## Information to access the product

This product, Catalogue no. 91-002-XIE, is available for free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select Our Products and Services.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1800 263-1136. The service standards are also published on www.statcan.ca under About Statistics Canada > Providing services to Canadians.

## Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## User information

## Symbols

The following standard symbols are used in Statistics Canada publications:
. not available for any reference period
.. not available for a specific reference period
... not applicable
0 true zero or a value rounded to zero
0 s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
p preliminary
r revised
x suppressed to meet the confidentiality requirements of the Statistics Act
E use with caution
F too unreliable to be published

## Notice to readers

Most of the components used to produce preliminary population estimates are estimated using demographic models or based on data sources less complete or reliable, albeit more timely, than those used for updated or final estimates.

## Charts

1. Quarterly estimates of population growth factors, January to March, 1972 to 2006, Canada
2. Quarterly estimates of population growth factors, January to March, 1972 to 2006, Alberta 9
3. Quarterly variation of population estimates, Canada, provinces and territories, January to March, 2005 and 2006

## Highlights

- During the first three months of 2006, Canada's population increased by 78,200 persons, reaching 32,501,100 inhabitants by April 1, 2006 and marking the highest first-quarter increase since 2002.
- Net international migration accounted for nearly three-quarters of Canada's population growth during the first quarter of 2006.
- Alberta's economic growth continues to be a powerful magnet for Canadians from all parts of the country. A record first-quarter net interprovincial migration (of 15,600 persons) boosted Alberta's population by $0.78 \%$, a population growth rate that was three times the national average of $0.24 \%$.
- Due to its strong natural growth, Nunavut (0.66\%) is the only region to have presented a demographic growth similar to Alberta.
- Aside from Alberta and Nunavut, British Columbia (0.30\%) and Ontario (0.25\%) are the only regions posting population growth rates higher than the national average. These two provinces owe their growth to a high net international migration.

## Analysis

During the first three months of 2006, Canada's population increased by 78,200 persons, reaching 32,501,100 inhabitants by April 1, 2006 and marking the greatest first-quarter increase since 2002, when the population grew by 83,400 persons.

Chart 1
Quarterly estimates of population growth factors, January to March, 1972 to 2006, Canada

Immigration remains at high levels. While the number of new arrivals did not match the peaks experienced in 2001 and 2002, the first-quarter average over the past three years $(55,500)$ was still higher than that at any time since the early 1990s.

Thus, net international migration continued to be the main engine of population growth in the country. For example, nearly $75 \%$ of the 2006 first-quarter population growth was the result of population exchanges between Canada and the rest of the world. This percentage has been higher than $70 \%$ since 2001. By comparison, from 1979 to 1984, international migration accounted for only $33.9 \%$ of Canada's average first-quarter population growth.

Moreover, natural increase rose substantially during the first three months of 2006. This had not been seen for a first quarter since 1999. Most of this rise occurred in Quebec and, at a lower scale, in Alberta and British Columbia.

Among Canada's provinces and territories, Alberta continued to have the highest population growth rate. During the first quarter of 2006, Alberta's population increased by $0.78 \%$, a rate that was three times higher than the national average of $0.24 \%$. In terms of absolute numbers, Alberta's population growth (of 25,900 persons) is the highest first-quarter increase ever.

## Chart 2

Quarterly estimates of population growth factors, January to March, 1972 to 2006, Alberta

Aside from Alberta, Nunavut ( $0.66 \%$ ), British Columbia ( $0.30 \%$ ) and Ontario ( $0.25 \%$ ) had population growth rates higher than the national average of $0.24 \%$. Quebec ( $0.17 \%$ ), Manitoba ( $0.11 \%$ ) and Prince Edward Island ( $0.11 \%$ ) also experienced population growths, although at rates lower than the national average.

Except for Prince Edward Island, all the Atlantic provinces showed a population decrease during the first quarter of 2006. The same was true in Saskatchewan, Yukon and the Northwest Territories. In terms of percentages, the Northwest Territories ( $-0.82 \%$ ) experienced the greatest population decrease. Other jurisdictions posting clear population decreases were Newfoundland and Labrador ( $-0.37 \%$ ), Yukon Territory ( $-0.26 \%$ ) and Saskatchewan (-0.20\%).

Chart 3
Quarterly variation of population estimates, Canada, provinces and territories, January to March, 2005 and 2006

In a number of Canada's provinces and territories, net international migration offset the exodus to Alberta. During the first quarter of 2006, in nine of the country's 13 jurisdictions, international migration was the most significant factor affecting population growth (see table series 3). For example, international migration accounted for $80 \%$ of total population growth in British Columbia. That province also had the country's highest net international migration rates $^{1}$ ( 9.5 per 1,000), ahead of Ontario ( 9.3 per 1,000) and Manitoba ( 7.3 per 1,000). In terms of absolute numbers, Manitoba (with 2,200 persons) and Alberta (with 5,300 persons) posted record first-quarter net international migration figures.

While population growth in Alberta was based on interprovincial migration, in Saskatchewan, the Northwest Territories, and particularly Nunavut it was the result of natural increase. In Nunavut, natural increase accounted for $94 \%$ of total 2006 first-quarter population growth.

P Preliminary data.
Note: Preliminary
Note: Preliminary estimates based on data from the Child Tax Benefit (CTB) Program and Fjk factors calculated using 2001-2002, 2002-2003 and 2003-2004 tax file data from Canada Revenue Agency.

## Quality of estimates

## Post-2001 postcensal population estimates

The postcensal estimates contain certain inaccuracies stemming from:
(a) errors in the 2001 Census data (the base population on which these estimates were constructed) and
(b) imperfections in other data sources and the method used to estimate the components.

## Errors in census data

Census data for total population by province or territory are affected by coverage errors. These errors occur when dwellings and/or individuals are missed, incorrectly included or counted more than once. Following each census, Statistics Canada undertakes coverage studies to measure these errors. The main study are the Reverse Record Check Survey (RRC) and the Census Overcoverage Study (COS). Based on these studies, estimates of net undercoverage (which is equal to the difference between undercoverage and overcoverage) are produced. Demography Division adjusts the population enumerated in the census by province and territory using these estimates.
Text table 1
Estimated net undercoverage of population for Canada, provinces and territories, 1996 and 2001 Censuses

|  | $1996{ }^{1}$ |  | $2001{ }^{1}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Rate | Number | Rate |
|  |  | in percent |  | in percent |
| Canada | 712,119 | 2.41 | 958,969 | 3.10 |
| Newfoundland and Labrador | 8,840 | 1.58 | 9,401 | 1.80 |
| Prince Edward Island | 896 | 0.66 | 1,325 | 0.97 |
| Nova Scotia | 21,126 | 2.27 | 24,521 | 2.63 |
| New Brunswick | 14,073 | 1.87 | 20,095 | 2.68 |
| Quebec | 102,680 | 1.42 | 152,880 | 2.07 |
| Ontario | 304,139 | 2.75 | 452,309 | 3.81 |
| Manitoba | 19,052 | 1.68 | 31,013 | 2.70 |
| Saskatchewan | 28,599 | 2.81 | 21,812 | 2.18 |
| Alberta | 71,971 | 2.60 | 74,834 | 2.45 |
| British Columbia | 137,446 | 3.56 | 164,805 | 4.05 |
| Yukon Territory | 467 | 1.50 | 1,423 | 4.73 |
| Northwest Territories | 1,979 | 4.75 | 3,295 | 8.11 |
| Nunavut | 851 | 3.33 | 1,256 | 4.49 |

1. The levels and rates are based on the Reverse Record Check (RRC) and the Overcoverage Study and include non-permanent residents.

The adjustment also incorporates the results of a study on the estimates of the number of people living on incompletely enumerated Indian reserves to complete the corrections for coverage errors in the census. The results of the coverage studies contain mainly sampling errors. For further information regarding the main coverage studies, please see the following document on Statistics Canada's web site: 2001 Census Technical Report on Coverage.

## Errors coming from methodology and other data sources

Errors due to estimation methodologies and data sources other than the census are can also be significant.

Since the law requires the recording of vital statistics, births and deaths data meet very high standards. Nevertheless, since preliminary estimates are derived, they can be slightly different from final estimates.

With respect to immigrants and non-permanent residents, Citizenship and Immigration Canada administers special data files on both of these components. Since immigration is controlled by law (the Immigration Act), data on immigrants and non-permanent residents are compiled upon arrival in Canada. These data represent only "legal" immigration and exclude illegal immigrants. Thus, for the "legal" part of international movement into Canada, the data are considered to be of high quality.

However, some biases such as the difference between the stated province of intended residence at the time of arrival and the actual province of residence, may persist. Finally, since information provided by the Visitor Data System from Citizenship and Immigration Canada is not complete (age and sex of dependents, province of residence for certain groups of permit holders), estimates of nonpermanent residents are more prone to error than data on immigrants.

Estimates of the number of emigrants and returning emigrants are both derived using Child Tax Benefit (CTB) data provided by Canada Revenue Agency (CRA). Data are adjusted to take into account the incomplete coverage of the CTB program and to derive the emigration and returning emigration of adults. These adjustments and the delay in obtaining the data are the two main sources of errors.

As current information on the number of persons living temporarily abroad does not exist, estimates are based on the Reverse Record Check (RRC) and the census. Estimates for the intercensal period, distributed equally among the five years, are maintained constant for the postcensal period. Provincial/territorial distributions are obtained from RRC. Moreover, assumptions were made to allow for the distribution of annual to a quarterly level. Any geographical or quarterly variation may introduce error in the estimation of these components.

While preliminary estimates of interprovincial migration are produced using data from the Child Tax Benefit (CTB) program, final estimates are calculated from the annual taxfile received from Canada Revenue Agency (CRA). Since the two estimates of interprovincial migration are produced from different sources of information, they are more subject to error.

## Quality assessment

In order to assess the quality of our estimates, two evaluation measures are used : precocity errors and errors of closure.

## Precocity errors

The quality of preliminary estimates of components is analysed using precocity errors. Precocity error, which is calculated on a quarterly basis, is defined as the difference between preliminary and final estimate of a particular component in terms of its relative proportion of the total population for the relevant geographical area. It can be calculated for both population and component estimates.

Precocity error allows for useful comparisons between components, as well as between provinces and territories or geographical areas of different population size. Note that when compared to the total population for an area, the differences between preliminary and final estimates of the components are quite small. There are, however, differences in the amount of impact on the population estimates between components and between provinces and territories.

Generally speaking, net interprovincial migration yields the greatest precocity errors. This is likely the result of the use of different data sources for preliminary and final estimates of interprovincial migration. In most years and for most provinces/territories, births, deaths and immigration estimates yielded the smallest precocity errors. For immigration estimates, this reflects the completeness of the data source and the availability of data for the more timely preliminary estimates. In the case of births and deaths, small precocity errors support the use of short-term projections for preliminary estimates.

According to the analysis of the most recent precocity errors and assuming that the quality of the basic data remains constant, the present postcensal estimates should have an acceptable degree of reliability.

Text table 2
Quarterly precocity errors for population and components, Canada, provinces and territories, 2001-2002

## Errors of closure

The error of closure measures the exactness level of the final postcensal estimates. It can be defined as the difference between the enumerated population of the most recent census (after adjustments for net undercoverage) and the most current postcensal population estimates as of census day.

The error of closure comes from two sources: differences in the amount of net undercoverage and errors in the components of population change over the intercensal period. This can be calculated for population estimates and for age, sex and marital status. With each 5-year intercensal period, the error of closure can only be calculated with the release of census data and estimates of net undercoverage.

By dividing the error of closure by the adjusted census population rates are relatively small at the national level ( $0.38 \%$ for 1996 and $0.15 \%$ for 2001). At the provincial and territorial level, differences are understandably larger, since the estimates are also affected by errors in estimating interprovincial migration. Nevertheless, the provincial/territorial final postcensal estimates generally fall within $1 \%$ of the adjusted census population.

Text table 3
Error of closure of the estimates of total population for Canada, provinces and territories, July 1, 1996 and 2001

|  | 1996 |  | 2001 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number | Rate | Number | Rate |
|  |  | in percent |  | in percent |
| Canada | 113,416 | 0.38 | 46,467 | 0.15 |
| Newfoundland and Labrador | 8,840 | 1.58 | 11,416 | 2.19 |
| Prince Edward Island | 411 | 0.30 | 1,481 | 1.08 |
| Nova Scotia | 6,446 | 0.69 | 9,034 | 0.97 |
| New Brunswick | 5,634 | 0.75 | 4,638 | 0.62 |
| Quebec | 96,449 | 1.33 | -320 | 0.00 |
| Ontario | 56,479 | 0.51 | 8,857 | 0.07 |
| Manitoba | -852 | -0.08 | -1,121 | -0.10 |
| Saskatchewan | -7,400 | -0.73 | 15,952 | 1.59 |
| Alberta | -8,124 | -0.29 | 714 | 0.02 |
| British Columbia | -43,313 | -1.12 | -4,357 | -0.11 |
| Yukon Territory | -244 | -0.78 | -354 | -1.18 |
| Northwest Territories | -42 | -0.10 | 481 | 1.18 |
| Nunavut | -868 | -3.39 | 46 | 0.16 |

Note: The error of closure is equal to the July 1 postcensal estimates minus the census count adjusted to July 1 and for net undercount. The percentage is: error of closure, divided by the census count adjusted to July 1 and for net undercount, multiplied by 10

## Explanatory notes for the tables

Table 3
Quarterly population estimates and aggregated demographic components

| Population | Population estimates are final postcensal from July 1, 2001 to July 1, 2002, updated postcensal from October 1, 2002 to April 1, 2005 and preliminary postcensal from July 1, 2005. |
| :---: | :---: |
| Natural increase | Natural increase is final up to December 2002, updated from January 2003 to March 2005 and preliminary from April 2005. |
| Interprovincial migration | Net interprovincial migration numbers are final up to June 2004, updated from July 2004 to March 2005 and preliminary from April 2005. |
| International migration | Net international migration numbers are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005 |
| Total migration | Total net migration numbers are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005 |
| Total growth | Numbers for total growth are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005 |
| Table 4 Quarterly estimates of demographic components |  |
|  |  |
| Births | The numbers of births are final up to December 2003, updated from January 2004 to March 2005 and preliminary from April 2005. |
| Deaths | The numbers of deaths are final up to December 2002, updated from January 2003 to March 2005 and preliminary from April 2005. |
| In-migrants | The numbers of interprovincial in-migrants are final up to June 2004, updated from July 2004 to March 2005 and preliminary from April 2005. |
| Out-migrants | The numbers of interprovincial out-migrants are final up to June 2004, updated from July 2004 to March 2005 and preliminary from April 2005 |
| Immigrants | The numbers of immigrants are final up to December 2002, updated from January 2003 to March 2005 and preliminary from April 2005. |
| Emigrants | The numbers of emigrants are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005. |

Returning emigrants The numbers of returning emigrants are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005.

Net temporary emigrants

Net non-permanent residents

The numbers of net temporary emigrants are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005.

The numbers of net non-permanent residents are final up to June 2002, updated from July 2002 to March 2005 and preliminary from April 2005.

## Appendix I

## Glossary

## Annualized rate

Refers to the ratio of the estimated number of events converted to an annual basis divided by the average quarterly populations. In this respect, birth, death, immigration rates, etc are calculated. Generally, the rate is expressed in per 1,000.

## Census coverage

Net undercoverage: Difference between undercoverage and overcoverage.
Overcoverage: Number of persons who should not have been counted in the census or who were counted more than once.

Undercoverage: Number of persons who were intended to have been enumerated in a census but were not enumerated.

## Components of demographic growth

Any of the classes of events generating population movement variations. Births, deaths and migrations are the components responsible for the variation since they alter the total population.

## Emigrants

Canadian citizen or immigrant who has left Canada to establish a permanent residence in another country.

## Error of closure

Difference between the postcensal estimate for the same date as the census and the results of the census adjusted for net undercoverage.

## Immigrant

Within the framework of this publication, the term immigrant refers to landed immigrant. A landed immigrant is a person who does not have Canadian citizenship but was granted the right by immigration authorities to live in Canada on a permanent basis.oes here

## International migration

International migration represents movement of population between Canada and a foreign country which involves a change in the usual place of residence. A distinction is made with regard to immigrants, emigrants, returning emigrants, net temporary emigrants and net non-permanent residents.

## Interprovincial migration

Interprovincial migration represents movement from one province or territory involving a permanent change in residence. A person who takes up residence in another province or territory is an out-migrant with reference to the province or territory of origin and an in-migrant with reference to the province or territory of destination.

## Natural increase

Variation in population size over a given period as a result of the difference between the numbers of births and deaths.

## Net international migration

Net international migration is obtained according to the following formula: Immigrants + returning emigrants + net non permanent residents- (emigrants + net temporary emigrants)

## Net interprovincial migration

Net interprovincial migration represents the difference between in-migrants and out-migrants for a given province or territory.

## Net non-permanent residents

Net non-permanent residents represent the variation in the number of non-permanent residents between two dates.

## Non-permanent residents

A non permanent resident belongs to one of the five following groups:

- persons residing in Canada claiming refugee status;
- persons residing in Canada who hold a study permit;
- persons residing in Canada who hold a work permit;
- persons residing in Canada who hold a minister's permit;
- all non-Canadian born dependants of persons claiming refugee status, or of persons holding study permits, work permits or minister's permits and living in Canada.

## Net temporary emigration

Net temporary emigration represents the variation in the number of temporary emigrants between two dates. Temporary emigration includes Canadian citizens and immigrants living temporarily abroad who have not maintained a usual place of residence in Canada.

## Population

Estimated population and population according to the census are both defined as being the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered non-permanent residents.

## Population estimate

(a) postcensal: Population estimate produced by using data from the most recent available census adjusted for net undercoverage and estimate of the components of demographic growth since that last census. This estimate can be preliminary, updated or final.
(b) intercensal: Population estimate derived by using postcensal estimates and data adjusted for net undercoverage of censuses preceding and following the year in question.

## Population growth or total growth

Variation of population size between two dates. It can also be obtained by summing the natural increase, total net migration and if possible, residual deviation. It can be positive or negative.

## Residual deviation

Difference between demographic population growth calculated using intercensal estimates of population between two dates and that obtained by the sum of the components for the same period. This deviation results from the distribution of the error of closure between years within the quinquennial period.

## Returning emigrants

Canadian citizen or immigrant having previously emigrated from Canada and subsequently returned to the country.

## Total net migration

Sum of net international and net interprovincial migration.

## Vital events

Includes all the demographic events (that is to say births, deaths, marriages and divorces) for which there exists a legal requirement to inform the Provincial or Territorial Registrar's Office.

## Appendix II

## Source and remarks

## Base population

May 15, 2001 Census of Population, adjusted to July 1 and for net undercount.
Statistics Canada, Census of Canada, 2001, Catalogue no. 93-360-X.

## Births and deaths

Statistics Canada, Health Statistics Division.
Statistics Canada, Demography Division, Catalogue no. 91-002-X, Quarterly, Analytical table 5.

## Immigration

Citizenship and Immigration Canada

## Emigrants

Statistics Canada, Demography Division - from data on emigrant children from the Child Tax Benefit program (CTB) from Canada Revenue Agency files - CRA and data from the "U.S.Department of Homeland Security, Office of Immigration Statistics"

## Returning emigrants

Statistics Canada, Demography Division - based on data from the CTB program and adjustment factors calculated using CRA files.

## Net temporary emigrants

Statistics Canada, Demography Division - based on data from the Reverse Record Check (RRC), 1996 and 2001 Censuses of Canada.

## Non-permanent residents

Statistics Canada, Demography Division - based on data provided by Citizenship and Immigration Canada.

## Interprovincial migration

Statistics Canada, Demography Division - based on the CTB program and adjustment factors calculated using CRA files.

[^0]:    1. Annualized rate. For more details, please refer to the Glossary.
[^1]:    1. The numbers of immigrants are final up to December 2002, updated from January 2003 to March 2005 and preliminary from April 2005.
