## YOUR LINK TO THE HOUSING MARKET

### Province of Quebec

Canada Mortgage and Housing Corporation

[www.cmhc.ca](http://www.cmhc.ca)

#### Small Decrease in First Quarter in Residential Construction in Quebec

After having dropped by 19 per cent in the third quarter and by 15 per cent in the fourth, residential construction in Quebec dipped 3 per cent in the first quarter of 2006, compared with the same period last year. This decrease was attributable to a significant drop in rural housing starts (-50 per cent). As for urban centres, starts were up 8 per cent, thanks to a sharp rise in March, notably in the Montréal region. Thus, the decline in Quebec residential construction continued in the first quarter and translated into 8,523 housing starts during this period.

#### Regionally: a Mixed Picture

As mentioned, a 50-per-cent drop in rural housing starts kept the provincial total in a declining situation in the first quarter. This decrease was observed for both single-detached and multi-housing categories. As well as signalling slowing demand, the recent rural results are explained by modifications made by CMHC to its rural sample in order to better reflect the share these regions represent.

At the urban level, home building evolved in different ways during the

#### HOUSING STARTS

##### Quebec Areas January to March

first quarter. In fact, the first three monthly surveys of the year show that 14 of the 35 urban centres recorded decreases in starts, whereas 20 centres saw rises.

Among the centres recording major gains were the Gatineau (+39 per cent) and Trois-Rivières (+71 per cent) regions, where rises were recorded throughout the quarter, and the Montréal region, whose 9-per-cent rise was obtained thanks to a sharp increase in activity in March. The Drummondville agglomeration (+40 per cent) also registered a notable increase stemming from a spike in multi-family starts.

Notable among centres recording drops were the Québec region (-19 per cent), which saw a slowdown across all market types, and the Sherbrooke region (-17 per cent), whose weakness was confined to the freehold and condominium tenure types.

### **Market Segments: Multi-Family Housing Bounces Back**

The main reason explaining the moderate decrease in housing starts in the first quarter, compared to those of the last two quarters, is the recent strength of multi-family construction during the past three months. Rising by over 17 per cent compared to the first quarter of 2005, building in this market segment (which includes semi-detached and row homes, as well as apartments) owes its rise to the continued activity in the condominium apartment sector. Equally notable in the multi-family category were rental starts; however, it should be pointed out that the rise in this segment came mostly from apartment starts in seniors' residences, a market that has apparently not lost any speed.

### **Resale Market: Slower but Holding On**

While not having the same vigour as in the early 2000s, the resale market remains tenacious. According to the latest results published by the Canadian Real Estate Association (CREA), Quebec recorded 3-per-cent growth compared to the same period last year (20,075 transactions recorded on the Multiple Listing Service (MLS®) during the first quarter of 2006, compared to 19,493 in 2005). This is now the fourth quarter for which resales were greater than in the same period a year earlier. Still according to CREA, the average price of these transactions rose by 6.4 per cent during this same quarter, attaining \$188,835. This latest result is in line with the slowdown that began in the summer of 2004. At that time, average price growth had dropped from 15 per cent to 9 per cent. On the listings side, CREA reports a 12-per-cent increase, which follows the upward trend of the last two years. The course taken by the resale market for over a year (slower sales and price growth, rising listings) brings this market toward a more balanced state. As a consequence, a smaller portion of potential buyers will turn to the new home market.

### **Rental Market: Gradual Easing**

Whereas no official results have been compiled since the last annual survey held in October 2005 (results at the time revealed gradual rises in vacancy rates in most large urban centres), several trends merit attention and are thus useful in the analysis of this market. While the gradual upward trend in rental supply is measurable, that of demand is much less so because of the conflicting directions of several fundamental factors. The stimulatory effects of current migration levels and the higher price of substitute housing choices are

dampened by a weaker job market, making the net effect on demand unclear. That being said, it is expected that the rental market will pursue its gradual easing in 2006.

### **Economy: Moderate Growth**

As for previous quarters, the recent cooling in Quebec's housing markets is largely explained by a corresponding economic slowdown in prior periods, notably by weaker job growth. Currently, the economic landscape has not changed significantly. According to the first results for 2006, GDP growth remains moderate, while employment is growing at around 1 per cent. As we mentioned in previous editions of *Housing Now*, domestic demand and private sector investment in fixed capital are the main engines of Quebec's economy at the present time. The weak point remains the province's export sector, which continues to feel the effects of a higher Canadian dollar and rising energy costs.

### **Migration: Western Canada Drawing Power Has Effects in Quebec**

According to the latest results from Statistics Canada, Quebec's net migration reached 2,213 during the last three months of 2005, a 38-per-cent drop from the same quarter in 2004. This result brought annual net migration to 28,990, a 17-per-cent drop from 2004. The most noticeable feature of Quebec's migration in 2005 was the interprovincial level. Attaining a deficit of 4,670 compared to 1,870 in 2004, the interprovincial balance was marked by an 18-per-cent rise in migration toward other provinces.

## Construction Times

Residential construction times have been on an upward trend in Quebec for the past several years. Overall, in Quebec's major urban areas, it took an average of one and a half months longer to build a home in 2004 than it did in the 1990s.

### Differences related to building size

The construction time mentioned above applies to all building sizes combined. Even though times increased for both single-detached homes and apartment buildings, the phenomenon is naturally more significant for larger buildings. On average, construction times are 1.4 months longer for single-detached houses and 2.7 months longer for larger buildings (50 to 99 units). Also, if the average time for 2004 is adjusted to take into account the dwellings started that year and still under construction, then this average went up by 3.9 months in relation to 1997 for buildings with 50 to 99 units.

### Among the causes

In 1996, residential construction bottomed out in Quebec. In the years that followed, the starts volume rose steadily and even started climbing significantly at the beginning of the current decade. The increase

in demand for new dwellings was such that supply could not keep up at times, for lack of labour. For builders, it is all the more difficult to find skilled trades during peak periods, as the wages, which are higher in the non-residential sector, often incite skilled workers to opt for the better-paying job<sup>1</sup>.

### Consequences

The longer construction times result in significant costs. First, they increase borrowing costs for builders and consequently raise home prices. Second, when buyers must vacate their current dwelling by a specific date, they must find temporary housing elsewhere if their new home is not ready on time (however, the different warranty programs cover a portion of these costs for buyers of dwellings contained in buildings with fewer than four storeys).

### Change ahead

With the expected slowdown in construction and the innovations in construction methods, the situation should change over the coming years. Already, in 2005, the situation no longer felt as critical as in the previous three years. While the data for 2005 seems to be indicating a significant decrease in construction times, we will therefore have to wait several more

### Methodological note

Construction times correspond to the difference between the date (year/month) when buildings were completed and the date when they were started and are therefore rounded to the nearest month. The calculation includes buildings that were started and completed before April 2006. In the case of buildings that have not yet been completed, the times are equal to the difference between the date when they were started and April 2006. These are consequently preliminary times and they could increase. The data reflects the situation in areas with 50,000 or more inhabitants only, as completions are not monitored for smaller areas. CMHC must have received the building permits issued by the municipalities before enumerating the starts. Since constructions sometimes get under way before the permits are received, the calculated construction times may therefore be slightly underestimated.

months before getting the real picture for 2005, as close to 3,000 buildings started last year are still under construction.

<sup>1</sup> For more details, see the *Research Highlights* issue entitled *Skills Shortages in the Residential Construction Industry*.

## Definition and Concepts

**Intended Markets** - There are three: the Freehold market refers to Single-Family Houses (Detached, Semi-Detached and Row) owned under freehold tenure; the condominium segment comprises houses and apartments held under divided co-ownership; and finally the rental market encompasses apartment dwellings.

**Housing Starts** - refer to the beginning of construction work on a building, usually when the concrete has been laid for the entire footing around the structure, or at an equivalent stage where a basement will not be a part of the structure.

**Under Construction** - units that have been started but that are not completed. The number of units under construction at the end of a period may take into account certain adjustments that took place, for various reasons, after the starts were reported.

**Completions** - units where all proposed construction work has been performed or, in some cases, where ninety percent of all construction work is completed and the structure is fit for occupancy.

**Unoccupied Units** - new completed units that have remained unoccupied.

**Total Medium-Term Supply** - total supply of new units including units under construction, units that are completed but not occupied and permits issued but not started.

**Absorptions** - newly completed units that have been sold or rented. The number of absorptions is obtained from a survey initiated when the structure is completed. Units presold or pre-leased are not included until the completion stage. The number of absorbed units is the number of completed and unoccupied units from the previous quarter plus completions for the current month minus completed and unoccupied units for the current month.

**Duration of Inventory** - period necessary for the absorption of unoccupied units, i.e. the ratio between unoccupied units and absorbed units (average for the last twelve months). This figure is expressed in months.

**Seasonally Adjusted Annual Rates (SAAR)** - raw monthly figures, adjusted to remove normal seasonal variation and multiplied by 12.

**NOTE TO READERS:** Prior to July 2002, the CMHC Starts and Completions Survey consisted of a monthly enumeration of new housing activity in urban centres with a population of 10,000 persons and over. As of July 2002, the survey will be conducted monthly in urban centres with a population of 50,000 persons and over and quarterly in urban centres with a population of 10,000 to 49,999 persons. Statistical models will be used to estimate provincial and national housing starts in urban centres with a population of 10,000 persons and over, on a monthly basis. The methodology is unchanged for estimating housing starts in rural areas (areas other than urban centres with a population of 10,000 persons and over). In these areas, a sample survey is used on a quarterly basis. As was the case in the past, statistical models continue to be used to estimate national housing starts in all areas on a monthly basis.

# CMHC – HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for over 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.

For more information, visit our website at [www.cmhc.ca](http://www.cmhc.ca)

You can also reach us by phone at 1 800 668-2642 or by fax at 1 800 245-9274.

Outside Canada call (613) 748-2003 or fax to (613) 748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1 800 668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for **free** on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to [www.cmhc.ca/housingmarketinformation](http://www.cmhc.ca/housingmarketinformation)

For more information on MAC and the wealth of housing market information available to you, visit us today at [www.cmhc.ca/housingmarketinformation](http://www.cmhc.ca/housingmarketinformation)

To subscribe to priced, printed editions of the national standardized product suite or regional specialty publications, call 1 800 668-2642.

CMHC grants reasonable rights of use of this publication's content solely for personal, corporate or public policy research, and educational purposes. This permission consists of the right to use the content for general reference purposes in written analyses and in the reporting of results, conclusions, and forecasts including the citation of limited amounts of supporting data extracted from this publication. Reasonable and limited rights of use are also permitted in commercial publications subject to the above criteria, and CMHC's right to request that such use be discontinued for any reason.

Any use of the publication's content must include the source of the information, including statistical data, acknowledged as follows:

Source: CMHC (or "Adapted from CMHC," if appropriate), name of product, year and date of publication issue.

Other than as outlined above, the content of the publication cannot be reproduced or transmitted to any person or, if acquired by an organization, to users outside the organization. Placing the publication, in whole or part, on a website accessible to the public or on any website accessible to persons not directly employed by the organization is not permitted. To use the content of any CMHC Market Analysis publication for any purpose other than the general reference purposes set out above or to request permission to reproduce large portions of, or entire CMHC Market Analysis publications, please contact: the Canadian Housing Information Centre (CHIC) at [chic@cmhc.gc.ca](mailto:chic@cmhc.gc.ca); (613) 748-2367 or 1 800 668-2642

For permission, please use the following information:  
Publication's name, year and date of issue.

Without limiting the generality of the foregoing, no portion of the content may be translated from English or French into any other language without the prior written permission of Canada Mortgage and Housing Corporation.

The information, analyses and opinions contained in this publication are based on various sources believed to be reliable, but their accuracy cannot be guaranteed. The information, analyses and opinions shall not be taken as representations for which Canada Mortgage and Housing Corporation or any of its employees shall incur responsibility.
