 3. Salaries, wages and benefits include vacation pay and commissions for all employees for whom a T4 slip was completed. This category also includes the employer portion of employee benefits for items such as Canada/Quebec Pension Plan or Employment Insurance premiums. Salaries and wages do not include working owners' dividends nor do they include the remuneration of owners of unincorporated businesses. Therefore the relative level of salaries, wages and benefits will be lower in industries where unincorporated businesses are significant contributors.
- 4. Operating profit margin is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated businesses, operating profit margin includes unpaid remuneration to partners and proprietors, which is not recorded as salaries, wages and benefits. Therefore the profit estimate will be higher in industries where unincorporated proprietorships and partnerships are significant contributors. Note that prior to reference year 2000, total profit margin rather than operating profit margin is reported. The 1999/2000 trend may be slightly distorted.
- 5. An active statistical establishment is one production entity or the smallest grouping of production entities which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial boundaries; and for which records provide data on the value of output together with the cost of principal intermediate inputs used and cost and quantity of labour resources used to produce the output.

Due to rounding, numbers may not sum exactly to totals.

Based on surveyed firms only.

Number of employees is based on the concept of full time employee equivalents, that is, two part-time employees are equal to one full-time employee in deriving total industry employment. For this industry over 90% of paid employees are full time employees.

## **Table 8.19**

- 1. Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Due to rounding, components may not add to total (where applicable).
- Operating revenue excludes investment income, capital gains, extraordinary gains and other non-recurring items. Note that prior to reference year 2000, total revenue rather than operating revenue is reported. The 1999/2000 trend may be slightly distorted.
- 3. Salaries, wages and benefits include vacation pay and commissions for all employees for whom a T4 slip was completed. This category also includes the employer portion of employee benefits for items such as Canada/Québec Pension Plan or Employment Insurance premiums. Salaries and wages do not include working owners' dividends nor do they include the remuneration of owners of unincorporated business. Therefore the relative level of salaries, wages and benefits will be lower in industries where unincorporated businesses are significant contributors.
- Operating expenses exclude write-offs, capital losses, extraordinary losses, interest on borrowing, and other non-recurring items. Note that prior to reference year 2000, total expenses rather than operating expenses are reported. The 1999/2000 trend may be slightly distorted.

5. Operating profit margin is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated businesses, operating profit margin includes unpaid remuneration to partners and proprietors, which is not recorded as salaries, wages and benefits. Therefore the profit estimate will be higher in industries where unincorporated proprietorships and partnerships are significant contributors. Note that prior to reference year 2000, total profit margin rather than operating profit margin is reported. The 1999/2000 trend may be slightly distorted.

## **Table 8.20**

Group insurance policies are issued with a master policy covering more than one person and are taken out by employers, unions and trade associations. New contracts, including transfers of coverage from one insurer to another (which shows some volatility from year to year), account for the majority (about 90 per cent) of the group insurance purchased, while extensions of existing contracts make up the remainder. The provision of more group insurance under existing benefit schedules to a worker receiving more pay is not classified as a new purchase.

## **Table 8.21**

Annual sales are the sum of seasonally adjusted monthly sales for each year shown. Inventory levels are the December closing seasonally adjusted values for each year shown. Two trade groups, which are not collected monthly, Grain and Petroleum Products, are not shown in this table.

## Tables 8.22, 8.23, 8.24 and 8.25

Beginning in 2004, the Annual Survey of Manufactures and Logging (ASML) replaces the Annual Survey of Manufactures and the Annual Survey of Forestry. While the ASML covers the same target population as its predecessors, this new survey ushers in a number of conceptual and methodological changes intended to reduce response burden, enhance data quality and streamline survey operations. Two changes have the greatest impact on the comparability of the principal statistics series for manufacturing published in CANSIM tables 301-0003 and 301-0006: some redefinition of the survey content and a change in the coverage threshold for published statistics.

Financial variables in the Annual Survey of Manufactures and Logging (ASML) survey are defined to adhere to the Statistics Canada Chart of Accounts (COA) classification. The COA is a standard classification based on generally accepted accounting principles. It was developed for reporting information on financial position and performance. As a result, some variables in the ASML are defined differently from those collected in past surveys for manufacturing and new variables have been added. These changes are reflected in a new list of published principal statistics for manufacturing. Of the variables in this list that were published previously, only two are not strictly comparable: the cost of energy and water utility and the cost of materials and supplies.

Traditionally, published statistics for manufacturing cover the activities of businesses above certain dollar thresholds for sales of goods manufactured. For reference year 2004, these thresholds have been changed so that the new published Annual Survey of Manufactures and Logging (ASML) data series is not strictly comparable with the previously published data series for manufacturing. The previous CANSIM table 301-0003 for manufacturing principal statistics covered the activities of businesses with annual sales greater than or equal to \$30,000. The new CANSIM table 301-0006 publishes principal statistics for businesses above certain revenue thresholds that vary by province and by industry. Below these thresholds are the smallest manufacturing businesses which are excluded from the ASML survey in order to reduce response burden.

To help users interpret changes in the manufacturing data series and evaluate industry growth, the 2003 manufacturing principal statistics have been republished using the coverage thresholds and survey variables introduced for the 2004 reference year. The shares of manufacturing sales for Canada published based on the old CANSIM table 301-0003 and new CANSIM table 301-0006 coverage thresholds are comparable at 98.3% and 96.4% respectively. Additional coverage rate detail is available on request for users who want to evaluate the impact of the threshold change more fully.

## **Table 8.27**

- An active statistical establishment is one production entity or the smallest grouping of production entities
  which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial
  boundaries; and for which records provide data on the value of output together with the cost of principal
  intermediate inputs used and cost and quantity of labour resources used to produce the output.
- Operating revenue excludes investment income, capital gains, extraordinary gains and other non-recurring items.
- 3. Salaries, wages and benefits include vacation pay and commissions for all employees for whom a T4 slip was completed. This category also includes the employer portion of employee benefits for items such as Canada/Québec Pension Plan or Employment Insurance premiums. Salaries and wages do not include working owners' dividends nor do they include the remuneration of owners of unincorporated business. Therefore the relative level of salaries, wages and benefits will be lower in industries where unincorporated businesses are significant contributors.
- 4. Operating expenses exclude write-offs, capital losses, extraordinary losses, interest on borrowing, and other non-recurring items.
- 5. Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Due to rounding, components may not add to total (where applicable).
- 6. Operating profit margin is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated businesses, operating profit margin includes unpaid remuneration to partners and proprietors, which is not recorded as salaries, wages and benefits. Therefore the profit estimate will be higher in industries where unincorporated proprietorships and partnerships are significant contributors.

## **Table 8.29**

- 1. Estimates for the most recent year are preliminary. Preliminary data are subject to revision.
- Operating revenue excludes investment income, capital gains, extraordinary gains and other non-recurring items.
- Operating expenses exclude write-offs, capital losses, extraordinary losses, interest on borrowing, and other non-recurring items.
- 4. Salaries, wages and benefits include vacation pay and commissions for all employees for whom a T4 supplementary form was completed. This category also includes the employer portion of employee benefits for items such as Canada/Québec Pension Plan or Employment Insurance premiums. Salaries and wages do not include working owners' dividends nor do they include the remuneration of owners of unincorporated business. Therefore the relative level of salaries, wages and benefits will be lower in industries where unincorporated businesses are significant contributors.
- 5. Operating profit margin is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated businesses, profit margin includes unpaid remuneration accruing to partners and proprietors, which is not recorded as salaries, wages and benefits. Therefore the profit estimate will be higher in industries where unincorporated proprietorships and partnerships are significant contributors.

6. An active statistical establishment is one production entity or the smallest grouping of production entities which produces as homogenous a set of goods and/or services as possible, which does not cross provincial boundaries, and for which records provide data on the value of output together with the cost of principal intermediate inputs used and cost and quantity of labour resources used to produce the output.

#### **Table 8.30**

See notes for table 8.29

#### **Table 8.31**

- Reference year 2000 includes: commissions paid to independent real estate sales persons. Reference year 2001 to reference year 2004 includes commissions paid to independent real estate persons and other real estate brokers.
- Reference year 2000 includes rental of office space or other real estate, rental of motor vehicles (without driver), rental of computers and peripherals, rental of other machinery and equipment (without operator) and rental of all other goods. Reference year 2001 and reference year 2002 includes leasing or rental of office space or other real estate, and all other leasing or rental expenses.

#### **Table 8.32**

- 1. Estimates for the most recent year are preliminary. Preliminary data are subject to revision. Data from 2001-2003 have been revised.
- 2. Operating revenue excludes investment income, capital gains, extraordinary gains and other such non-recurring items.
- 3. Operating expenses exclude write-offs, capital losses, extraordinary losses and other such non-recurring items.
- 4. 'Salaries, wages and benefits' include vacation pay and commissions for all employees for whom a T4 supplementary form was completed. This category also includes the employer portion of employee benefits for items such as Canada/Québec Pension Plan or Employment Insurance premiums. Salaries and wages do not include the remuneration of owners of unincorporated business, therefore the relative level of 'salaries, wages and benefits' will be lower in industries where unincorporated businesses are significant contributors.
- 5. Operating profit margin is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated firms, profit margin includes unpaid remuneration to partners and proprietors, which is not recorded as 'salaries, wages and benefits'. Therefore the profit margin will be higher in industries where unincorporated proprietorships and partnerships are significant contributors.
- 6. A 'statistical establishment' is one production entity or the smallest grouping of active production entities which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial boundaries; and for which records provide data on the value of output together with the cost of principal intermediate inputs used and cost and quantity of labour resources used to produce the output.

## Table 8.36-1

- 1. Research and development statistics are provided for 46 industries falling under 6 sub-groups: agriculture, forestry, fishing and hunting; mining and oil and gas extraction; utilities; construction; manufacturing and services industries. The industry breakdown is in accordance with the 2002 North American Industry Classification System (NAICS) (catalogue number 12-501-X) and is necessary to preserve the confidentiality of the respondents. In a small number of cases, adjustments to the NAICS classification was necessary in order to adhere to the international guidelines for science and technological surveys as defined in the Organisation for Economic Co-operation and Development (OECD) Frascati Manual.
- Figures are preliminary data for the three most recent years. Personnel figures are not available for the two most recent reference periods.
- 3. Intramural expenditures are expenditures for research and development work performed within the reporting company, including work financed by others.
- 4. Includes North American Industry Classification System (NAICS) codes 111, 1121-1124, 1125, 1129, 113, 114, 1151, 1152 and 1153.
- 5. Includes North American Industry Classification System (NAICS) codes 211, 212 and 213.
- 6. Includes North American Industry Classification System (NAICS) codes 221 and 562.
- 7. Includes North American Industry Classification System (NAICS) codes 41, 44-45, 48-49, 51, 52, 53, 54, 55, 561, 61, 71, 72, 81 and 91.
- 8. Includes North American Industry Classification System (NAICS) codes 52 and 53.
- 9. Includes North American Industry Classification System (NAICS) codes 5411, 5412, 5414, 5418, 5419, 55, 56, 61, 71, 72, 81 and 91.
- 10. The information and communications technologies (ICT) sector is comprised of a subset of the North American Industry Classification System (NAICS) codes from various industries already included in this series and, therefore, should not be used in any calculations combining industries for totals since this would result in double counting in certain industries. The NAICS codes included in the ICT sector are: 3333, 33411, 33421, 33422, 33431, 33441, 33451, 33592, 4173, 41791, 5112, 517 to 518, 53242, 5415 and 8112.

## Tables 8.36-2, 8.36-3, 8.36-4 and 8.36-5

- 1. Research and development statistics are provided for 46 industries falling under 6 sub-groups: agriculture, forestry, fishing and hunting; mining and oil and gas extraction; utilities; construction; manufacturing and services industries. The industry breakdown is in accordance with the 2002 North American Industry Classification System (NAICS) (Catalogue number 12-501-XPE) and is necessary to preserve the confidentiality of the respondents. In a small number of cases, adjustments to the NAICS classification was necessary in order to adhere to the international guidelines for science and technological surveys as defined in the Organisation for Economic Co-operation and Development (OECD) Frascati Manual.
- 2. Figures are preliminary data for the three most recent years. Personnel figures are not available for the two most recent reference periods.
- 3. Includes North American Industry Classification System (NAICS) codes 111, 1121-1124, 1125, 1129, 113, 114, 1151, 1152 and 1153.
- 4. Includes North American Industry Classification System (NAICS) codes 211, 212 and 213.

- 5. Includes North American Industry Classification System (NAICS) codes 221 and 562.
- 6. Includes North American Industry Classification System (NAICS) codes 41, 44-45, 48-49, 51, 52, 53, 54, 55, 561, 61, 71, 72, 81 and 91.
- 7. Includes North American Industry Classification System (NAICS) codes 52 and 53.
- 8. Includes North American Industry Classification System (NAICS) codes 5411, 5412, 5414, 5418, 5419, 55, 56, 61, 71, 72, 81 and 91.
- 9. The information and communications technologies (ICT) sector is comprised of a subset of the North American Industry Classification System (NAICS) codes from various industries already included in this series and, therefore, should not be used in any calculations combining industries for totals since this would result in double counting in certain industries. The NAICS codes included in the ICT sector are: 3333, 33411, 33421, 33422, 33431, 33441, 33451, 33592, 4173, 41791, 5112, 517 to 518, 53242, 5415 and 8112.

## Section 9

## Table 9.1

- 1. Census metropolitan area (CMA) refers to the general concept of a very large urban area, as well as the adjacent urban and rural areas which have a high degree of economic and social integration with that urban area. A CMA is delineated around an urban area (called the urbanized core) and having a population of at least 100,000 (based on the previous census). Once an area becomes a CMA, it is retained in the program even if its population subsequently declines. CMAs are comprised of one or more census subdivisions (CSDs) which meet at least one of the following criteria: (1) the CSD falls completely or partly inside the urbanized core; (2) at least 50% of the employed labour force living in the CSD works in the urbanized core; or (3) at least 25% of the employed labour force working in the CSD lives in the urbanized core (2001 Census Dictionary, catalogue number 92-378-XPE, page 214).
- Postcensal estimates are based on the latest census results adjusted for net census undercoverage and
  for the estimated population growth that occurred since that census. Intercensal estimates are based on
  postcensal estimates and data adjusted for net census undercoverage of the censuses preceding and
  following the considered year.
- 3. Estimates are final intercensal from 1996 to 2000, final postcensal from 2001 to 2003, updated postcensal for 2004 and 2005 and preliminary postcensal for 2006. Estimates are produced using the component method.
- 4. Age at last birthday in years.
- 5. Preliminary postcensal population estimates by age and sex for census divisions (CDs) and census metropolitan areas (CMAs) in Quebec were prepared by "l'Institut des statistiques du Québec" (ISQ). Estimates for Quebec were based on statistics derived from the registration file for insured people of the "Régie de l'assurance-maladie". These estimates were controlled to Statistics Canada provincial estimates. Please note that for this specific case, the component method is not applicable.

## Table 9.2

Ethnic origin refers to the ethnic or cultural group(s) to which the respondent's ancestors belong. Ethnic or cultural origin refers to the ethnic "roots" or ancestral background of the population, and should not be confused with citizenship or nationality.

"Single origins" indicates the number of respondents who reported only one ethnic origin. "Multiple origins" indicates the number or respondents who reported more than one ethnic origin.

The total of all specific groups is not equal to the total population due to multiple responses and the fact that only selected groups are presented.

#### Table 9.3

2001 and 1996 data are based on 20% sample data.

Mother tongue refers to the first language learned in childhood and still understood by the individual at the time of the Census.

#### Table 9.4

Data derived from 1/5 sample of the population 15 years of age and over, excluding institutional residents.

#### Table 9.7

Spending 30% or more of household income on housing costs and Spending 30 to 99% of household income on housing costs:

It should be noted that not all households spending 30% or more of incomes on shelter costs are necessarily experiencing housing affordability problems. This is particularly true of households with high incomes. There are also other households who choose to spend more on shelter than on other goods. Nevertheless, the allocation of 30% or more of a household's income to housing expenses provides a useful benchmark for assessing trends in housing affordability.

The relatively high shelter cost to household income ratios for some households may have resulted from the difference in the reference period for shelter cost and household income data. The reference period for shelter cost data (gross rent for tenants, and owner's major payments for owners) is 2001, while household income is reported for the year 2000. As well, for some households the 2000 household income may represent income for only part of a year.

#### Table 9.8

See notes for table 9.7.

#### Table 9.9

Household maintainer refers to the person or one of the persons in the household who pays the rent, or the mortgage, or the taxes, or electricity, etc. for the dwelling.

## **Table 9.10**

This series of industry data is based on the North American Industry Classification System (NAICS).

See notes for table 3.1.

#### **Table 9.11**

- 1. Labour income includes employment income and Employment Insurance benefits.
- 2. Employment income includes wages and salaries, commissions from employment, training allowances, tips and gratuities, and net self-employment income (business, professional, commission, farming and fishing income).
- 3. Taxfilers are people who filed a tax return for the reference year and were alive at the end of the year.

- 4. Median is the middle number in a group of numbers. Where a median income, for example, is given as \$26,000, it means that exactly half of the incomes reported are greater than or equal to \$26,000, and that the other half is less than or equal to the median amount. Median incomes in the data tables are rounded to the nearest hundred dollars. Zero values are not included in the calculation of medians for individuals.
- 5. The census metropolitan area (CMA) of Ottawa-Gatineau straddles the provincial borders of Ontario and Quebec. Data for the provincial parts are available in CANSIM. Data for the two parts may be added together to provide a total for the area, with the exception of medians, percentages, indexes and averages.

#### **Table 9.12**

The data in this table are based on income tax returns for the tax year.

Some taxfilers have no income but file for other reasons, such as to claim a Child Tax Benefit. For those taxfilers (and non-filing spouses) reporting some income, medians and a distribution of income are given.

Persons not filing income tax returns include most children and many elderly (mainly those who receive only Old Age Security and Guaranteed Income Supplement).

#### **Table 9.13**

Includes only the Ontario part of the Ottawa-Gatineau metropolitan area.

Winnipeg includes the municipality of Selkirk.

In 1998, 1999, and every second year thereafter starting with 2001, statistics for Canada include the territories. For the other years, Canada-level statistics include the 10 provinces only.

#### **Table 9.14**

The statistics on building permits are essential for the computation of capital expenditures. Furthermore, since the issuance of a building permit is one of the first steps in the construction process, these statistics are widely used as a leading indicator of building activity.

## **Table 9.15**

A statistical establishment is the smallest grouping of production entities which:

- (a) Produces as homogeneous a set of goods and/or services as possible;
- (b) Does not cross provincial boundaries;
- (c) Provides data on the value of output together with the cost of principal intermediate inputs used along with the cost and quantity of labour resources used to produce the output.

## **Table 9.16**

New housing price indexes measure changes over time in the contractors' selling prices of new residential houses, where detailed specifications remain the same between two consecutive periods.

House prices reported by sample builders are adjusted for changes in quality of both the structures and the serviced lots, including intangible variations of location to ensure similarity of specifications.

This index does not measure shelter costs. Price changes for existing houses are excluded from these price indexes.

## **Table 9.17**

The Consumer Price Index for each urban centre measures price change from one time period to another within that specific urban centre. Thus, while urban centre CPIs show the movement of prices over time in each urban centre, they do not indicate price level differences between urban centres. Such inter-city price comparisons are available in Table 12 of the monthly Consumer Price Index, catalogue no. 62-001-X.

#### **Table 9.18**

See notes for table 9.13.

#### **Table 9.19**

These migration data were derived by comparing addresses supplied on personal income tax returns filed in the spring of two consecutive years (2000/2001, and 2001/2002). They reflect intraprovincial moves between census metropolitan areas, as well as interprovincial and international movements.

#### **Table 9.20**

The data in these tables are based on income tax returns for the tax year.

The family data are based on the census family concept. A family includes parent(s) and non-married children living in the same dwelling. Persons filing tax returns are matched to a family using common links such as spousal social insurance number, last name and address. Taxfilers who are not matched to a family become non-family persons.

Persons not filing income tax returns include most children and some elderly (mainly those who receive only Old Age Security and Guaranteed Income Supplement). Non-filing children are identified from information obtained on the parent's tax return, the Canada Child Tax Benefit file and provincial births records.

Family income is the sum of the incomes of all members of the family. For those families reporting some income, medians are given.

## **Table 9.21**

See notes for table 9.20.

#### **Table 9.22**

Age refers to the age at last birthday (as of the latest census reference date).

Data are for total population, including institutional residents.

## **Table 9.23**

Ethnic origin refers to the ethnic or cultural group(s) to which the respondent's ancestors belong. Ethnic or cultural origin refers to the ethnic "roots" or ancestral background of the population, and should not be confused with citizenship or nationality.

A single response occurs when a respondent provides one ethnic origin only. A multiple response occurs when a respondent provides two or more ethnic origins.

The category 'Total population' represents total population. Sum of specific groups is not equal to total population due to multiple counts and the fact that seclected groups are presented.

## **Table 9.24**

Mother tongue refers to the first language learned in childhood and still understood by the individual at the time of the Census.

#### **Table 9.26**

Excludes census data for one or more incompletely enumerated Indian reserves or Indian settlements.

#### **Table 9.27**

An active statistical establishment is one production entity or the smallest grouping of production entities which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial boundaries; and for which records provide data on the value of output together with the cost of principal intermediate inputs used and cost and quantity of labour resources used to produce the output.

#### **Tables 9.31 and 9.32**

- 1. The methodology for calculating Census Metropolitan Area (CMA) populations was modified in 2003. Starting in 1996, the populations for CMAs have been adjusted to reflect the actual policing boundaries within the CMA and do not reflect the official Statistics Canada population for these CMAs.
- 2. The census metropolitan area (CMA) of Saguenay was formerly known as Chicoutimi-Jonquière.
- 3. The census metropolitan area (CMA) of Ottawa-Gatineau was formerly known as Ottawa-Hull.
- 4. Populations have been adjusted for the census metropolitan area (CMA) of St. Catharines-Niagara from 1991 onward to follow policing boundaries and do not reflect the official Statistics Canada population for this CMA.
- 5. Populations have been adjusted for the census metropolitan area (CMA) of Kitchener from 1991 onward to follow policing boundaries and do not reflect the official Statistics Canada population for this CMA.
- Crime data from April to December 2004 for Winnipeg are estimates (except for homicide and motor vehicle theft) due to the implementation of a new records management system. Therefore, please use caution when comparing these data with prior years.
- 7. Data for 2001 include estimates for 3 months for Vancouver Police and 2 months for Port Moody Police, covering the phase-in period required for a new records management system. In addition, from September 2000 to September 2001, as a result of labour action, there were decreases in the number of crimes reported to the Vancouver Police Department for certain offences. As a result, the number of Criminal Code offences reported by Vancouver were affected during this period.
- 8. Rates are based on population estimates of police jurisdictions derived from estimates provided by the Demography Division of Statistics Canada. The estimates are adjusted for net census undercount.

## Section 10

It should be emphasized that these projections are not predictions. Rather, they represent an attempt to establish plausible scenarios based on stated components assumptions, which are subject to uncertainty. As such, they are valuable statistical information for planners, policy makers, and the public at large interested in the future course of demographic change and related issues. Of the 13 set of projections produced, four have been choosen for the Market Research Handbook. Projection 1 is based on the low growth scenario, projection 2 is based on the medium growth scenario with "recent trends" as the pattern of interprovincial migration, projection 3 is based on the high growth scenario.

The base population for these projections is derived from the official postcensal estimates of population for Canada, provinces and territories as of July 1, 2005. The population is projected until 2031 for provinces and territories, and until 2056 for total Canada. As for assumptions and scenarios, please refer to the projection report or the CD-ROM of the projections (catalogue 91-520). Because of rounding, detail may not add to totals.

## Tables 10.1-1 and 10.2-1

The low-growth scenario is defined by the following assumptions: a Canadian total fertility rate that reaches 1.3 births per woman in 2016 and remains constant thereafter; a Canadian life expectancy that reaches 81.1 years for males and 85.3 years for females in 2031; a national immigration rate of 0.55% until 2031 followed by a number of immigrants equals until 2056 to the level reached in 2031; interprovincial migrations based on an average of the recent trends and the west coast trends assumptions.

#### Tables 10.1-2 and 10.2-2

The medium-growth and recent migration trends scenario is defined by the following assumptions: a Canadian total fertility rate constant at 1.5 births per woman; a Canadian life expectancy that reaches 81.9 years for males and 86.0 years for females in 2031; a national immigration rate of 0.7% until 2031 followed by a number of immigrants equals until 2056 to the level reached in 2031; interprovincial migrations based on the trends observed between 2000 and 2003.

## Tables 10.1-3 and 10.2-3

The medium-growth and medium migration trends scenario is defined by the following assumptions: a Canadian total fertility rate constant at 1.5 births per woman; a Canadian life expectancy that reaches 81.9 years for males and 86.0 years for females in 2031; a national immigration rate of 0.7% until 2031 followed by a number of immigrants equals until 2056 to the level reached in 2031; interprovincial migrations based on an average of the recent trends and the west coast trends assumptions.

## Tables 10.1-4 and 10.2-4

The high-growth scenario is defined by the following assumptions: a Canadian total fertility rate that reaches 1.7 births per woman in 2016 and remain constant thereafter; a Canadian life expectancy that reaches 82.6 years for males and 86.6 years for females in 2031; a national immigration rate of 0.85% until 2031 followed by a number of immigrants equals until 2056 to the level reached in 2031; interprovincial migrations based on an average of the recent trends and the west coast trends assumptions.

# Appendix A

# **Glossary**

Accrued net income of farm operators from farm production: net income received by farm operators from farm production plus the undistributed portion of earnings arising out of the operations of the Canadian Wheat Board and the adjustment made to shift agricultural subsidies from a cash to an accrual basis.

**Balance of payments / Customs basis:** data for the compilation of merchandise trade are based on customs documents, which are processed and published by the International Trade Division of Statistics Canada. These data are on a customs basis. However, certain adjustments are made in terms of valuation, timing, and coverage to align data on a customs basis with balance of payments concepts and conventions as used within the framework of the National Accounts (that is, data on a balance of payments basis).

**Basic prices:** a basic price valuation includes the costs of production factors (labour and capital) and indirect taxes and subsidies on **production factors**. Income measures are estimates at basic prices or **market prices**.

**Business bankruptcy:** a business bankruptcy is chiefly attributable to liabilities incurred by a business, as a result of which the business is unable to meet its current payment obligations out of its cash flows or realizable assets. Business bankruptcies include proprietorships, partnerships and limited companies.

**Capital consumption allowances:** allowances for the using up of capital in the productive process. They are calculated for business and government fixed assets as well as housing. They also include miscellaneous valuation adjustments bringing business accounting records into conformity with national accounts definitions, such as the addition of claims paid by insurance companies to compensate for fire and other losses.

**Capital transfers:** transfers in cash or in kind, out of the wealth of the donor (inheritances and migrants' funds, transfer of ownership of an asset or cancellation of a liability), or transfers which the recipient is expected to use towards the acquisition of an asset. Capital transfers have no effect on the saving of the donor or recipient.

Census agglomeration (CA): a census agglomeration (CA) is a large urban area (known as the urban core) together with adjacent urban and rural areas (known as urban and rural fringes) that have a high degree of social and economic integration with the urban core. A CA has an urban core population of at least 10,000, based on the previous census. However, if the population of the urban core of a CA declines below 10,000, the CA is retired. Once a CA attains an urban core population of at least 100,000, based on the previous census, it becomes a CMA. CAs that have urban cores of at least 50,000, based on the previous census, are subdivided into census tracts. Census tracts are maintained for CAs even if the population of the urban core subsequently falls below 50,000.

There are 113 CAs across Canada, based on the 2001 Census.

**Census metropolitan area (CMA):** the general concept of a census metropolitan area (CMA) is one of a very large **urban area**, together with adjacent **urban** and **rural areas** which have a high degree of economic and social integration with that urban area.

A Census Metropolitan Area is delineated around an urban area (called the **urbanized core** and having a population of at least **100,000 (based on the previous census)**. Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

CMAs are comprised of one or more census subdivisions (CSDs) which meet at least one of the following criteria:

- (a) the CSD falls completely or partly inside the urbanized core:
- (b) at least 50% of the employed labour force **living** in the CSD **works** in the urbanized core; or

(c) at least 25% of the employed labour force **working** in the CSD **lives** in the urbanized core (**2001 Census Dictionary**, catalogue no. 92-378-X, page 214).

There are 27 CMAs in Canada, based on the 2001 Census.

Chain Fisher volume index: a measure of change in volume from period to period. It is calculated as the geometric mean of a chain Paasche volume index and a chain Laspeyres volume index. In other words, it is an average of two distinct measures of change in volume: one calculated as if prices were constant in the first of two adjacent periods (Laspeyres volume) and the other calculated as if prices were constant in the second of the two adjacent periods (Paasche volume).

**Chained dollar:** chained dollar series are calculated as the product of the chain-type quantity index and the current dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

**Components of demographic growth:** any of the classes of events generating population movement variations. Births, deaths, migration, marriages, divorces and new widowhoods are the components responsible for the variation since they alter either the total population or the age, sex and marital status distribution of the population.

## Construction

- Building permit: this classification is one of buildings or structures for which a building permit was issued by
  a municipality. A building permit may be issued by municipalities for: construction of new buildings; alterations,
  additions or conversions, etc.
- Number of dwelling units: for "Residential construction", consists of the number of self-contained dwelling units created.
- Value of residential construction: the value of building permits issued for new dwellings or for improvements.

Consumer credit: credit extended to persons for purchasing consumer goods and services.

**Consumer goods:** new goods acquired by households for their own consumption. Consumer goods are made up of three categories:

- (a) **Durable goods** which can be used repeatedly or continuously for more than one year, such as motor vehicles and major appliances;
- (b) **Semi-durable goods** which have an expected lifetime of one year or somewhat more, such as clothing, footwear and linens;
- (c) **Non-durable goods** which can be used only once, such as food, gasoline, alcoholic beverages and tobacco. In practice, however, this category also includes goods of minor value which are used more than once, such as certain household supplies.

**Consumer services:** services consumed by households, such as rent (including the rent imputed on owner-occupied housing), transportation, education, medical care, child care, food and accommodation services as well as travel expenditures of Canadians abroad, less travel expenditures of foreigners in Canada. Also includes the current (operating) expenses of associations of individuals.

**Corporation profits before taxes:** the net earnings from economic activity of privately-held corporations, measured after deduction of capital consumption allowances.

**Current prices:** a valuation at current prices is expressed at the prices prevailing during the period being referred to. See **Chain Fisher volume index.** 

Current transfers: transfers out of the income of the donor, reducing his saving and adding to that of the recipient.

**Department store:** defined as a retail outlet that sells the following lines of merchandise:

- (a) Family clothing and apparel at least six commodity lines comprising at least 20% of the total sales.
- (b) Furniture, appliances and home furnishings at least four commodity lines comprising at least 10% of the total sales.
- (c) All other (miscellaneous) at least three commodity lines comprising at least 10% of total sales. This category includes all commodities not shown above, such as: toiletries, cosmetics and drugs; photographic equipment and supplies; piece goods; notions and smallwares; jewellery; sporting goods and luggage; stationery, books and magazines; and food.

The sales of concessions located in department stores are regarded as part of the overall business of the department store outlet in which they are located. However, sales of an associated food department are included only if it is an integral part of the overall department store operation and is not identified to the public by a different name from that of the department store with which it is associated.

**Direct selling:** this Canadian industry comprises establishments, not classified to any other industry, primarily engaged in non-store retailing. These establishments use methods, such as door-to-door solicitation, in-home demonstration and temporary displaying of merchandise (stalls), to reach their customers and market their merchandise.

**Direct taxes:** current transfers to government from persons, unincorporated businesses, corporations and government business enterprises in the form of taxes on income from employment, property, holding gains or any other source. Direct taxes from persons are recorded on a cash basis, and those from corporations and government business enterprises, on an accrual basis.

**Direct taxes from persons:** income taxes, succession duties and estate taxes paid by persons and unincorporated businesses.

Earnings: See Wages and Salaries.

Emigrant: Canadian citizen or immigrant who has left Canada to establish a permanent residence in another country.

**Employed:** for Statistics Canada's Labour Force Survey, the employed include all persons who, during the reference week,

- (a) did any work at all at a job or business, that is, paid work in the context of an employer-employee relationship, or self-employment. It also includes unpaid family work, which is defined as unpaid work contributing directly to the operation of a farm, business or professional practice owned and operated by a related member of the same household; or
- (b) had a job but were not at work due to illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reasons not specified above. Excluded from the employed labour force are persons on lay-off and persons whose job attachment is to a job that starts at a definite date in the future.

**Employment income:** for data based on tax returns, employment income is defined as wages, salaries, commissions from employment, training allowances, tips and gratuities, self-employment income (net income from business, profession, farming, fishing and commissions) and tax-exempt employment income earned on an Indian reserve (new in 1999).

**Establishment:** the establishment is the smallest business unit that functions as a separate operating entity and is capable of reporting employment, wages and salaries, and inputs and outputs necessary for the calculation of gross margin. The establishment can be a proprietorship or partnership, if unincorporated; or a branch, plant, division or corporation, if incorporated.

**Exports and imports of services:** services are categorized under four headings: travel, transportation, commercial services and government services.

- Travel covers all receipts and payments arising from travel of less than one year between Canada and other
  countries, and for travel of more than one year for educational or health purposes. Travelers of more than one
  year are otherwise treated as residents of the country to which they travel, except for diplomats and military
  personnel on postings abroad. Government representatives on missions abroad are always treated as residents
  of their home countries, and their living and other expenditures abroad are included in government services.
- **Transportation services** cover receipts and payments of persons and goods by air, water and land, together with supporting services for the various modes of transport.
- Commercial services include communications; construction; insurance and other financial services; computer and information services; royalties and licence fees; commissions; equipment rentals; management services; advertising; research and development; architectural services; engineering and technical services; miscellaneous services to business; audio visual services; and personal, cultural and recreational services. The data include with holding taxes paid.
- Government services cover international transactions arising from government activities (diplomatic, commercial and military) not covered elsewhere in the balance of payments. Receipts chiefly comprise expenditures in Canada by foreign governments. Payments consist mainly of expenditures abroad by the federal and provincial governments. In addition to current outlays, government services include capital expenditures for property acquisitions and construction.

**Exports of goods and services:** current receipts from exports of merchandise, travel of non-residents in Canada, freight and shipping on Canadian account, and other services rendered to non-residents.

**Factor cost:** a valuation reflecting the cost of the factors of production (labour and capital). It corresponds to the value remaining after the deduction from market prices of all applicable taxes and subsidies. See **market prices**.

**Factors of production:** productive agents which, when combined, create economic output. In broad terms there are two factors of production, labour and capital.

## **Family**

- Census family refers to a married couple (with or without children of either or both spouses), a couple living common-law (with or without children of either or both partners) or a lone parent of any marital status, with at least one child living in the same dwelling. A couple living common-law may be of opposite or same sex. "Children" in a census family include grandchildren living with their grandparent(s) but with no parents present. (2001 Census dictionary, catalogue no. 92-378-X, page 133). Since it is impossible to establish trends with regard to the increase of same-sex couples, this group has been excluded in the estimation of census families.
- Census family status refers to the classification of the population according to whether or not the persons are members of a census family.
- Census family structure refers to the classification of census families into married couples (with or without children of either or both spouses), common-law couples (with or without children of either or both partners), and lone-parent families by sex of parent. A couple living common-law may be of opposite or same sex. "Children" in a census family include grandchildren living with their grandparent(s) but with no parents present. (2001 Census dictionary, catalogue no. 92-378-X, page 138). Since it is impossible to establish trends with regard to the increase of same-sex couples, this group has been excluded in the estimation of census families.

**Family persons** refer to household members who belong to a census family. They, in turn, are further classified as follows:

Spouses refer to persons of opposite sex who are legally married to each other and living in the same dwelling.

- **Common-law partners** are two persons of opposite sex or of the same sex who are not legally married to each other, but live together as a couple in the same dwelling.
- Lone parent refers to a mother or a father, with no spouse or common-law partner present, living in a dwelling with one or more children.

**Children** refer to blood, step- or adopted sons and daughters (regardless of age or marital status) who are living in the same dwelling as their parent(s), as well as grandchildren in households where there are no parents present. Sons and daughters who are living with their spouse or common-law partner, or with one or more of their own children, are not considered to be members of the census family of their parent(s), even if they are living in the same dwelling. In addition, those sons and daughters who do not live in the same dwelling as their parent(s) are not considered members of the census family of their parent(s). The category of **children** can be further distinguished as follows:

- Never-married sons and/or daughters in a census family, as used in censuses prior to 2001.
- Other sons and/or daughters in a census family who would not have been included in the census family of their parents according to the previous concept.
- Grandchildren living in the same household as their grandparent(s), with no parents present.

**Non-family persons** refer to household members who do not belong to a **census family**. They may be **related** to Person 1 (for example, Person 1's sister, brother-in-law, cousin, grandparent), or **unrelated** to Person 1 (for example, lodger, room-mate, employee). A person living alone is always a non-family person.

• **Household living arrangements** refers to the classification of persons in terms of whether they are members of a family household or of a non-family household, and whether they are family or non-family persons.

**Final domestic demand:** the sum of personal expenditure on consumer goods and services, net government current expenditure on goods and services, government gross fixed capital formation and business gross fixed capital formation.

**Government current expenditure on goods and services:** all current outlays for goods and services by the government sector, including wages and salaries of government employees. It also includes expenditure on weapons for defence and an imputation for the depreciation of government fixed assets. It is recorded before deduction of revenues from sales of goods and services in the government income and outlay account, and after deduction of these revenues in GDP (net government current expenditure on goods and services).

**Gross domestic product (GDP):** the total unduplicated value of the goods and services produced in the economic territory of a country or region during a given period. GDP can be measured three ways: as total incomes earned in current production, as total final sales of current production, or as total net values added in current production. It can be valued either at basic prices or at market prices.

Gross fixed capital formation: expenditures by the government and business sectors on buildings, engineering construction and machinery and equipment. Includes imports of used machinery and equipment, which constitute additions to domestic capital stock, and transfer costs on the sale of existing fixed assets (that is, real estate commissions). Comprises three broad categories: residential structures, non-residential structures and machinery and equipment. Government fixed capital formation includes spending on non-military defence buildings and equipment. Synonym of "investment in fixed capital".

**Home language:** refers to the language spoken most often at home reported in the Census. If more than one language was spoken equally often, both were reported.

Hotels: establishments operating six or more hotel / motel-type rooms within a main building.

**Household:** refers to a person or group of persons (other than foreign residents) who occupy a dwelling and do not have a usual place of residence elsewhere in Canada. It usually consists of a family group with or without lodgers,

employees, etc. However, it may consist of two or more families sharing a dwelling, a group of unrelated persons, or one person living alone. Household members who are temporarily absent on Census Day are considered as part of their usual household. For census purposes, every person is a member of one and only one household. Unless otherwise specified, all data are for private households only.

The members of a household not only share the same living accommodation, but normally pool some or all of their resources, and consume certain goods and services collectively.

- Household type refers to the basic division of private households into family and non-family households.
- Family household refers to a household that contains at least one census family (e.g., a husband and wife living in the same dwelling, or a parent with a never-married child).
- One-family household refers to a single census family that occupies one private dwelling.
- Multiple-family household is one in which two or more census families occupy the same private dwelling.
- **Non-family household** refers to one person who lives alone in a private dwelling, or to a group of persons who occupy a private dwelling and do not constitute a census family.
- Occupied private dwelling refers to a private dwelling in which a person or group of persons is permanently residing. Also included are private dwellings whose usual residents are temporarily absent on Census Day.
- Private household refers to a person or group of persons (other than foreign residents) who occupy a private
  dwelling and do not have a usual place of residence elsewhere in Canada. The number of private households
  equals the number of occupied private dwellings.

## Housing

- Apartment and other category includes dwelling units found in a wide range of structures such as duplexes and double-duplexes.
- Apartment or flat dwellings are subdivided into two categories.
- Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure.
- Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.
- Bungalow is one storey single-detached dwelling.
- Completion is the stage at which all the proposed construction work on a dwelling unit has been performed.
- **Dwelling** refers to a structurally separate set of living quarters with a private entrance from outside or from a common hallway or stairway inside the building.
- **Mobile** refers to any dwelling designed for movement and actually movable, such as a trailer, railway car or boat, if occupied by persons with no other usual residence on Census Day. If placed on a permanent foundation, it is considered to be "single detached".
- Owned refers to a dwelling which is owned by some member of the household. A dwelling is classified as "owned" even though it may be mortgaged. This also includes dwellings under separate ownership in any multiple dwelling structure.
- Rented refers to a dwelling which is not owned by any member of the household.

- Row category comprises only single-attached houses in a row of three or more dwellings.
- Semi-detached category includes each one of two dwellings separated by a common wall extending from ground to roof, or by a garage.
- **Single detached** type is commonly called a "single house". It includes linked homes which are attached below ground.
- **Start** is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

**Immigrant:** within the framework of this publication, the term immigrant refers to a **landed immigrant**. A landed immigrant is a person who does not have Canadian citizenship but was granted the right by immigration authorities to live in Canada on a permanent basis.

**Imports of goods and services:** current payments for imports of merchandise, travel of Canadians abroad, freight and shipping on foreign account and other services rendered by non-residents.

Income: for data based on tax returns, income is defined as income from the following sources:

- (a) Wages, salaries and commissions;
- (b) Other employment income (tips, gratuities, royalties, etc);
- (c) Net self-employment income;
- (d) Investment income (interest and other investments, dividends);
- (e) Government transfer payments (payments to individuals from provincial and federal governments such as employment insurance, Old Age Security, Goods and Services Tax credit, Canada Child Tax Benefit, family benefits, provincial refundable tax credits, workmen's compensation, social assistance, etc.);
- (f) Private pensions (superannuation and other private pensions);
- (g) RRSP income (for taxfilers aged 65 years or more);
- Other income (net rental income, alimony, income from a limited partnership, retiring allowances, scholarships, etc);

For data based on the 1996 Census, total income refers to the total money income received from the following sources during the calendar year 1995 by persons 15 years of age and over:

- (a) wages and salaries (total);
- (b) net farm income;
- (c) net non-farm income from unincorporated business and/or professional practice;
- (d) federal Child Tax benefits;
- (e) old Age Security pension and Guaranteed Income Supplement;
- (f) benefits from Canada or Quebec Pension Plan;
- (g) benefits from Unemployment Insurance;
- (h) other income from government sources;

- (i) dividends, interest on bonds, deposits and savings certificates, and other investment income;
- (j) retirement pensions, superannuation and annuities, including those from RRSPs and RRIFs;
- (k) other money income.

**Independent retail stores:** all retail outlets not meeting the requirements of a chain store outlet are automatically classified as "independent", the only exception being department stores, which are classified as chain stores.

**Indirect taxes:** taxes which add to the cost of production and are likely to be reflected in market prices paid by the purchaser, such as sales and excise taxes, import duties and property taxes.

**Interest and miscellaneous investment income:** investment income of persons, except dividends, plus government investment income, less net investment income of persons and governments from non-residents, less the transfer portion of interest on the consumer debt, less the interest on the public debt.

**Labour force:** the civilian labour force is composed of that portion of the civilian non-institutional population 15 years of age and over who were employed or unemployed.

**Labour income:** for data based on tax returns, labour income is defined as income from employment, self-employment and from employment insurance.

**Machinery and equipment:** capital expenditures on durable, tangible goods with an expected service life of one year or more, such as furniture, motor vehicles, office machines and equipment not permanently installed (permanently built-in equipment belongs to non-residential construction). Includes installation and delivery costs.

**Manufacturing value added:** consists of revenue from goods manufactured plus net change in inventory of goods in process and finished goods, less cost of materials and supplies, less cost of energy and water utility.

**Market prices:** a valuation expressed in terms of the prices actually paid by the purchaser, that is, after all applicable taxes and subsidies. See **factor cost.** 

**Median age:** the median age is an age "x", such that exactly one half of the population is older than "x" and the other half is younger than "x".

**Median Income:** the median is the middle number in a group of numbers. Where a median income, for example, is given as \$26,000, it means that exactly half of the incomes reported are greater than or equal to \$26,000, and that the other half are less than or equal to the median amount. Median incomes in the data tables are rounded to the nearest hundred dollars. Zero values are not included in the calculation of medians for individuals, but are included in the calculation of medians for families.

For data based on tax returns, median incomes in the data tables are rounded to the nearest hundred dollars. Zero values are not included in the calculation of medians for individuals, but are included in the calculation of medians for families.

Metropolitan areas: See "Census Metropolitan Areas".

## Migration

- Interprovincial migration: represents movement from one province or territory to another involving a permanent change in residence. A person who takes up residence in another province or territory is an **out-migrant** with reference to the province or territory of origin, and an **in-migrant** with reference to the province or territory of destination.
- Net interprovincial migration: represents the difference between in-migrants and out-migrants for a given
  province or territory.

- International migration: represent movement of population between Canada and a foreign country which involves a change in the usual place of residence. A distinction is made with regard to immigrants, emigrants, returning emigrants, net temporary emigrants and net non-permanent residents.
- Net internal migration: sum of net intraprovincial and net interprovincial migration.
- **Net international migration:** is obtained according to the following formula: immigrants + returning emigrants + net non permanent residents (emigrants + net temporary emigration).
- Net intraprovincial migration: represents the difference between in-migrants and out-migrants in a given
  region. A region can be defined as a census division, an economic region or a census metropolitan area.
  Intraprovincial migration represents movements from one region to another within the same province or territory
  involving a permanent change of residence. A person who takes up residence in another province or territory
  is an out-migrant with reference to the region of origin and an in-migrant with reference to the region of
  destination.
- Total net migration: sum of international and net interprovincial migration.
- Net non-permanent residents: represent the variation in the number of non-permanent residents between two dates.
- **Net temporary emigration:** represents the variation in the number of temporary emigrants between two dates. Temporary emigration includes Canadian citizens and immigrants living temporarily abroad who have not maintained a usual place of residence in Canada.

Non-permanent residents: a non permanent resident belongs to one of the five following groups:

- persons residing in Canada claiming refugee status;
- persons residing in Canada who hold a study permit;
- persons residing in Canada who hold a work permit;
- · persons residing in Canada who hold a minister's permit;
- all non-Canadian born dependants of persons claiming refugee status, or of persons holding study permits, work permits or minister's permits and living in Canada.

**Motels:** establishments operating three or more motel-type rooms and less than six hotel / motel-type rooms. Motel rooms are accessible from the exterior only.

**Mother tongue:** the language first learned at home in childhood and still understood by the individual at the time of the Census.

**Natural increase:** variation in population size over a given period as a result of the difference between the numbers of births and deaths.

**Net income of non-farm unincorporated business, including rent:** earnings of unincorporated proprietors, except farm operators, from their own business. Includes the net income of unincorporated businesses and self-employed individuals, as well as the net rental income of persons.

**Net income received by farm operators from farm production:** gross proceeds from the sale of farm products, plus subsidies on a cash basis, plus the imputed value of farm output consumed by farming households, plus investmen in farm inventories, less farm operating expenses and depreciation on farm buildings and equipment. Excludes other types of income, such as net rent or interest receipts, and profits of incorporated farms. See **accrued net income of farm operators from farm production.** 

**Outfitters:** establishments generally located in remote areas where fish and game are available. Such establishments offer accommodation in lodges, cabins and/or campsites and provide essential facilities and services of boat rental, equipment rental, supplies and provisions, and guides.

**Overseas manufactured vehicles:** vehicles imported in a fully assembled state from countries other than the United States or Mexico. If they are assembled on this continent they are treated as being domestically manufactured vehicles.

**Participation rate:** the participation rate represents the labour force as percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

Personal disposable income: personal income less current transfers to government.

**Personal expenditure on consumer goods and services:** household spending on new consumer goods and on consumer services, plus any mark-up on used goods. Operating expenses of associations of individuals serving households are also included, under consumer services.

**Personal income:** the sum of all incomes received by persons residing in Canada, whether factor earnings from current production or current transfers from other sectors, plus the investment income that associations of individuals accumulate on their own behalf or on behalf of persons.

**Personal saving:** personal disposable income less personal expenditure on consumer goods and services, less current transfers from persons to corporations and to non-residents.

**Persons and unincorporated business sector:** Agents of the personal sector plus those of the unincorporated business sector. In the capital and financial account, transactions of these two sectors are consolidated. In addition, in this account, although credit unions, life insurance companies and trusteed pension plans appear as sub-sectors of the corporate and government business enterprise sector, their transactions in financial assets are balanced by liabilities which, in turn, are recorded as assets of the persons and unincorporated business sector.

**Population:** estimated population and population according to the census are both defined as being the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered **non-permanent residents**.

#### Population estimate

- Postcensal: population estimate produced by using data from the most recent available census adjusted for net
  undercoverage and estimate of the components of demographic growth since that last census. This estimate can
  be preliminary, updated or final.
- **Intercensal:** population estimate derived by using postcensal estimates and data adjusted for net undercount of censuses preceding and following the year in question.

**Private dwelling:** a separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or stairway inside the building. The entrance to the dwelling must be one that can be used without passing through the living quarters of someone else. The dwelling must meet the three conditions necessary for year-round occupancy:

- (a) a source of heat or power;
- (b) a source of drinking water;
- (c) an enclosed space that provides shelter from the elements.

## Restaurants, caterers and taverns

- Caterers (industrial, social and mobile): establishments that prepare and serve food and beverages under
  contract, on the premises of manufacturing plants, office buildings, schools, etc. They may also prepare food on
  their own premises for delivery to parties, receptions, etc., and may also serve the food and provide bartending
  services (social caterers). Mobile caterers who drive to changing locations carrying prepared food are also
  included here.
- Licensed restaurants: establishments with a license to sell alcoholic beverages engaged in selling mainly prepared food and all kinds of alcohol, for consumption on the premises.
- **Taverns, bars and night clubs:** establishments which sell alcoholic beverages for consumption on the premises. Food may be sold in minor quantities and entertainment may be provided.

**Retail chain:** a retail chain is defined as an organization operating four or more retail outlets in the same industry class under the same legal ownership at any time during the survey year.

The only exception is **department store** organizations which are treated statistically with retail chains even though they may fail to meet the criterion of four or more retail stores. Any firm not meeting the above definition is automatically classified as an "independent". Franchised stores and voluntary group stores are therefore considered as independent unless they meet all the conditions of the chain definition.

**Retail location:** in general, retail stores have extensive displays of merchandise and use mass-media advertising to attract customers. They typically sell merchandise to the general public for personal or household consumption, but some also serve business and institutional clients.

**Retail trade:** the retail trade sector comprises establishments primarily engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise.

The retailing process is the final step in the distribution of merchandise; retailers are therefore organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers, that is, store and non-store retailers. The Monthly Retail Trade Survey (MRTS) covers only store retailers. Their main characteristics are described below.

Store retailers operate fixed point-of-sale locations, located and designed to attract a high volume of walk-in customers. In general, retail stores have extensive displays of merchandise and use mass-media advertising to attract customers. They typically sell merchandise to the general public for personal or household consumption, but some also serve business and institutional clients. These include establishments such as office supplies stores, computer and software stores, gasoline stations, building material dealers, plumbing supplies stores and electrical supplies stores.

In addition to selling merchandise, some types of store retailers are also engaged in the provision of after-sales services, such as repair and installation. For example, new automobile dealers, electronic and appliance stores and musical instrument and supplies stores often provide repair services, while floor covering stores and window treatment stores often provide installation services. As a general rule, establishments engaged in retailing merchandise and providing after sales services are classified in this sector.

Catalogue sales showrooms, gasoline service stations, and mobile home dealers are treated as store retailers.

**Returning emigrant:** Canadian citizen or immigrant having previously emigrated from Canada and subsequently returned to the country.

Rural areas: rural areas are sparsely populated lands lying outside urban areas.

**Sales:** the total sales of merchandise and receipts from repairs, equipment rental, restaurants and other services, less returns, adjustments and discounts. Trade-in allowances are not deducted. Commissions earned from the sale of goods owned by others and proprietors' withdrawals of goods (at the retail level) for personal use are included. Non-trading revenues, bad debts recovered and direct sales taxes are excluded.

**Self-Employment Income:** for data based on income tax returns, self-employment income is defined as net income from businesses, professional occupations, commissions, farming and fishing.

**Shopping centre:** a shopping centre is composed of a group of stores which are planned, developed and designed as a unit containing a minimum of four retail establishments. A centre must be anchored by a supermarket or a department store and one of the retail outlets must be a member of a chain organization.

• Indoor shopping mall: defined as a group of at least ten retail and service outlets of which four outlets must be and retail and one a restaurant or of which five outlets must be retail located in a complex usually designed primarily for some other purpose (for example, offices, apartments, hotels).

**Supplementary labour income:** employers' social contributions, either compulsory or voluntary. Includes retirement allowances and contributions to employment insurance, the Canada and Quebec Pension Plans, other pension plans, workers' compensation, medicare, dental plans, short- and long-term disability insurance, etc.

**Taxes on factors of production:** these are mandatory payments without consideration, in cash or in kind, collected by government. They apply to production and the import of goods and services, employment of labour and ownership of use of land, structures and other assets used for production purposes. They are payable regardless of quantity or value of the goods and services produced or sold.

**Taxes on products:** these are mandatory payments without consideration, collected by government on the sale of goods and services. These taxes include sales taxes, fuel taxes, import duties and taxes, excise taxes on tobacco and alcohol.

**Taxfilers:** for data based on tax returns, taxfilers are defined as people who filed a tax return for the reference year and were alive at the end of the year. Starting with the 1993 tax year, those taxfilers who died within the tax year and who had a non-filing spouse had their income and their filing status attributed to the surviving spouse.

**Tent and trailer campgrounds:** establishments offering a minimum of 10 tent and trailer spaces.

**Tourist courts and cabins:** establishments with 3 or more accommodation units, the majority of which are cabins or cottages.

**Trading Location:** the trading location is defined as the physical outlet in which retailing or wholesaling activity takes place. The trading location must be capable of providing a limited range of statistics even though they may, in some instances, have to be estimated.

**Transfers:** cash, good, service, or asset other than cash transferred by one transactor to another without counterpart, that is, without the donor receiving anything in return.

**Unattached individuals:** persons living alone or rooming in a household where they are not related to other household members.

Unemployed: the unemployed include persons who, during the reference week:

- (a) were without work, had actively looked for work in the past four weeks (ending with reference week) and were available for work;
- (b) were on temporary layoff with an expectation for recall and were available for work;
- (c) had a new job to start in four weeks or less from the reference week, and were available for work.

**Unemployment rate:** the unemployment rate represents the number of unemployed persons as a per cent of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the unemployment in that group expressed as a percent of the labour force for that group.

**Urban area (UA):** urban areas have minimum population concentrations of 1,000 and a population density of at least 400 per square kilometre, based on the previous census population counts. All territory outside urban areas is considered rural. Taken together, urban and rural areas cover all of Canada.

**Urban centre:** urban centres are composed of census metropolitan areas and Census Agglomerations, often composed of several municipalities or Census Subdivisions.

**Urban core, urban fringe and rural fringe:** the urban core, urban fringe and rural fringe distinguish between central and peripheral urban and rural areas within a **census metropolitan area** or **census agglomeration**.

- An urban core is a large urban area around which a CMA or a CA is delineated. The urban core
  must have a population (based on the previous census) of a least 100,000 in the case of a CMA, or
  between 10,000 and 99,999 in the case of a CA.
- The urban fringe is the urban area within a CMA or CA that is not contiguous to the urban core.
- The rural fringe is all territory within a CMA or CA not classified as urban core or urban fringe.

**Wages and salaries:** total remuneration, in cash or in kind, paid to employees in return for work done. It is recorded on a gross basis, before any deduction for income taxes, pensions, unemployment insurance and other social insurance schemes. Also includes other forms of compensation, namely commissions, tips, bonuses, directors' fees and allowances such as those for holidays and sick leave, as well as military pay and allowances. Excludes employers' social contributions, which are treated as supplementary labour income.

Wholesale Agents and Brokers: wholesale agents and brokers buy and sell merchandise owned by others on a fee or commission basis. They do not take title to the goods they buy or sell, and they generally operate at or from an office location.

Wholesale agents and brokers are known by a variety of trade designations including import-export agents, wholesale commission agents, wholesale brokers, and manufacturer's representatives and agents.

This sector recognizes two main types of wholesalers, that is, wholesale merchants and wholesale agents and brokers.

Wholesale merchants: wholesale merchants buy and sell merchandise on their own account, that is, they take title to the goods they sell. They generally operate from warehouse or office locations and they may ship from their own inventory or arrange for the shipment of goods directly from the supplier to the client. In addition to the sale of goods, they may provide, or arrange for the provision of, logistics, marketing and support services, such as packaging and labelling, inventory management, shipping, handling of warranty claims, in-store or co-op promotions, and product training. Dealers of machinery and equipment, such as dealers of farm machinery and heavy-duty trucks, also fall within this category.

Wholesale merchants are known by a variety of trade designations depending on their relationship with suppliers or customers, or the distribution method they employ. Examples include wholesale merchants, wholesale distributors, drop shippers, rack-jobbers, import-export merchants, buying groups, dealer-owned cooperatives and banner wholesalers.

The first eight subsectors of wholesale trade comprise wholesale merchants. The grouping of these establishments into industry groups and industries is based on the merchandise line or lines supplied by the wholesaler.

**Wholesalers:** this sector comprises establishments primarily engaged in wholesaling merchandise and providing related logistics, marketing and support services. The wholesaling process is generally an intermediate step in the distribution of merchandise; many wholesalers are therefore organized to sell merchandise in large quantities to retailers, and business and institutional clients. However, some wholesalers, in particular those that supply non-consumer capital goods, sell merchandise in single units to final users.

**Work week:** the standard workweek is the number of hours or days of work normally scheduled for the majority of full-time employees.
