

# RENTAL MARKET REPORT

## Toronto CMA

Date Released: December 2006

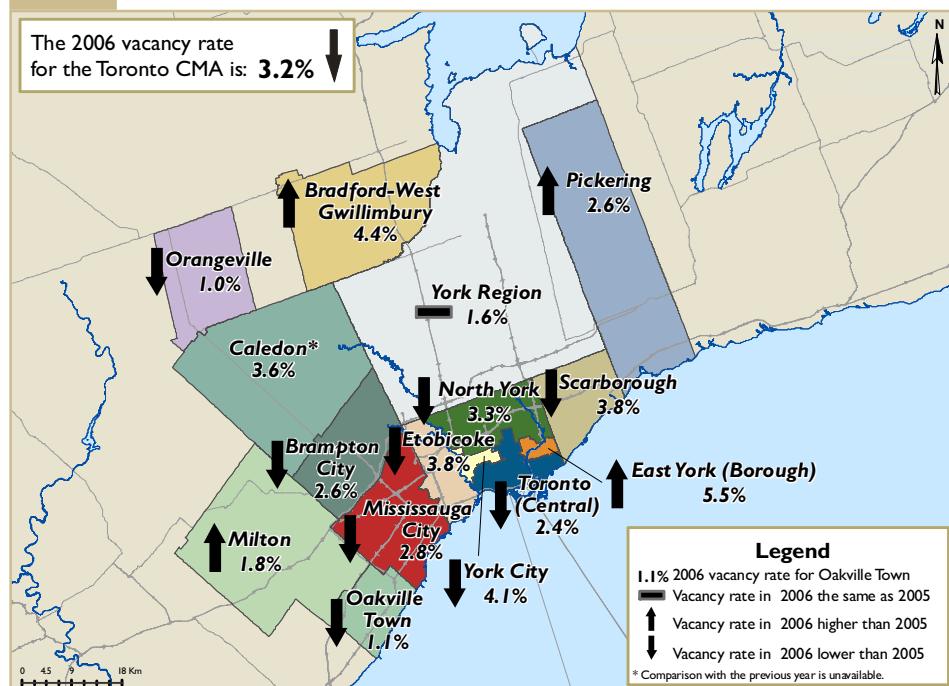

### Report Highlights

The Toronto Census Metropolitan Area (CMA) average apartment vacancy rate declined to 3.2 per cent in 2006 - continuing to trend downward from a peak of 4.3 per cent reached in 2004. Average apartment rents increased, but still at a rate below inflation.

Demand for rental accommodation strengthened due to maturing demand for home ownership, a high level of youth employment and continued immigration into the Toronto area.

The rental market will become tighter in 2007. The average apartment vacancy rate will edge lower to 2.5 per cent and rents will grow, on average, at the rate of inflation.

Figure 2

cost of condominium apartment ownership and renting, for example, remained in a range between \$80 and \$150. Due to rising home prices and mortgage rates, the gap widened substantially beginning in the second half of 2005. Based on 2006 estimates, the difference between the average mortgage carrying cost and average rent will be more than \$250. As the cost gap increased, many households considering home ownership put their decision to purchase on hold.

High home ownership costs have had a greater impact on the first-time buyer segment of the market. According to CMHC's Consumer Intentions to Buy and Renovate Survey, 75 per cent of households intending to purchase a home in 2002 were planning on moving from rental housing. Vacancy rates jumped the most during this period. Only 49 per cent of households intending to purchase a home in 2006 were living in rental accommodation.

## Rental Market Tightened

Demand for rental housing in the Toronto CMA increased in 2006. The average apartment vacancy rate continued to trend lower from a 2004 peak. In response to tightening rental market conditions, average apartment rents increased at a greater rate than in 2005.

An increasing number of new households forming or moving into the Toronto area chose renting over the past year. Of particular importance to the increased attractiveness of rental relative to home ownership is the widening gap between the average owner's principal and interest payment, and the average rent. Between 2000 and 2004, the gap between the average

A number of factors contributed to increased interest in rental housing. These factors included maturing demand for home ownership, a relatively high level of youth employment and the dominance of immigration as a source of population growth.

## Fewer People Chose Ownership

A combination of slower population growth and rising mortgage carrying costs has stalled existing and new home sales. Fewer rental households were in the market to purchase a home.

Figure 3

Figure 4

## Youth Employment Boosts Rental Demand

It is important to note that the labour market remains very tight in the Toronto area. The unemployment rate is very low historically, which means that the majority of people who want to work are employed.

Young people reaped the benefits of tight labour market conditions in 2006. The average number of youth (i.e. individuals aged 15 to 24) employed through the first three quarters of the year grew at a rate of almost 11 per cent compared to the same period in 2005 - a rate much higher than the average for employment across all age groups. It should be noted that total youth employment growth has been driven by the creation of full-time jobs. Over the same time frame, the average number of youth employed on a full-time basis increased by approximately 16 per cent compared to six per cent for part-time youth jobs.

More jobs amongst youth can also be explained, in part, by the growth in

youth population resulting from the baby boom echo (those individuals born between the mid-1980s and mid-1990s).

Above average full-time youth employment growth arguably prompted many young people to decouple from their parents over the past year and form a new household of their own. The great majority of these youth decided to take up accommodation in the rental market.

Purchasing a home tends to be difficult for youth, due to lack of a sufficient down-payment and/or insufficient income to comfortably cover the required mortgage payments and other expenses.

## Immigrants Dominate Population Growth

New immigrant households moving into the metropolitan area contributed to the tightening rental market conditions in 2006.

The Toronto CMA experienced a net gain in population growth over the past year. Immigration was the major driver of this growth, more than off-setting out-migration of households into surrounding centres and other provinces. Well-established ethnic networks and a more diverse array of job opportunities, relative to many other Canadian metropolitan areas, continued to attract international migrants.

Figure 5

According to the Longitudinal Survey of Immigrants to Canada undertaken by Statistics Canada, 75 per cent of new immigrant households settling in Canada initially choose the rental market to satisfy their housing needs. Initially, many of these households do not possess the employment, savings or credit rating required to move directly into the home ownership market.

## Rent Growth Below Inflation

This year, CMHC is introducing a measure for the change in rents for existing structures. By focusing on existing structures, we can exclude the impact of new structures added to the rental universe between surveys and conversions and get a better indication of the rent increase in existing structures. For the Toronto CMA, the average rent for a two-bedroom apartment in existing structures increased by 1.1 per cent in October 2006 compared to a year ago, below the rate of inflation. Over the same period, average annual growth in wages and salaries exceeded inflation in the Toronto area. This suggests that, for some renter households, rent as a percentage of wages and salaries declined over the past year.

Lower rental housing costs relative to income not only served to heighten overall demand for rental housing, but may have also affected the type and quality of rental accommodation in which households chose to live. Vacancy rates were lowest for more expensive rental apartments.

## Strong Demand Offsets Increased Rental Supply

Rental apartment completions for the 12 months ending September 2006 increased 82 per cent to over 1,700 units compared to the same period ending in 2005. Much of the new supply was accounted for by developments that catered to the higher-end of the rental market, with unit finishings and amenities comparable to recently completed condominium apartments. The fact that vacancy rates declined for all rental apartments and higher end units in particular, even with a growing rental stock, is further testament to the increased demand for rental housing in 2006.

## Availability Follows Vacancy Trends

Availability rate refers to the percentage of units that are either vacant or for which notice to move

has been received from or given to the current tenant and for which a lease has not been signed by a new tenant. The availability rate provides a broader measure of the supply of units a landlord has available to market to prospective tenants. As a result, availability rates tend to be higher than vacancy rates.

Availability rate trends have followed those observed in relation to the vacancy rate in the metropolitan area. Positive or negative changes in the vacancy rate, by bedroom type, were matched by the same direction of change in availability.

## Renting Popular in Former City of Toronto

Low vacancy rates in the former City of Toronto, relative to the amalgamated City and the CMA as a whole, point to strong rental demand in this sub-market. The vacancy rate in the former City in 2006 declined to 2.4 per cent in 2006 from three

Figure 6

Figure 7

per cent in 2005. This vacancy rate is almost one percentage point lower than the average for the metropolitan area as a whole.

A number of factors contributed to stronger rental demand in the former City. First, a broad diversity of amenities is available to households. These amenities include access to all major modes of public transportation, proximity to a wide array of cultural and recreational opportunities, a broad array of consumer and social services, and numerous employment opportunities across many sectors of the economy. Second, the cost of home ownership is well above the CMA average, with the average resale price for all home types at approximately \$450,000 versus slightly more than \$350,000 for the CMA. Higher than average home prices result in higher mortgage carrying costs. Many households wishing to live in the former City must rent, at least until a greater down payment is accumulated in order to bring carrying costs down to a manageable level.

## Demand for Rental Row Housing Lower

The average vacancy rate for rental row houses in the CMA was higher than the average for rental apartments, at 4.3 per cent versus 3.2 per cent. The relationship between the cost of renting and the cost of home ownership is a key factor underlying the higher vacancy rate for this home type. The average rent for a row house, at \$1,226, is approximately \$240 greater than that for an apartment. This rent level is closer to the average mortgage carrying cost for ownership housing in the CMA, especially if a less-expensive row house or condominium apartment is considered.

## Rental Market Outlook for 2007

Demand for rental housing will continue to increase in 2007. The vacancy rate will edge lower for the

third straight year to 2.5 per cent. Fewer vacant units will prompt further rent increases on the part of rental property owners and/or managers. The average rent for a two-bedroom apartment will move up to \$1,086.

The gap between the average rent and average mortgage carrying cost will widen further in 2007. As the population in the Toronto area continues to grow, through net-immigration, and young people continue to decouple from their parents, the share of households choosing to rent rather than own will increase.

Strong condominium apartment completions in 2006 and moving forward into 2007 will moderate the decline in the vacancy rate. The impact will be two-fold. First, renter households who purchased condominium apartments at the pre-construction stage over the past two to three years will move out of their rental accommodation in order to take occupancy of their new ownership housing. Second, investor-held condominium apartments will continue to compete with units in the purpose-built rental market. Some renters will continue to be attracted to rental condominium apartments, many of which offer a higher level of finishings and a broader array of amenities.

## Secondary Rental Market

CMHC's October Rental Market Survey, which covers private row and apartment structures with three or

more units, is being expanded to include information on the secondary rental market. More specifically, CMHC will now provide information on apartment condominiums offered for rent in the following centres: Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal and Québec. The additional information should help to provide a more complete overview of the rental markets in those centres. Also, for the Vancouver, Toronto and Montréal CMAs, the following types of units are now surveyed:

- rented single-detached houses;
- rented double (semi-detached) houses;
- rented freehold row/town houses;
- rented duplex apartments;
- rented accessory apartments; and
- rented apartments which are part of a commercial or other type of structure containing one or two dwelling units.

The methodology section at the end of this report provides more detailed information on the Secondary Rental Market Survey.

## Condominium Apartment Rental Market

### Stock of Rental Apartments Increases

Condominium apartment completions have approached record levels over the past two years. The number of apartments registered under condominium corporations increased to 205,140 in 2006.

While the majority of registered apartments are owned by end users, it is important to note that the share held by investors and rented out edged up to 20.3 per cent compared to 18.6 per cent in 2005. The increased rental share was attributable to a greater proportion of investor ownership in new registered stock entering the survey. Those condominium apartment buildings that were included in both the 2005 and 2006 surveys (i.e. the matched sample) experienced a decline in the rental rate.

The share of investor-held units is substantially lower today compared to the mid-1990s, when it was estimated that at least one-third of the registered stock was held by investors and rented out. Between 1995 and 2002, many investor-held units were listed for sale as the price of apartments increased rapidly and investors took advantage of capital gains. Investors were able to sell their units to end users, as the

demand for home ownership was increasing over the same period.

### Condominium Vacancy Rate Very Low

The vacancy rate for rented condominium apartments, at 0.4 per cent, was much lower than that for purpose-built rental apartments in 2006. Condominium apartments represent a viable alternative to purpose-built stock, especially at the higher end of the market. Many renter households searching for modern unit design coupled with luxury finishings and amenities have turned to the condominium component of the secondary rental market.

### Conditions Improve for Investors

The outlook for investors intending to purchase and rent out a condominium apartment appears

Figure 8

positive. The average rent for two-bedroom condominium apartments, at \$1,487, is 39 per cent higher than the average for purpose-built two-bedroom rental apartments. The comparatively low condominium apartment vacancy rate suggests investors will be able to raise rents at a rate at or above inflation going forward.

## Other Secondary Rental Types

Rented single-detached, semi-detached, town homes, duplexes and accessory suites represent a large component of the total rental market in the Toronto area. The number of rental units in these categories is estimated at approximately 156,123.

Average rents for these home types are higher than those observed for purpose-built rental apartments, but less than those observed for purpose-built rental town homes and rented condominium apartments. The differences in average rents are likely the result of different unit sizes, quality of finishing and location.

## National Rental Vacancy Rate Inches Down to 2.6 Per Cent

The average rental apartment vacancy rate in Canada's 28 major centres decreased slightly by 0.1 of a percentage point to 2.6 per cent in October 2006 compared to last year.

Solid job creation and healthy income gains helped to strengthen demand for both ownership and rental housing. High levels of immigration were a key driver of rental demand in 2006, as was the increasing gap between the cost of home ownership and renting. These factors have put downward pressure on vacancy rates over the past year.

On the other hand, home ownership demand remained very strong, which can be seen from the near record level of existing home sales and the high level of housing starts in 2006. Strong home ownership demand continues to apply upward pressure on vacancy rates. Adding to this is the high level of condominium completions in some centres. Condominiums are a relatively inexpensive type of housing for renters moving to home ownership. Also, some condominium apartments are owned by investors who rent them out. Therefore, high levels of condominium completions have created competition for the rental market and have put upward pressure on vacancy rates.

The centres with the highest vacancy rates in 2006 were Windsor (10.4 per cent), Saint John (NB) (6.8 per cent), and St. John's (NFLD) (5.1 per cent). On the other hand, the major urban centres with the lowest vacancy rates were Calgary (0.5 per cent), Victoria (0.5 per cent), and Vancouver (0.7 per cent).

The highest average monthly rents for two-bedroom apartments in new and existing structures were in Toronto (\$1,067) and Vancouver (\$1,045), followed by Calgary (\$960) and Ottawa (\$941). The lowest average monthly rents for two-bedroom apartments in new and existing structures were in Trois-Rivières (\$488) and Saguenay (\$485).

By excluding the impact of new structures added to the universe since the last survey and conversions from the calculation, we can get a better indication of the rent increase in existing structures. Overall, the average rent for two-bedroom apartments in existing structures across Canada's 28 major centres increased by 3.2 per cent between October 2005 and October 2006. The greatest rent increases occurred in Calgary where rents were up 19.5 per cent and in Edmonton where rents increased by 9.9 per cent. Excluding Calgary and Edmonton, the average rent for two-bedroom apartments in existing

Apartment Vacancy Rates (%) by Major Centres		
	2005	2006
Abbotsford	3.8	2.0
Calgary	1.6	0.5

Windsor	10.3	10.4
Winnipeg	1.7	1.3
<b>Total</b>	<b>2.7</b>	<b>2.6</b>

structures was up only 2.4 per cent in 2006 compared to 2005.

In 2006, vacancy rates for rental condominium apartments were below one per cent in five of the seven centres surveyed (Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal, and Québec). Rental condominiums in Vancouver and Toronto had the lowest vacancy rate at 0.4 per

cent. On the other hand, Québec and Montréal registered the highest vacancy rates for condominium apartments at 1.2 per cent and 2.8 per cent in 2006, respectively. The survey showed that vacancy rates for rental condominium apartments in 2006 were lower than vacancy rates in the conventional rental market in all the surveyed centres, except Montréal. The highest average monthly rents for two-bedroom condominium apartments were in Toronto (\$1,487), Vancouver (\$1,273), and Calgary (\$1,257). All surveyed centres posted average monthly rents for two-bedroom condominium apartments that were higher than average monthly

rents for two-bedroom private apartments in the conventional rental market in 2006.

Also, the average monthly rent for a two-bedroom unit in the secondary rental market (dwelling types other than private apartments such as duplexes and accessory apartments) was lower than the average rent in both the conventional and condominium apartment markets in Montréal and Vancouver. In Toronto, the average monthly rent for a two-bedroom unit in the secondary rental market was slightly higher than in the conventional rental market.

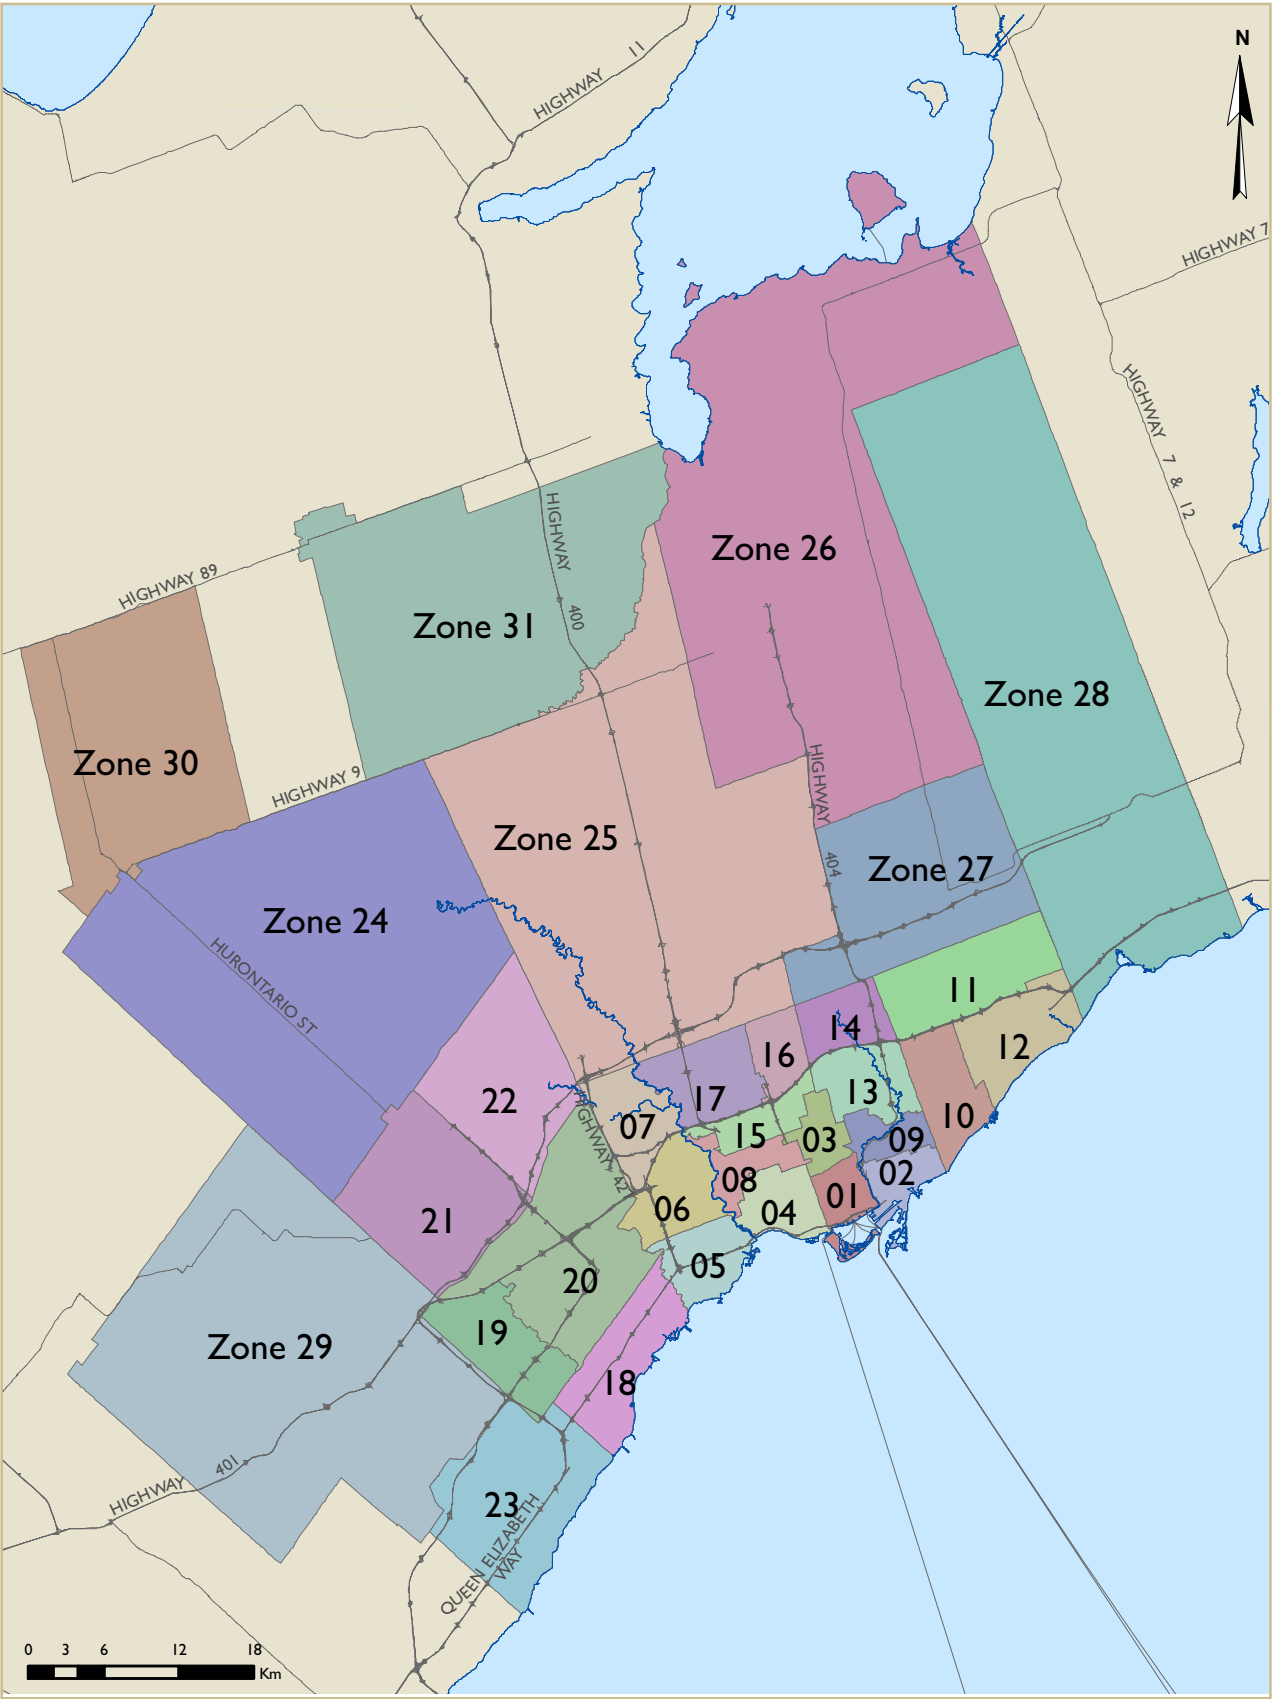

1 Major centres are based on Statistics Canada Census Metropolitan Areas (CMAs) with the exception of the Ottawa-Gatineau CMA which is treated as two centres for Rental Market Survey purposes.

2 CMHC's October Rental Market Survey, which covers private row and apartment structures with three or more units, is being expanded to include information on the secondary rental market. More specifically, for the Vancouver, Toronto and Montréal CMAs, the following types of units are now surveyed:

- rented single-detached houses;
- rented double (semi-detached) houses;
- rented freehold row/town houses;
- rented duplex apartments;
- rented accessory apartments;
- rented apartments which are part of a commercial or other type of structure containing one or two dwelling units.

## Rental Market Survey – Now Also Done in the Spring

Starting in 2007, CMHC will be conducting a rental market survey in the spring, in addition to the one conducted in the fall. The results of the spring survey will be published in June and will provide centre-level information on key rental market indicators such as vacancy rates and average rents. This will give users access to more timely information on market trends.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The data collected for a structure depends on whether it is an apartment or a row structure. The survey collects market rent, available and vacant unit data for all sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. This year, CMHC is also introducing a new measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the 2005 and 2006 Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights and in the narrative section of the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

In 2006, rented condominium apartments were surveyed in the following CMAs: Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal and Québec. Other secondary rental market units were surveyed in Vancouver, Toronto and Montréal.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### **Definitions of Census Areas referred to in this publication are as follows:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

### **Acknowledgement**

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

# CMHC – HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for over 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.

## NEW SURVEYS AND NEW REPORTS

We Consulted ... Clients Spoke ... We Listened

### Announcing enhancements to CMHC's Market Analysis Products and Services

#### Clients told us

that Canada Mortgage and Housing Corporation (CMHC) products and services are their best source of housing market information. They rely on them for comprehensive and up-to-date facts and forecasts. Clients also pointed out ways to make our products even better.

- Secondary Rental Market Information
- Additional Spring Rental Market Survey
- Annual Renovation Expenditure Survey Covering 10 Major Centres
- Publications for Additional Centres

#### Find out More!

Starting December 2006 and throughout 2007, CMHC will introduce enhancements to benefit all market participants. To find out more visit our website regularly and subscribe to CMHC's FREE Market Analysis electronic products at: [www.cmhc.ca/housingmarketinformation](http://www.cmhc.ca/housingmarketinformation)
