List of Data Tables

Series A—Summary Data, Canada

- 1 Total Health Expenditure, Canada, 1975 to 2001—Summary
- 2.1–.3 Total Health Expenditure by Source of Finance, Canada, 1975 to 2001— Current Dollars
- 2.4–.5 Total Health Expenditure by Source of Finance, Canada, 1975 to 2001—Constant Dollars
- 3.1.1–.3 Total Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 3.2.1–.3 Private Sector Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 3.3.1–.3 Public Sector Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars

Series B—Total Health Expenditure by Source of Finance, by Province/Territory and Canada

- 1.1–.2 Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
- 1.3 Total Health Expenditure as a Percent of (Provincial/Territorial) G.D.P., 1975 to 2001–Current Dollars
- 1.4–.5 Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Constant Dollars
- 2.1–.2 Private Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
- 2.3 Private Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars
- 2.4–.5 Private Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Constant Dollars
- 3.1–.2 Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
- Public Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars
- 3.4–.5 Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Constant Dollars

Series B—Total Health Expenditure by Source of Finance, by Province/Territory and Canada (cont'd)

4.1–.2	Provincial/Territorial Government Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
4.3	Provincial/Territorial Government Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
4.4	Total Provincial/Territorial Government Health Expenditure as a Proportion of Total Provincial Government Programs, by Province/Territory and Canada, 1975 to 2000—Current Dollars
4.5	Total Provincial/Territorial Government Health Expenditure as a Proportion of Total Provincial Government Expenditures, by Province/Territory and Canada, 1975 to 2000—Current Dollars
4.67	Provincial/Territorial Government Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Constant Dollars
5.1–.2	Other Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
5.3	Other Public Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
5.4–.5	Other Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Constant Dollars
6.1–.2	Federal Direct Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
6.3	Federal Direct Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001—Current Dollars
6.4–.5	Federal Direct Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Constant Dollars
7.1–.2	Municipal Government Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars
7.3	Municipal Government Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars
7.4–.5	Municipal Government Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Constant Dollars
8.1–.2	Social Security Funds Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars

Series B— Total Health Expenditure by Source of Finance, by Province/Territory and Canada (cont'd)

- 8.3 Social Security Funds Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Current Dollars
- 8 .4-.5 Social Security Funds Health Expenditure, by Province/Territory and Canada, 1975 to 2001–Constant Dollars

Series C—Health Expenditure by Use of Funds, by Source of Finance, Canada

- 1.1–.3 Total Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 1.4 Public and Private Share of Total Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 2.1–.3 Private Sector Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 2.4 Private Sector Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars
- 3.1–.3 Public Sector Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- Public Sector Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001–Current Dollars
- 4.1–.3 Provincial/Territorial Government Sector Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 4.4 Provincial/Territorial Government Sector Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars
- 5.1–.3 Other Public Sector Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- Other Public Sector Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars
- 6.1–.3 Federal Direct Health Expenditure by Use of Funds, Canada, 1975 to 2001— Current Dollars
- 6.4 Federal Direct Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars
- 7.1–.3 Municipal Government Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 7.4 Municipal Government Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars

Series C— Health Expenditure by Use of Funds, by Source of Finance, Canada (cont'd)

- 8.1–.3 Social Security Funds Health Expenditure by Use of Funds, Canada, 1975 to 2001—Current Dollars
- 8.4 Social Security Funds Health Expenditure by Use of Funds, as a Percent of Total, Canada, 1975 to 2001—Current Dollars

Series D—Health Expenditure by Use of Funds, by Source of Finance, by Province/Territory

- 1.1.1–.3 Total Health Expenditure by Use of Funds, Newfoundland, 1975 to 2001—Current Dollars
- 1.2.1–.3 Total Health Expenditure by Use of Funds, Prince Edward Island, 1975 to 2001—Current Dollars
- 1.3.1–.3 Total Health Expenditure by Use of Funds, Nova Scotia, 1975 to 2001— Current Dollars
- 1.4.1–.3 Total Health Expenditure by Use of Funds, New Brunswick, 1975 to 2001— Current Dollars
- 1.5.1–.3 Total Health Expenditure by Use of Funds, Quebec, 1975 to 2001—Current Dollars
- 1.6.1–.3 Total Health Expenditure by Use of Funds, Ontario, 1975 to 2001—Current Dollars
- 1.7.1–.3 Total Health Expenditure by Use of Funds, Manitoba, 1975 to 2001—Current Dollars
- 1.8.1–.3 Total Health Expenditure by Use of Funds, Saskatchewan, 1975 to 2001—Current Dollars
- 1.9.1–.3 Total Health Expenditure by Use of Funds, Alberta, 1975 to 2001—Current Dollars
- 1.10.1–.3 Total Health Expenditure by Use of Funds, British Columbia, 1975 to 2001— Current Dollars
- 1.11.1–.3 Total Health Expenditure by Use of Funds, Yukon Territory, 1975 to 2001— Current Dollars
- 1.12.1–.3 Total Health Expenditure by Use of Funds, Northwest Territories, 1975 to 2001—Current Dollars
- 1.13.1–.3 Total Health Expenditure by Use of Funds, Nunavut Territory, 1975 to 2001— Current Dollars
- 2.1.1–.3 Private Sector Health Expenditure by Use of Funds, Newfoundland, 1975 to 2001—Current Dollars
- 2.2.1–.3 Private Sector Health Expenditure by Use of Funds, Prince Edward Island, 1975 to 2001—Current Dollars

Series D—Health Expenditure by Use of Funds, by Source of Finance, by Province/Territory (cont'd)

- 2.3.1–.3 Private Sector Health Expenditure by Use of Funds, Nova Scotia, 1975 to 2001—Current Dollars
- 2.4.1–.3 Private Sector Health Expenditure by Use of Funds, New Brunswick, 1975 to 2001—Current Dollars
- 2.5.1–.3 Private Sector Health Expenditure by Use of Funds, Quebec, 1975 to 2001—Current Dollars
- 2.6.1–.3 Private Sector Health Expenditure by Use of Funds, Ontario, 1975 to 2001—Current Dollars
- 2.7.1–.3 Private Sector Health Expenditure by Use of Funds, Manitoba, 1975 to 2001– Current Dollars
- 2.8.1–.3 Private Sector Health Expenditure by Use of Funds, Saskatchewan, 1975 to 2001—Current Dollars
- 2.9.1–.3 Private Sector Health Expenditure by Use of Funds, Alberta, 1975 to 2001—Current Dollars
- 2.10.1–.3 Private Sector Health Expenditure by Use of Funds, British Columbia, 1975 to 2001—Current Dollars
- 2.11.1–.3 Private Sector Health Expenditure by Use of Funds, Yukon Territory, 1975 to 2001—Current Dollars
- 2.12.1–.3 Private Sector Health Expenditure by Use of Funds, Northwest Territories, 1975 to 2001—Current Dollars
- 2.13.1–.3 Private Sector Health Expenditure by Use of Funds, Nunavut Territory, 1975 to 2001—Current Dollars
- 3.1.1–.3 Public Sector Health Expenditure by Use of Funds, Newfoundland, 1975 to 2001—Current Dollars
- 3.2.1–.3 Public Sector Health Expenditure by Use of Funds, Prince Edward Island, 1975 to 2001—Current Dollars
- 3.3.1–.3 Public Sector Health Expenditure by Use of Funds, Nova Scotia, 1975 to 2001—Current Dollars
- 3.4.1–.3 Public Sector Health Expenditure by Use of Funds, New Brunswick, 1975 to 2001—Current Dollars
- 3.5.1–.3 Public Sector Health Expenditure by Use of Funds, Quebec, 1975 to 2001— Current Dollars

Series D—Health Expenditure by Use of Funds, by Source of Finance, by Province/Territory (cont'd)

- 3.6.1–.3 Public Sector Health Expenditure by Use of Funds, Ontario, 1975 to 2001—Current Dollars
- 3.7.1–.3 Public Sector Health Expenditure by Use of Funds, Manitoba, 1975 to 2001—Current Dollars
- 3.8.1–.3 Public Sector Health Expenditure by Use of Funds, Saskatchewan, 1975 to 2001—Current Dollars
- 3.9.1–.3 Public Sector Health Expenditure by Use of Funds, Alberta, 1975 to 2001—Current Dollars
- 3.10.1–.3 Public Sector Health Expenditure by Use of Funds, British Columbia, 1975 to 2001—Current Dollars
- 3.11.1–.3 Public Sector Health Expenditure by Use of Funds, Yukon Territory, 1975 to 2001—Current Dollars
- 3.12.1–.3 Public Sector Health Expenditure by Use of Funds, Northwest Territories, 1975 to 2001—Current Dollars
- 3.13.1–.3 Public Sector Health Expenditure by Use of Funds, Nunavut Territory, 1975 to 2001—Current Dollars
- 4.1.1–.3 Provincial Government Health Expenditure by Use of Funds, Newfoundland, 1975 to 2001—Current Dollars
- 4.2.1–.3 Provincial Government Health Expenditure by Use of Funds, Prince Edward Island, 1975 to 2001—Current Dollars
- 4.3.1–.3 Provincial Government Health Expenditure by Use of Funds, Nova Scotia, 1975 to 2001—Current Dollars
- 4.4.1–.3 Provincial Government Health Expenditure by Use of Funds, New Brunswick, 1975 to 2001—Current Dollars
- 4.5.1–.3 Provincial Government Health Expenditure by Use of Funds, Quebec, 1975 to 2001—Current Dollars
- 4.6.1–.3 Provincial Government Health Expenditure by Use of Funds, Ontario, 1975 to 2001—Current Dollars
- 4.7.1–.3 Provincial Government Health Expenditure by Use of Funds, Manitoba, 1975 to 2001—Current Dollars
- 4.8.1–.3 Provincial Government Health Expenditure by Use of Funds, Saskatchewan, 1975 to 2001—Current Dollars

Series D—Health Expenditure by Use of Funds, by Source of Finance, by Province/Territory (cont'd)

- 4.9.1–.3 Provincial Government Health Expenditure by Use of Funds, Alberta, 1975 to 2001—Current Dollars
- 4.10.1–.3 Provincial Government Health Expenditure by Use of Funds, British Columbia, 1975 to 2001—Current Dollars
- 4.11.1–.3 Territorial Government Health Expenditure by Use of Funds, Yukon Territory, 1975 to 2001—Current Dollars
- 4.12.1–.3 Territorial Government Health Expenditure by Use of Funds, Northwest Territories, 1975 to 2001—Current Dollars
- 4.13.1–.3 Territorial Government Health Expenditure by Use of Funds, Nunavut Territory, 1975 to 2001—Current Dollars

Series E—Provincial Government Health Expenditure by Selected Uses of Funds, by Age and Sex, by Province/Territory and Canada

- 1.1–.4 Provincial Government Hospital Expenditure by Age and Sex, by Province/Territory and Canada, 1996 to 1999—Current Dollars
- 2.1–.4 Provincial Government Other Institutions Expenditure by Age and Sex, by Province/Territory and Canada, 1996 to 1999—Current Dollars
- 3.1-.4 Provincial Government Physician Expenditure by Age and Sex, by Province/Territory and Canada, 1996 to 1999—Current Dollars
- 4.1-.4 Provincial Government Other Professionals Expenditure by Age and Sex, by Province/Territory and Canada, 1996 to 1999—Current Dollars
- 5.1-.4 Provincial Government Drug Expenditure by Age and Sex, by Province/Territory and Canada, 1996 to 1999—Current Dollars
- 6.1-.2 Estimate of Total Provincial Government Health Expenditure by Age and Sex, by Province/Territory and Canada, 1998 to 1999—Current Dollars

Acknowledgments

It is only through the contribution of many individuals and organizations that the production of *National Health Expenditure Trends*, 1975–2001, is possible. The Canadian Institute for Health Information (CIHI) expresses its gratitude to:

The National Health Expenditure Expert Advisory Group for their advice and constructive comments related to National Health Expenditures:

- Dr. John Horne, Health Sciences Centre, Winnipeg, Manitoba
- Dr. Richard Plain, University of Alberta
- Dr. Robert G. Evans, University of British Columbia
- M. André Grenon, Health Canada
- Dr. Michael Wolfson, Statistics Canada
- Dr. Jeremiah Hurley, McMaster University
- Dr. Stephen Law, Mount Allison University
- M. Jean Houde, Ministère de la santé et des services sociaux du Québec
- Dr. Anil Gupta, Health Canada
- Mr. Bruce Petrie, Canadian Institute for Health Information

Data Suppliers for their provision of data to the national health expenditure database:

- Health Canada, Statistics Canada and other federal departments reporting health care financial data
- the provincial and territorial governments
- the provincial and territorial Workers' Compensation Boards and la Commission de la santé et de la sécurité du travail du Québec
- A.C. Nielsen Canada
- the insurance industry, whose recent participation has enhanced our understanding of expenditures in the private sector:
 - The Canadian Life and Health Insurance Association Inc.
 - Atlantic Blue Cross Care
 - Croix Bleue du Québec
 - CUMBA
 - Greenshield Canada
 - Liberty Health
 - Manitoba Blue Cross (United Health Services Corporation)
 - Saskatchewan Blue Cross Medical Services Incorporated
 - Saskatchewan Group Medical Services
 - Alberta Blue Cross
 - Pacific Blue Cross
- Association of Canadian Medical Colleges

- Provincial and territorial ministries for providing age and sex distributions for their respective drug subsidy and additional health benefit programs:
 - Newfoundland Medical Services Commission
 - Maritime Medical Care facilitated by the Nova Scotia Department of Health, Insured Programs Management and Clinical Rationalization
 - Atlantic Blue Cross Care facilitated by the New Brunswick Department of Health and Community Services, Medicare/Prescription Drug Program
 - Régie de l'assurance-maladie du Québec facilitated by the Quebec Ministry of Health and Social Services
 - Ontario Ministry of Health and Long-Term Care, Ontario Health Insurance Program and Drug Programs Branch
 - Manitoba Health and Ministry of Family Services, Employment and Income Assistance Division
 - Saskatchewan Health, Saskatchewan Drug Plan and Extended Benefits Branch and Saskatchewan Medical Services Branch
 - Alberta Blue Cross facilitated by Alberta Health and Wellness and Alberta Human Resources and Employment. Alberta Health and Wellness Extended Health Benefits
 - British Columbia Ministry of Health Services, Medical Services Plan and Pharmacare Planning and Special Projects
 - Yukon Department of Health and Social Services
 - Northwest Territories Department of Health and Social Services

External Consultants to CIHI for their technical expertise and assistance:

- Vern Hicks
- Denis Chénard and Eden Cloutier of the Hygeia Group

CIHI is responsible for the National Health Expenditure (NHEX) Database. The dedicated work of its NHEX section, Geoff Ballinger, Ian Button, Terry Campbell, Gilles Fortin, Eva Tsakonas, and Jingbo Zhang is essential to the classification and dissemination of data that describe Canadian health expenditure.

Highlights

- Total health expenditure, in current dollars¹, was estimated at \$89.5 billion in 1999, and is forecast to have reached \$95.9 billion in 2000 and \$102.5 billion in 2001.
- The average annual rate of growth of total health care spending declined from 11.2% between 1975 and 1991, to 2.4% between 1991 and 1996. It increased to 4.9% in 1997, 6.6% in 1998, and 7.2% in 1999 and is expected to have been 7.1% in 2000 and 6.9% in 2001, reflecting projected increases in health care spending by provincial and territorial governments.
- Total health expenditure per capita was estimated at \$2,936 in 1999 and is expected to have been \$3,116 in 2000 and \$3,298 in 2001.
- Total health care spending as a percentage of Gross Domestic Product was 9.2% in 1999; the ratio is forecast to have fallen to 9.1% in 2000 and is expected to have been 9.4% in 2001.
- In 1998, for the first time since 1993, public sector health expenditures grew faster than private sector expenditures. Consequently, the private sector share fell from its peak in 1997 of 29.8% to 29.2% in 1999. It is expected to have decreased to 28.0% in 2000 and 27.4% in 2001.
- The category of drugs ranks second after hospitals in terms of its share of total health expenditure. In 1997, expenditure on drugs overtook spending on physicians services. The share of total spending accounted for by drugs grew from a low of 8.4% in the late 1970s to 14.9% in 1999. In 2001, drugs are expected to remain ranked second with a share of 15.2%.
- Total health expenditure per capita varies among the provinces. In 1999, Manitoba and British Columbia spent more per person on health care than any other province, at \$3,205 and \$3,036, respectively. Quebec, followed by Prince Edward Island, had the lowest expenditure per capita at \$2,710 and 2,712, respectively.
- Health expenditure varies considerably among different age and sex groups. After adjusting for differences in provincial age and sex distributions, Newfoundland, Alberta and British Columbia had the highest per capita provincial government expenditure in 1999, while Prince Edward Island and New Brunswick had the lowest.
- In 1999, people aged 65 and over, who comprised 12.4% of the population, accounted for over 48% of provincial/territorial government hospital expenditure in Canada; children under one year old accounted for 5% of provincial/territorial hospital expenditure and comprised 1% of the population.

-

¹ All figures are in current dollars.

Introduction

Canada's health system is financed by both the public and private sectors. Public sector funding includes payments by governments at the federal, provincial/territorial and municipal levels and by Workers' Compensation Boards and other social security schemes. Private sector funding consists primarily of health expenditures by households and private insurance firms.

The Canadian Institute for Health Information (CIHI) tracks health spending by each source of finance in the National Health Expenditure Database (NHEX). This database contains a historical series of macro level health expenditure statistics by province and territory beginning in 1960. The Canadian Institute for Health Information assumed responsibility for the national health accounts, including the National Health Expenditure database, in 1995.

National Health Expenditure Trends (1975–2001) is CIHI's fifth annual health expenditure trends publication and provides detailed updated information on health expenditure in Canada. Similar in format to previous reports, this publication includes:

- Highlights of national health expenditure;
- An overview that includes health expenditure trends from 1975 to 2001; 1999 figures which are now considered to be an estimate rather than a forecast; an outlook for 2000 and 2001; and
- Updated data tables, which contain estimates to 1999 and forecasts to 2001.

Special features of this year's publication are:

- An update of provincial/territorial government health expenditure by age and sex based on utilization information of major provincial and territorial health programs; and
- Two years of provincial/territorial government health expenditure standardized for differences in the age/sex distribution of provincial populations.

In order to improve the quality of the data in the National Health Expenditure database the historical information appearing in earlier publications has been revised. A detailed explanation of the revisions can be found in the Technical Notes section under Historical Data Revisions.

More information on health expenditures and the methods used in the preparation of this document is available by contacting the NHEX section by telephone, (613) 241-7860 or by email: nhex@cihi.ca.

Overview

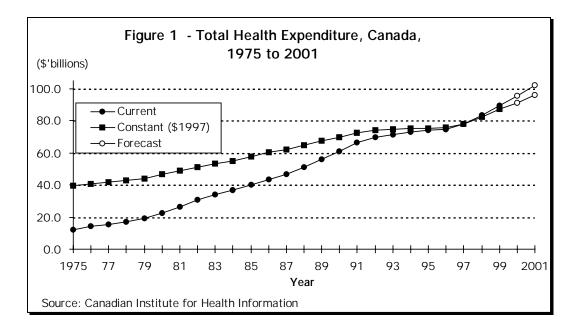

TOTAL HEALTH EXPENDITURE

■ Trends—1975 to 1999

Over the period 1975 to 1991, Canada's total health expenditure grew at an average annual rate of 11.2%. From 1991 to 1996, growth fell substantially to an average annual rate of 2.4%.

In 1997, total health expenditure was \$78.3 billion or 4.9% higher than it was in 1996. Total expenditure grew by 6.6% in 1998 and 7.2% in 1999 reaching \$89.5 billion in the latter year (Figure 1).

In constant (1997) dollars, health expenditure increased by an average annual rate of 3.8% from 1975 to 1991. Between 1991 and 1996, growth fell to just 0.8 percent, and increased to 3.6% in 1997 when total health expenditure reached \$78.3 billion. In 1998, total expenditure grew by 5.1% and in 1999 it grew by another 5.9% reaching \$87.2 billion.

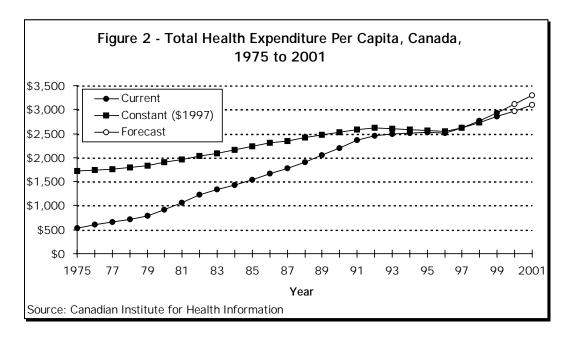

Outlook—2000 and 2001

Expenditures are forecast to have reached \$95.9 billion in 2000 and \$102.5 billion in 2001, an increase of 7.1% in 2000 and 6.9% in 2001. In terms of constant (1997) dollars, expenditures are forecast to have reached \$91.1 billion in 2000 and \$96.0 billion in 2001, an increase of 4.4% in 2000 and 5.4% in 2001.

TOTAL HEALTH EXPENDITURE PER CAPITA

■ Trends—1975 to 1999

The average annual rate of increase in total health expenditure per capita was 9.8% from 1975 to 1991. Growth was lower from 1991 to 1996 with an average annual rate of 1.3%. By 1997, per capita health expenditure was 3.8% higher than the previous year at \$2,612 (Figure 2). In 1998, it grew another 5.7% to reach \$2,761. By 1999, per capita health expenditure was \$2,936, 6.3% or \$175 higher than it was in 1998. In terms of constant (1997) dollars, health expenditure per capita increased by an average annual rate of 2.6% from 1975 to 1991. From 1991 to 1996 expenditure per capita declined by three-tenths of one percent per year on average, and increased by 2.5% in 1997 to \$2,612. Per capita expenditure grew by 4.2% in 1998 to \$2,723, and by 5.1% in 1999 reaching \$2,860.

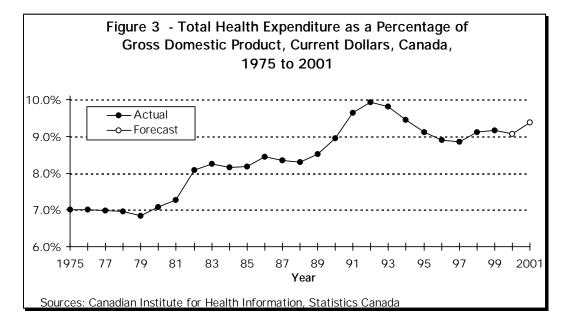

Outlook—2000 and 2001

Per capita expenditure is expected to have increased by 6.1% in 2000 and 5.8% in 2001. Per capita expenditure in 2001 is forecast to have been \$3,298, \$182 higher than in 2000. In constant (1997) dollars per capita, health expenditure is expected to have increased by 3.5% in 2000 and 4.3% in 2001, when per capita expenditure is expected to have been \$3,089 or \$128 higher than in 2000.

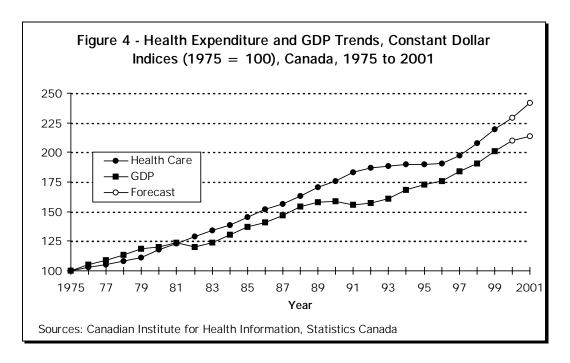

TOTAL HEALTH EXPENDITURE AND ECONOMIC GROWTH

■ Trends—1975 to 1999

Total health expenditure, as a proportion of GDP was 7.0% in 1975. During the late 1970s, total health expenditures increased at rates that were almost identical to the rate of growth in GDP. The two rates of growth diverged during the early 1980s (Figure 3).

Real GDP fell during the 1982 recession, and did not recover to its pre-recession level until 1984 (Figure 4). Health expenditure continued to grow during this time. Consequently, the ratio of total health expenditure to GDP increased sharply, from 6.8% in 1979 to 8.3% in 1983. Real health expenditure grew at slightly higher rates than the economy during two of the last 5 years of the 1980s. By the end of the decade, the total health expenditure to GDP ratio was equivalent to 8.5%.

Canada experienced another recession from 1990 until 1992. Real GDP increased in 1992 but did not recover to pre-recession levels until 1993. Real health expenditures grew at higher rates than real GDP from 1989 to 1992. The ratio of total health expenditure to GDP increased significantly during these four years reaching its peak of 9.9% in 1992. Real health expenditures then grew more slowly than GDP between 1993 and 1997; consequently, the health to GDP ratio fell each year in that period to 8.9% in 1997. Real health expenditure has grown faster than GDP in 1998 and 1999, with the result that the health to GDP ratio ended the 1990s at 9.2%.

Outlook—2000 and 2001

The ratio of total health expenditure to GDP is forecast to have fallen slightly in 2000 to 9.1%. According to forecasts, growth in real health expenditure will surpass growth in real GDP by 3.9 percent in 2001, bringing the health to GDP ratio to 9.4%. The last time there was such a large spread in the two real growth rates was in 1991, during the last recession.

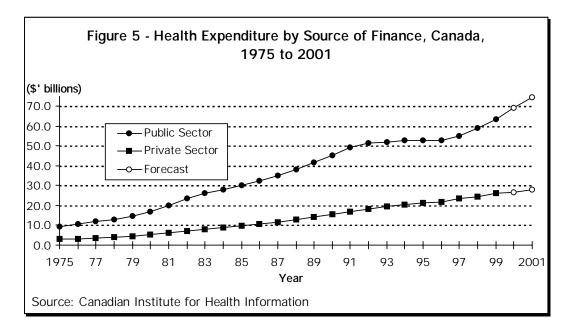

See Data Tables A.1 and B.1.3.

TOTAL HEALTH EXPENDITURE BY SOURCE OF FINANCE

Trends—1975 to 1999

The average annual rate of growth in health expenditure by governments and government agencies in Canada (the public sector) between 1975 and 1991 was 11.0%. There was a pronounced change in public expenditure trends following the 1990–1992 recession (Figure 5). During this period, governments introduced fiscal restraint measures, which affected spending for health and social programs. Average annual rates of growth fell to 0.5% from 1992 to 1996, lower than at any time in the past 20 years. In 1995 and 1996 there was virtually no growth and in 1997 public sector expenditure increased by 4.2%.

By comparison, the average annual rate of growth of health spending by private health insurers and households (the private sector) was 11.6% from 1975 to 1991. From 1992 to 1996, it was 4.9%. Private sector growth rates were considerably higher than the public sector rates during this period and, as a result, the private sector share of total health expenditure increased by 3.8 percentage points during the five years, reaching 29.8% by 1997.

1998 marked the first year in which public sector growth was higher than growth in the private sector since 1983. In 1998, public sector health expenditure grew by 7.4% over the previous year reaching \$59.1 billion. Private sector growth in 1998 was 4.8%, adding \$1.1 billion to private sector expenditure to become \$24.5 billion. In 1999, public sector expenditure grew by another 7.3% to reach \$63.4 billion. The private sector expenditure grew by 7.0%, slightly less than the public sector expenditure to become \$26.2 billion. The higher growth in public sector health care spending relative to the private sector resulted in a fall in the proportion that private sector spending contributes to overall spending. In 1998 the private sector share fell to 29.3% of total health expenditure; in 1999 it fell again to 29.2%.

In terms of constant dollars, private sector expenditure grew more rapidly than public sector expenditure during the last half of the 1970s (Figures 6 and 7). During this time, real growth rates in the private sector averaged 5.1% annually, while public sector expenditure grew at real rates of 2.7% annually. Rates converged in the early 1980s, and from 1984 to 1990, the real annual growth rates were almost identical in the two sectors, averaging 4.1% in the private sector and 4.0% in the public sector.

Public sector expenditure continued to increase during the first two years of the 1990–1992 recession, at annual real rates averaging 2.9%. In 1992, however, the real growth rate of public sector expenditure fell to 1.7%. In 1993, there was a decline in public sector expenditure of seven tenths of one percent with further declines over the next 3 years. In 1997, expenditure increased by 3.0%. In 1998 and 1999 real growth in the public sector increased to 6.2% and 6.5%, respectively, the highest real rates of public sector growth to this point in time in the series.

During the six years after 1991, private expenditure continued to have real growth rates averaging 3.7% per year. The different trends in private and public expenditures after 1991 explain in large part the rapid growth of the private sector share to 1997. By 1998, however, the situation was reversed, real growth in the private sector was just 2.6%; and in 1999, it was 4.6%. These are lower rates of growth than in the public sector, resulting in a decreasing private sector share of total expenditure after 1997.

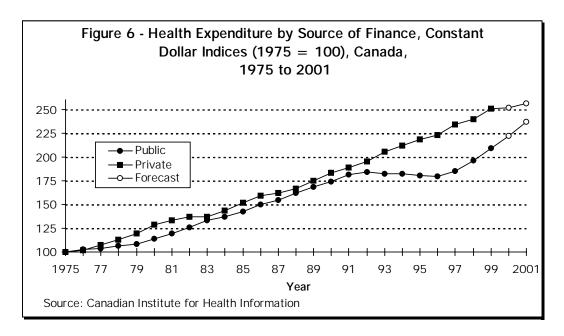

See Data Tables A.2.1, A.2.2, A.2.4, and A.2.5.

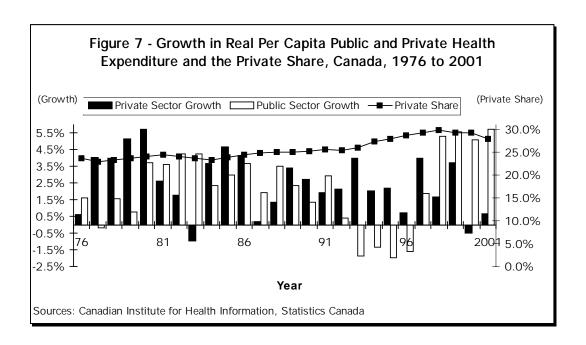

Outlook—2000 and 2001

Public sector expenditure is forecast to have been \$69.0 billion in 2000 and \$74.5 billion in 2001. The growth rates associated with these increases are 8.9% and 7.9%, respectively, reflecting increased spending by governments on health. Private sector expenditure is forecast to have reached \$26.8 billion in 2000 and \$28.0 billion in 2001, assuming growth rates of 2.6% and 4.5%, respectively.

In terms of constant (1997) dollars, public sector expenditure is forecast to have been \$66.0 billion in 2000 and \$70.5 billion in 2001, with respective growth rates of 6.0% and 6.8%. Private sector expenditure is forecast to have reached \$25.1 billion in 2000 and \$25.5 billion in 2001, with growth rates of 0.4% and 1.7%, respectively.

The private sector accounted for 28.0% of total expenditure in 2000, down from 29.2% in 1999. In 2001, the private share is expected to have fallen again to 27.4% of total health spending.

Public Sector Health Expenditure by Source of Finance

Health expenditures by governments and government agencies (the public sector) are financed by three levels of government—provincial and territorial governments; federal government direct health care spending; municipal government and, by Workers' Compensation Boards and other social security schemes. The distribution of public sector expenditure among these four sources of finance is shown in Table 1. Provincial government expenditure was \$8.7 billion in 1975, accounting for 93.6% of public sector expenditure and 71.4% of total expenditure that year. The other public sources together totaled \$0.6 billion, or 6.4% of the public sector and 4.8% of total expenditure in 1975. The provincial/territorial government share of public sector spending was highest in 1983 at 93.9%. Over the next thirteen years, the proportion fell by 1.1 percentage points to reach 92.8% of public spending in 1996. Beginning in 1997, the proportion declined further with the inclusion of the Quebec Drug Insurance Fund in the Social Security Funds sector and higher relative growth in direct health care spending by the federal government. By 1999, provincial/territorial government expenditure was \$58.1 billion, accounting for 91.6% of public sector expenditure, a drop of two percentage points from 1975 and 2.3 percentage points from its high in 1983.

Provincial government expenditure as a proportion of total expenditure has gradually fallen from 71.4% in 1975 to 64.9% in 1999, with the largest falls during the period of cost containment in the provincial/territorial government sector between 1992 to 1996. The minimum proportion of total spending was reached in 1998 at 64.8%. The proportion is expected to have increased in 2000 and 2001 due to higher relative growth in the provincial/territorial government sector, so that provincial/territorial government health care spending is expected to have accounted for 65.8% of total spending in 2000 and 66.4% in 2001.

Table 1—Distribution of Public Sector Health Expenditure by Source of Finance, Canada, 1975 and 1999

	1975		1999		
	(\$' 000,000)	(%)	(\$' 000,000)	(%)	
Provincial/Territorial Governments	8,710.4	93.6	58,079.5	91.6	
Federal Direct	398.3	4.3	3,361.8	5.3	
Social Security Funds	121.1	1.3	1,098.9	1.7	
Municipal Governments	71.6	0.8	832.1	1.3	
Total Expense	9,301.4	100.0	63,372.2	100.0

Federal Transfers

National health expenditures are reported based on the principle of *responsibility for payment* rather than on the source of the funds. It is for this reason that federal health transfers to the provinces are included in the provincial government sector. Federal health transfers are a combination of cash and tax point transfers in support of health care to each province and territory. Applying the 1975/1976 base year program costs to the EPF component of federal health transfers² and including both cash and the value of the tax points, total federal health transfers in 1975 amounted to \$3.39 billion or just under 39% of provincial and territorial government health expenditure. By 1995, federal health transfers amounting to \$16.1 billion had declined to 33% of provincial/territorial government health expenditure. As transfer-funding formulas were changed and inflation moderated, the growth in total health transfers fell from double-digit rates in the 1970s and early 1980s to less than 2% by 1995.

In April 1996 the Canada Health and Social Transfer (CHST) was introduced. The CHST is a block fund to the provinces in support of health care, post secondary education, social assistance and other social programs. Provinces can allocate the CHST to health and other social programs according to their specific priorities. Nevertheless, the 1999 federal government budget allocated an additional \$11.5 billion dollars in cash transfers to the provinces on an equal per capita basis over 5 years. The federal government designated this money specifically for health care. Most of the funds (\$8.0 billion) were to be in the form of future-year increases in the CHST, with a \$3.5 billion supplement available to the provinces and territories beginning in 1999.

An additional \$2.5 billion over 4 years beginning in 2000/2001 was allocated to the CHST in the February 2000 federal budget to fund both post-secondary education and health. The health accord signed by the federal and provincial governments on September 11, 2000 further supplemented the CHST adding gradual annual increases that will take the cash component of the CHST from \$15.5 billion in 2000/2001 to \$21 billion by 2005/2006.

The September 2000 health accord added an additional \$2.3 billion in transfers by the federal government to be paid out over five years that was outside of the CHST mechanism. Specifically, \$500 million was allocated in 2000/2001 for health information technology. Another \$1.0 billion was allocated over two years beginning in 2000/2001 to the Medical Equipment Fund which is intended to help in the purchase of major medical equipment such as magnetic resonance imaging units. A further \$800 million was allocated over 4 years beginning in 2001/2002 to the Health Transition Fund for Primary Care which is intended to ease pressures in emergency rooms and reduce waiting times. In addition, the 1999 federal budget allocated nearly \$1.4 billion over four years for investment in health information, research and prevention.

The increases in federal transfers will be reflected primarily in increased expenditures by the provincial and territorial governments during the next several years.

-

The components of federal health transfers prior to the introduction of the CHST in April 1996 include Established Program Financing (EPF), the health portion of the Canada Assistance Plan (CAP), the Health Resources Fund, and transfers by the Department of Indian and Northern Development to Indians and the Inuit for hospital and medical care.

Direct Federal Health Expenditure

In 1999, nearly 30 federal government departments and agencies provided direct health care services to Canadians worth \$3.4 billion accounting for 3.8% of total expenditure on health. The three major contributors of federal direct health expenditures were Health Canada, which funded 56%, the Department of Veterans Affairs (16%) and the Medical Research Council (9%).

Social Security Funds

Workers' Compensation Boards which were shown as a separate category in reports prior to the 2000 report are now included under Social Security Funds together with the Quebec Drug Insurance Fund. Both Workers' Compensation Boards and the Quebec Drug Insurance Fund meet the conditions of Social Security Funds. Social Security Funds are financially autonomous social insurance schemes that are imposed and controlled by a government authority. They generally involve compulsory contributions by employees, employers or both, and the government authority determines the terms on which benefits are paid to recipients.

Workers Compensation Boards operate under provincial and territorial statute and are considered agencies of the provincial/territorial governments. They involve compulsory contributions by employers who pay a percentage of their total payroll depending on the accident experience of each category of employer.

On January 1, 1997 the Quebec Ministry of Health and Social Services, through the Régie de l'assurance-maladie du Québec (RAMQ) introduced a universal drug program that covered residents of the province who were not otherwise covered by the provincial program or by private health insurance generally offered through employment. Drug claims for these participants are paid from the Drug Insurance Fund. This fund is self-financed through the compulsory payment of premiums generally by the self-employed and employees of organizations that do not offer private drug insurance as a benefit of employment.

This component of the Quebec drug program is considered to be a social security scheme, while the remaining portion of the program that is paid through the Quebec Ministry of Health and Social Services is included as a provincial government expenditure.

In 1997, 1998 and 1999, the Quebec Drug Insurance Fund spent \$172 million, \$218.2 million and 264.0 million, respectively, on claims. Preliminary data indicate that \$413.8 million was spent in 2000, and CIHI estimates that claims from this fund will have been approximately \$528.7 million in 2001.

Private Sector Health Expenditure by Source of Finance

Private sector expenditure in the National Health Accounts has three distinct components: household out-of-pocket expenditure, insurance expenditure and non-consumption expenditure.³ The distribution of private expenditure between these three sources of finance is shown in Table 2. Out-of-pocket expenditure was estimated at \$14.2 billion in 1999, an increase of \$6.8 billion over the last eleven years. In 1988, the first year for which data at this level of detail was available, out-of-pocket expenditure accounted for 58.1% of private sector expenditure. By 1999, the proportion dropped to 54.3% as expenditure by insurance firms grew more rapidly. The share of non-consumption expenditure dropped from 12.7% to 8.1% during the same period (Table 2).

Table 2—Distribution of Private Sector Health Expenditure by Source of Finance, Canada, 1988⁴ and 1999

Source of Finance	1988		1999	
Source of Finance	(\$' 000,000)	(%)	(\$' 000,000)	(%)
Household				
(out-of-pocket)	7,435.3	58.1	14,224.4	54.3
Private Health Insurance	3,734.2	29.2	9,825.7	37.5
Non-Consumption	1,625.9	12.7	2,124.3	8.1
Total Expense	12,795.4	100.0	26,174.4	100.0

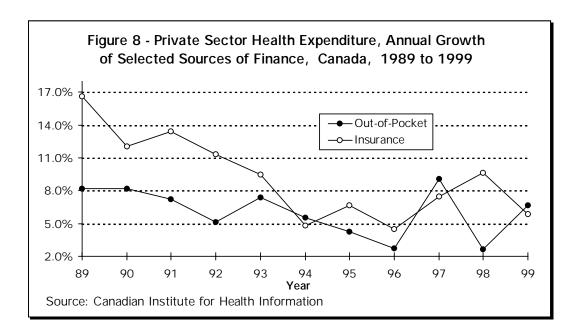

Source: Canadian Institute for Health Information

Insurance firms increased their share of private sector expenditure by over eight percentage points during the eleven-year interval (1988–1999) and in 1999 were responsible for nearly forty percent of private sector health expenditure. Insurance expenditure grew more rapidly than out-of-pocket expenditure during most of the 1980s and early 1990s, but rates of growth converged in the mid-1990s. By 1999, growth in health expenditure from households and health insurance firms were similar at 6.7% and 5.9%, respectively (Figure 8). This represents a fall in growth from the previous year in health insurance expenditure and an increase in growth of household expenditure.

-

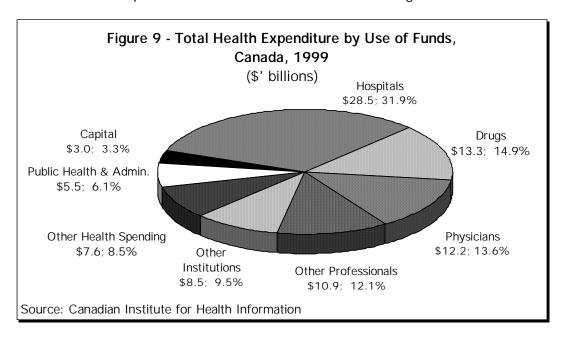

³ Non-consumption expenditure includes a number of heterogeneous components, such as hospital non-patient revenue, capital expenditures for privately owned facilities and health research.

⁴ Private sector data were revised following a methodology review in the early 1990s. The revised private sector data incorporated information estimated directly from insurance, out-of-pocket and non-consumption sources for 1988 and subsequent years. See the Definition of the Private Sector near the end of the publication, for further details.

TOTAL HEALTH EXPENDITURE BY USE OF FUNDS

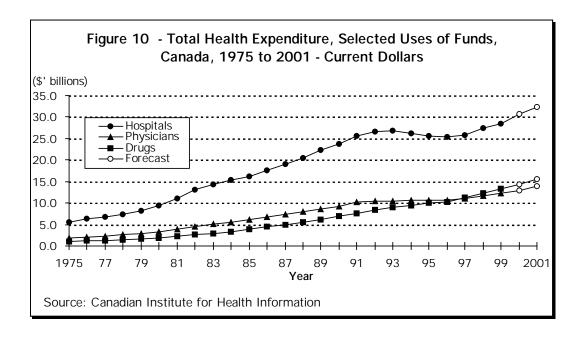

Health dollars are used to purchase health care goods and services, to provide capital investment, to administer public and private insurance plans and public health programs, and to fund research. These uses are grouped into eight major categories (uses of funds) throughout most of the National Health Expenditure data series (Figure 9). Data table series A.3.1 to A.3.3 report national estimates for thirteen categories.

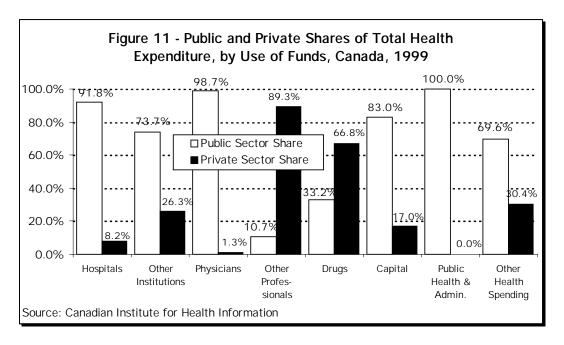

This section discusses the public and private shares of total health expenditure and the shares of the major categories between the public and private sectors and refers to Figures 9 to 16.

Figure 10 shows national expenditures for the three major uses of funds from 1975 to 2001 in billions of current dollars. Figure 11 presents the public and private shares at the national level of the eight major uses of funds in 1999.

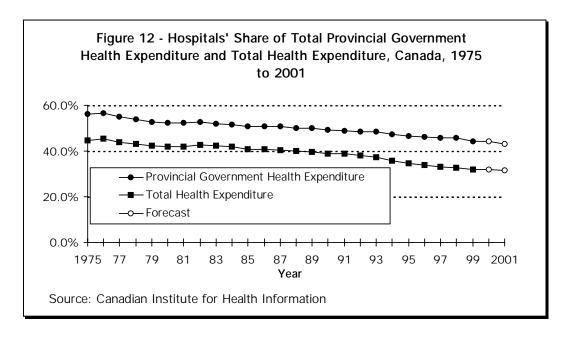

See Data Tables A.3.1 to A.3.3 and C.1.1. to C.4.4.

Hospitals

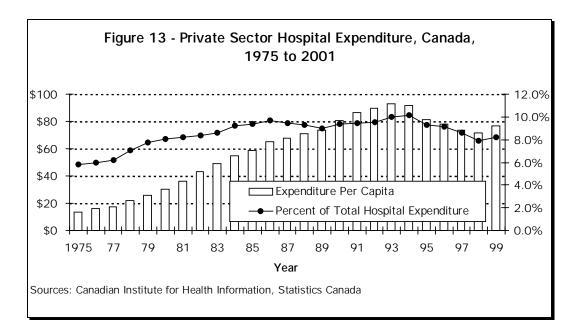

Hospitals have traditionally occupied a prominent place in health care provision. In the mid-1970s hospitals accounted for approximately 45% of total health expenditure and for 56% of provincial government health expenditure. During the past 25 years, the share of hospitals in total health expenditure has fallen. Between 1976 and 1990, hospitals' share of total expenditure fell by 6.2 percentage points, while their share of provincial expenditure dropped 7.3 percentage points. During the 1990s hospitals' share of total and provincial expenditure declined by 7.1 percentage points and 4.9 percentage points respectively (Figure 12). At the end of the decade, Canadians spent \$28.5 billion on hospitals, accounting for 31.9% of total expenditure.

Provincial and territorial governments' expenditure accounts for 90% of hospital income. The private sector is the next largest source of income, followed by other public sectors. Private sector expenditure per capita decreased in most years following 1993. Private expenditure per capita in 1999 was \$76.88, 17.4% below the high of \$93.02 in 1993. This decrease in hospital revenue from the private sector was due in large measure to reductions in the number of hospitals and beds, and the associated decline in revenue for preferred accommodation and auxiliary services. Private sector revenue fell more rapidly than overall hospital expenditure, with the result that by 1999 the private sector accounted for only 8.2% of total hospital expenditure, down from a high of 10.1% in 1994 (Figure 13).

Table 3—Hospital Expenditure Summary by Sector of Finance, Canada, 1999

	Provincial	Other Public	Private	Total
Total Expenditure (000,000)	\$25,772.6	\$432.4	\$2,344.6	\$28,549.6
Expenditure Per Capita	\$845.02	\$14.18	\$76.88	\$936.08
Share of Total	90.3%	1.5%	8.2%	100.0%

Of the \$2.3 billion spent on hospital services by the private sector in 1999, households and insurance firms together spent nearly \$1.2 billion providing income to hospitals for patient services⁵. Non-patient revenue earned from investments, food services, real estate, parking, rentals, donations and other sources provided the remainder of the private sector. Hospital expenditures financed from these sources totaled almost \$1.2 billion in 1999. This is up slightly from the previous year following four straight years of declines from a high of \$1.7 billion in 1994. The distribution of expenditure financed by insurance, households (out-of-pocket expenditure) and Non-Consumption in 1999 is shown in Table 4.

In 2000, it is expected that the private share of total hospital expenditure will have fallen further to 7.7%, reflecting higher relative growth primarily in the provincial government sector, where hospital expenditure is expected to have grown by 8.1% reaching \$27.9 billion. In 2001, hospital expenditure in the provincial government sector is expected to have grown by an additional 5.7% to reach \$29.4 billion thereby increasing the provincial share of total hospital expenditure to over 91%. Overall, the share that hospitals will take of total expenditure will fall from 31.9% in 1999 to 31.5% in 2001.

-

⁵ Income to hospitals for patient services includes charges for preferred accommodation, care of non-residents, chronic care co-payments, uninsured services and other patient services.

Table 4—Private Sector Health Expenditure, by Source of Finance and Use of Funds, Canada, 1999

■ Drugs

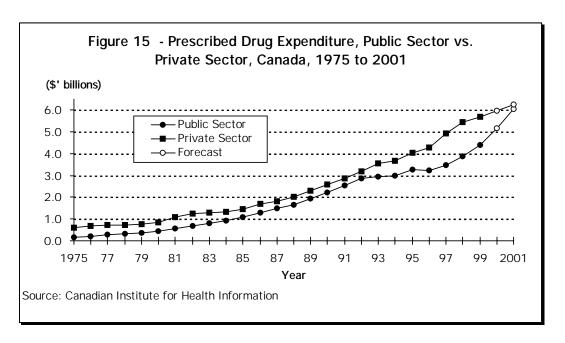

Retail sales⁶ of prescribed and non-prescribed drugs together constituted the second largest category of health expenditure in 1999 at \$13.3 billion, an increase of 7.7% over 1998. Expenditure for drugs has increased more rapidly than total expenditure, with the result that the share of total health expenditure allocated to drugs increased from (a low of) 8.4% in the late 1970s to 14.9% in 1999 (Figure 9). Spending on drugs is forecast to have increased by another 7.4% in 2000 to \$14.3 billion and by 8.6% in 2001 to \$15.5 billion, or 15.2% of total health care spending.

Non-prescribed drugs, which include over-the-counter drugs and personal health supplies, amounted to 24.1% of total expenditure on drugs in 1999 (Figure 14).

⁶ The drug category does not include drugs dispensed in hospitals and generally in other institutions. These are included in the categories of hospitals and other institutions.

In 1976, the private sector accounted for over 75% of expenditure for prescribed drugs; by 1992, it had decreased to 52.8%. The share of prescribed drugs financed from private sources has increased steadily from 1992 to 1998 reaching 58.5%. In 1999, the share fell to 56.3%, or \$5.7 billion. Forecasts indicate that in 2000 and 2001 prescribed drugs expenditure in the private sector will be \$6.0 billion and \$6.2 billion, respectively. In 2000 the private share of prescribed drugs is expected to have fallen to 53.7% and in 2001 is expected to have fallen further to 50.8% of total spending, reflecting higher relative growth in public sector drug programs during these two years (Figure 15).

Physicians

Physicians services constituted the third largest category of total health expenditure in 1999 at \$12.2 billion, representing 13.6% of total health expenditure. Expenditure for physicians services grew at above average rates through the mid-1980s, and peaked at 15.7% of total expenditure in 1987. Expenditure grew at below average rates during the 1990s, leading to a decline in the share of total expenditure. Physician expenditure is forecast to have reached \$12.9 billion in 2000, a 6.0% increase over the previous year, but slightly lower growth than in other major categories. Consequently, the share of total health spending accounted for by physicians services is forecast to have declined to 13.5% of total spending in 2000. In 2001, this category is forecast to have grown by 7.2% to \$13.8 billion, with no change in the share of total expenditure from the previous year.

Just under 99% of total physicians services were financed from public sector sources in 1999. Public sector expenditure on physicians has remained above 98% of total physician expenditure since 1975. The private share of physician expenditure was highest in the decade from 1976 to 1986, when a number of provinces permitted supplementary charges to patients (sometimes referred to as 'extra billing' or 'balance billing'). The private share reached a low of 0.9% in 1991; by 1999 the private share of physician services had reached its highest level since 1986, at 1.3%.

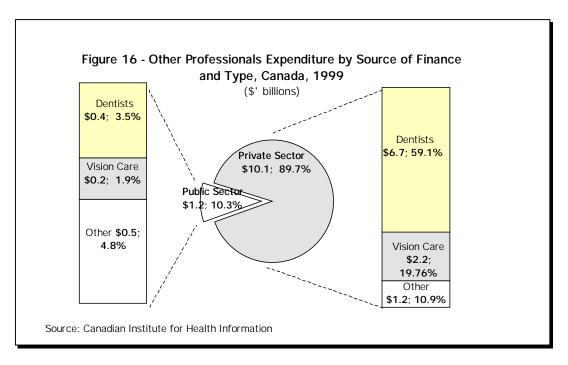

Physicians services was the second largest category of public sector health expenditure in 1999 at 19.0%. It has maintained a relatively stable share of public sector expenditures since 1975.

Households account for almost all private spending for physicians services. Insurance of supplementary charges to patients for medically necessary services was discouraged prior to the Canada Health Act, and such charges are not permitted under the Act. Physician charges for uninsured services and administrative fees have not been insured as explicit benefits of most insurance plans, but they may be insured under broad coverage terms that include care not covered by public plans.

Other Professionals

The broad category of other professionals includes primarily care provided by dentists and denturists, optometrists and opticians, chiropractors, physiotherapists and, private duty nurses. The category of other professionals accounted for \$10.9 billion or 12.1% of total expenditures in 1999 and has maintained the highest percentage of private spending of all the major categories. The private share declined until 1981 reaching a low of 81.7%, and gradually increased to almost 90% in 1999. The private sector growth rates of this category have been more consistent than in other categories, averaging 11.2% through the 1980s and 6.6% from 1990 to 1997. The highest annual growth rates were from 1975 to the early 1980s, a period when the private sector share declined by over five percentage points. Over 60% of expenditure for other professionals is for dental care.

In 2001, the category of other professionals is expected to have increased to \$11.9 billion, with a rate of growth of 5.1%.

Dental care and vision care, are the major discrete categories of expenditure in both the public and private sector for other professional services (Figure 16). In the private sector, insurance firms accounted for 55.0% of the amount spent for dental care in 1999. In the case of vision care in the private sector, households accounted for 80% of spending. Households also accounted for the majority of amounts spent for professionals providing services other than dental or vision care e.g. physiotherapists, chiropractors, podiatrists, massage therapists and private duty nurses. Estimates are not reported separately for these professions by private sector data sources.

Other Institutions

In 1999 the category of other institutions, which includes nursing homes and residential care facilities, accounted for 9.5% of total expenditures, or \$8.5 billion. Other institutions' share of total health expenditure is forecast to have been 9.4% in 2000 and 9.2% in 2001.

Public expenditure is the main source of finance for other institutions. In many provinces public responsibility is split between provincial and municipal governments and/or regional authorities; funding is often provided both by health and social services departments. The public share of other institutions in 1999 was 73.7%. The public sector share has varied over the last twenty years, fluctuating between 71% and 75% between 1975 and 1993, reaching the highest level in the early 1980s. In 1994, the public sector share fell below 70% for the first time in the series. Private expenditure for other institutions grew more rapidly than public expenditure from 1993 to 1998, with its share being 26.3% in 1999.

Other Health Spending

Other health spending in past health expenditure reports was a broad category that included several heterogeneous sub-categories including public health and administration. Beginning in this year's report, public health and administration has been removed from other health spending and is reported as a separate category. The sub-categories with the greatest impact on the current category of other health spending are prepayment administration (the administrative expenses of providing health insurance) and health research⁷. The remaining categories include medical transportation, hearing aids and appliances, occupational health and voluntary health associations and explicitly identified home care.⁸ In 1999, other expenditures accounted for \$7.6 billion or 8.5% of total health expenditure.

Public sector sources accounted for 69.6% of other expenditures in 1999, most of which was home care and ambulance services.

The broad category of other expenditures has grown faster than total health expenditure every year since 1982, except in 1987, 1996 and 1998. In 1999, it is estimated to have grown at 11.8% which is 4.6% higher than the growth of total health expenditure. In 2000 and 2001 it is expected that other health spending will have grown by 5.5% and 6.8%, respectively, reaching \$8.6 billion by 2001.

Public Health and Administration

This is a new category in the 1975 to 2001 health expenditure report. In past health expenditure publications public health and administration was the largest component of the former category of other health spending. Public health and administration includes prevention and promotion activities and infrastructure costs to operate health departments. Public health and administration expenditure is reported in the public sector only.

In 1975, public health and administration accounted for 4.2% of total expenditure and 5.5% of public sector expenditure. Growth in this category has generally been higher than in other categories throughout the series. During the period when governments practiced policies of retrenchment in health care spending, particularly between 1992 to 1996, growth in public health and administration was at least double the growth in total health expenditure. This relative difference resulted in this category's share of total expenditure increasing to 6.1% in 1999, or \$5.5 billion. The share is expected to have increased to 6.5% in 2001 reflecting growth of 9.7% in 2000 and 10.4% in 2001. Public health and administration growth in both these years is expected to have been higher than the growth of total expenditure by at least 2.5% each year.

⁷ Research funded by pharmaceutical companies is funded from drug sales and included in the drugs category.

⁸ Certain services that are identified by data sources as home care are included under the broad category of "other—other Health Spending". Private nursing care in the home, however, would be included in the "other—other professionals" category. Home care programs provided by hospitals are included in the hospitals category. Support services such as domestic maintenance and delivery of meals are considered to be social services within the current definition of home care and are removed where identified.

PROVINCIAL AND TERRITORIAL GOVERNMENT HEALTH EXPENDITURE BY AGE AND SEX⁹

The population of Canada is aging rapidly by historical standards. The largest concentration of population is in the middle age groups and moving upward. ¹⁰ The 'baby-boomers', who are defined as those between 36 and 55 in 2001, represented 32% of the population in 1999. Population projections indicate that the cohort of persons between 35 and 55 will peak at 31.6% of the population in 2001 and then gradually decline over the next twenty-five years to approximately 27% in 2026. ¹¹ The baby-boom cohort will affect the size of the elderly population, which was estimated at 12.4% in 1999, and is projected to grow to just over 20% by 2025 (using the traditional threshold of 65 years to define elderly persons). Future health care costs for an aging population has been a topical issue for a number of years.

The conventional wisdom holds that future demands for health care by an aging population will strain governments' ability to fund services covered under the Canada Health Act. Canadian studies suggest that the effects of population growth and aging will be manageable, however, within the context of a growing economy. Recent research into the effects of population aging on all government expenditures concluded that government expenditures, in total, can be expected to increase by approximately the same percentage as population growth and by less than the growth in GDP.¹²

This section briefly looks at provincial and territorial government expenditures by age and sex. CIHI has collected actual utilization data from national and provincial/territorial administrative databases for major categories of service delivered by provincial and territorial governments, from 1996 to 1999. A brief discussion is provided focusing on the age and sex distributions in 1999 (for 19 age groupings), of the hospital and physician categories. In addition, the analysis also examines provincial government health expenditure by age and sex and standardizes expenditures for differences in provincial populations.

The complete set of estimates for five major categories including hospitals, physicians, drugs, other institutions and other professionals, by 8 age groupings from 1996 to 1999 are presented in the Series E Data Tables of this report.

⁹ A detailed explanation of methods and sources used to distribute provincial government health expenditure by age and sex is available in the Technical Notes section of this report.

Hospital and Physician Expenditure

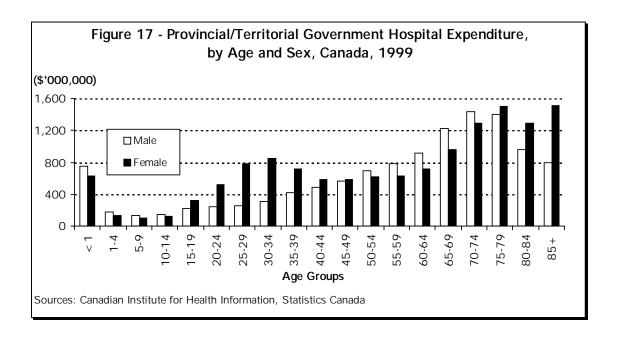

All residents are insured for hospital and physician plans under provisions of the Canada Health Act. Provincial and territorial governments account for 90% of total expenditure for hospitals and 97% for physicians services. These two categories accounted for approximately two-thirds of provincial and territorial health expenditure in 1999.

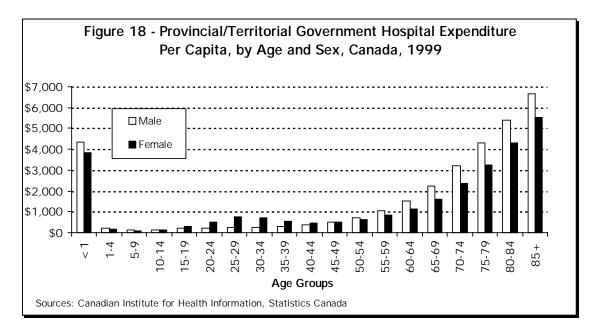

Hospital expenditure for children under one year of age was approximately \$1.38 billion in 1999, more than total expenditure for all children and teenagers from ages 1 to 19 (\$1.33 billion) (Figure 17). Hospital expenditure begins to increase steeply for females in the 15–19 age group, and continues to increase until it peaks in the 30–34 age group. Expenditure declines during the late 30s and early 40s, and then remains stable until the 60s. Expenditure for males increases slightly in the last five years of the teens, and then stays relatively stable until the 30s. Male expenditure is greater than female expenditure in the 50–54 age group, and male expenditure exceeds female expenditure in each five-year age group until age 75. Expenditure for males declines sharply after age 79, with expenditure for females higher than expenditure for males in each age group.

Persons 65 and over accounted for over 48% of provincial government hospital expenditure in Canada during 1999. Within this age group most was spent by 70 to 84 years old (31% of total). Children under one year old accounted for 5%.

Hospital expenditure per capita exhibits a more striking age pattern than total expenditure. Expenditure per capita exceeds \$3,000 for both male and female infants under one year of age, a level not reached again until the 75–79 age group (Figure 18). Expenditure per capita drops to the range of \$100 to \$200 during the childhood and early teenage years. The temporary increase in the female expenditure curve during the 20s and 30s is also noticeable in per capita expenditure, peaking in the age groups from 25 to 35.

Expenditure per capita for both sexes remains under \$1,000 until the 55–59 age group, when it begins to increase rapidly. Hospital expenditure per capita is higher for males than for females throughout the senior age groups. Higher total expenditure for females after age 75 results from higher female populations over 75, which in turn is due to greater longevity.

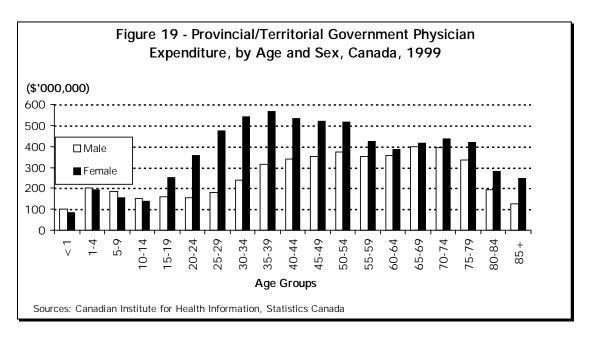

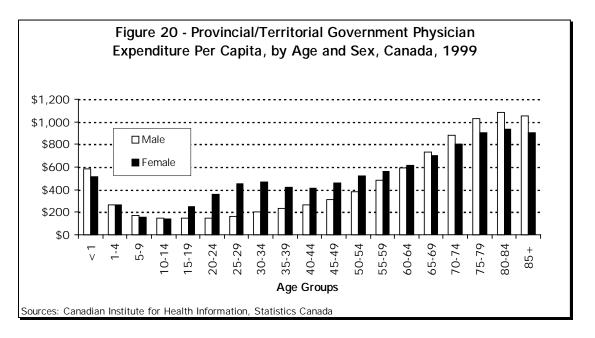

Physicians services expenditure for females is slightly less than for males until age 14, and consistently higher until age 50 (Figure 19). Expenditure for females is highest between the ages of 25 to 54, with those thirty years accounting for 45% of total expenditure for females. Expenditure for males for the same thirty years, ages 25 to 54, accounts for 37% of total expenditure for males.

Expenditure per capita for physicians services follows a different age group distribution than that observed for hospital services (Figure 20). Children under one exhibit relatively high expenditure per capita, but the magnitude of differences between expenditure per capita for infants and other children is much less in the case of physicians services than it is in the case of hospitals (expenditure per capita for physicians services is approximately 3.3 times as great for infants as it is for the 5–9 age group, while it is over 35 times as great for hospital services).

Expenditure per capita for females has a bimodal distribution, peaking at ages 25 to 34 and again at ages 75 to 89, then falling off in the oldest age group. Expenditure per capita for males has a fairly narrow range of \$147 to \$201 between the ages of 5 and 30, and then increases steadily through the middle and elderly age groups, peaking at over \$1,000 during the 80s, then falling off in the oldest age group. Expenditure per capita for males is consistently below the level for females in the same age group from age 15 to 64 and consistently higher thereafter. As in the case of hospital services, a larger population of women aged 70 and older is the main factor contributing to higher total expenditure for physicians' services by female seniors compared to males.

■ Total Provincial/Territorial Government Expenditure¹³

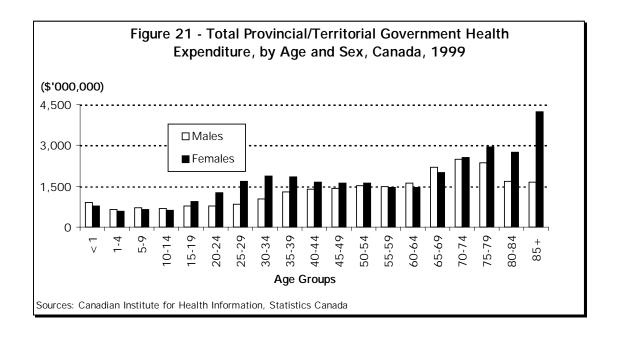

The distribution of provincial/territorial government health expenditure by age and sex, in millions of dollars and per capita dollars is shown in Figures 21 and 22. The influence of hospital and physician expenditure is obvious in the shape of the curves.

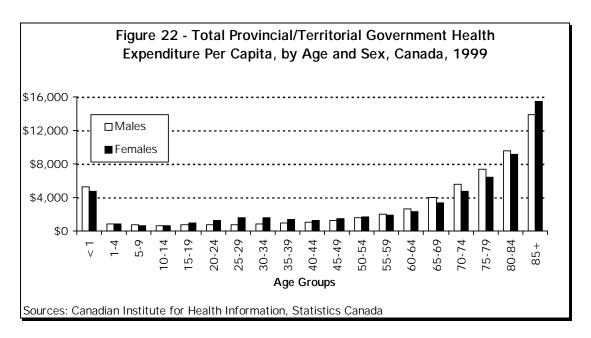

Seniors, ages 65 and older, consumed approximately 43% of all provincial government health spending in 1999, while only comprising 12.4% of the population. Females accounted for an estimated 56% of all provincial government spending in 1999, with female seniors consuming the most at 25%. Senior males accounted for approximately 18% of total expenditure. Infants accounted for less than 3% of total provincial government expenditure.

As in the case for hospital and physician services, there is high spending per capita for infant care, with costs estimated to be greater than \$4,500 per person for both genders. From youths, age 1, to adults, age 59, spending per person slowly increases but does not exceed \$2,034 per person. There is a pronounced increase in per capita spending in the senior age groups. Spending per capita for females exceeds that of males from ages 15 to 54 and again at ages greater than 84.

-

¹³ Missing data was estimated for this analysis. Refer to Technical Notes Section in this report for more details.

PROVINCIAL AND TERRITORIAL GOVERNMENT HEALTH EXPENDITURE STANDARDIZED FOR AGE AND SEX

Provincial and territorial health expenditures per capita are quite similar because of universal coverage for medically necessary hospital and physicians services under the Canada Health Act. The 13 jurisdictions have different population age and sex profiles, however, which could lead to systematic differences in total expenditure, even if per capita expenditure were virtually the same for each age and sex group. Standardizing expenditure to a common population distribution provides a means to measure differences that result from utilization and prices.

Total provincial expenditure per capita, standardized for age and sex for 1998 and 1999, is compared in Table 5. Distributions that were unavailable for specific categories of expenditure were estimated for these comparisons. The data show both actual and standardized expenditures. Standardized expenditures were calculated by multiplying the male and female population of Canada in each of 19 age groups by the expenditure per capita for each age group in each province and territory, and dividing the product so obtained by the population of Canada.

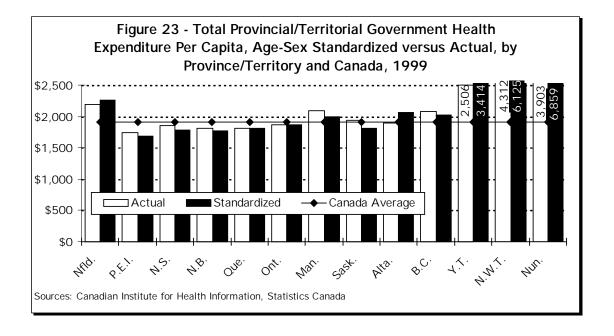

Percentage differences between actual and standardized expenditure tend to be most pronounced in Manitoba, Saskatchewan, Alberta and the territories. Newfoundland, Alberta and the territories have lower than average percentages of their populations over 65, which accounts for their increases in per capita expenditure when standardized to the national population. Quebec and Ontario show little difference between actual and standardized expenditure, due to their large shares of the total population. Other provinces show lower expenditure per capita when data are standardized, with the declines ranging from approximately two to six percent. Saskatchewan standardized expenditure per capita is over six percent less than actual expenditure per capita for both 1998 and 1999.

The territories have the highest standardized expenditure per capita; Newfoundland, Alberta and British Columbia have the highest standardized expenditure among the provinces. In 1999, Alberta per capita spending increases from fifth highest actual spending to second highest behind Newfoundland in age-sex standardized comparisons, above the national average (Figure 23).

HEALTH EXPENDITURE IN THE PROVINCES AND TERRITORIES

Health expenditure per capita varies among provinces because of different age distributions.¹⁴ Population density and geography also affect health expenditure, particularly in the case of the territories. Other factors that affect health expenditure include population health needs and the manner in which health care is delivered (including the balance between institutional and ambulatory care). The manner in which health care is financed is also an important consideration, including the degree of public coverage and private insurance for services not included in the Canada Health Act and the level of remuneration of health personnel.

Health expenditure per capita is highest in the territories, largely because of their large geographical areas and low population densities (Table 6). In 1999, expenditure per capita is quite evenly distributed among the provinces, with Manitoba, British Columbia and Ontario ranking highest with expenditures of between \$3,000 and \$3,205 per person. Nova Scotia, Alberta and Saskatchewan occupy fourth to sixth positions with expenditures within a \$19 range, between 2,907 and 2,926 per capita.

Health expenditure as a percent of GDP shows greater variation than expenditure per capita, ranging from a low of 7.4% in Alberta to highs of 15.6% and 12.7% in Nunavut and Newfoundland, respectively.

In 1999, the public sector was responsible for 70.8% of Canadian health expenditure. The public sector share, with a median (mid-point) of 73.4%, varied considerably among the provinces and territories. It exceeded 84% in the Territories, and was the lowest in Ontario (67.1%).

Public sector expenditure per capita averaged \$2,078 in 1999. After the territories, Manitoba, Newfoundland, and Saskatchewan had the highest public sector expenditure; Prince Edward Island, New Brunswick and Quebec had the lowest.

Private sector expenditure averaged \$858 per capita. Ontario led the thirteen jurisdictions, followed by Nova Scotia and Prince Edward Island.

The 1990s witnessed a leveling of health expenditures, with declines or low growth in expenditure per capita between 1992 and 1996. Expenditure per capita began to show noticeable growth in most provinces beginning in 1998 or 1999 with double-digit growth in some jurisdictions. Variations of this trend are expected to have continued in 2000 and 2001.

_

¹⁴ Provincial comparisons in this discussion are based on figures that are not adjusted for variations in age and sex. For age sex standardized comparisons see the discussion in the previous section.

Source: Canadian Institute for Health Information

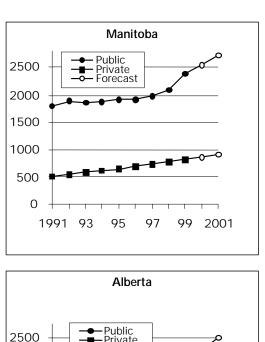

Public sector expenditure per capita declined in all twelve jurisdictions at some time during the 1990s, although the timing and duration of expenditure reductions varied. Quebec, Saskatchewan and Alberta experienced the sharpest declines, while the decline in Ontario was the most protracted with declines in each of the four years from 1993 to 1996 (Figure 24). All jurisdictions recovered from their declines during the latter half of the decade. British Columbia experienced the most stability in public sector expenditure per capita during the five years from 1993 to 1997, and stayed at or near the top of provincial rankings during that time. Current forecasts indicate that Manitoba, British Columbia and Saskatchewan will have the highest levels of public expenditure per capita among the provinces in 2001, while Prince Edward Island, Quebec and Nova Scotia are expected to have the lowest.

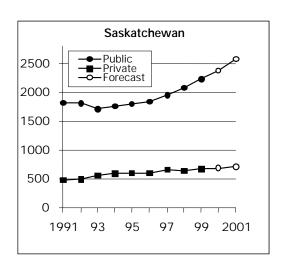

Figure 24—Public and Private Sector Health Expenditure per Capita, 1991 to 2001, by Province and Territory—Current Dollars

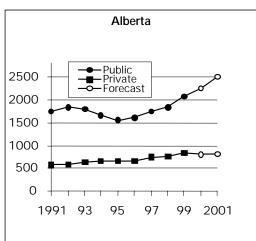

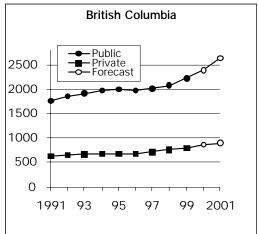

Sources: Canadian Institute for Health Information, Statistics Canada

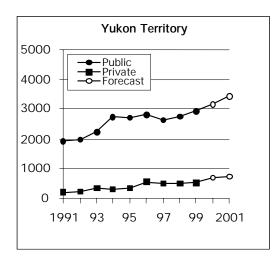

Figure 24 (cont'd)—Public and Private Sector Health Expenditure per Capita, 1990 to 2001, by Province and Territory—Current Dollars

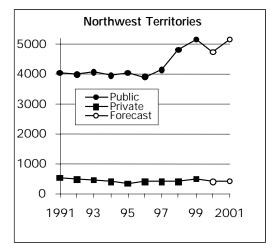

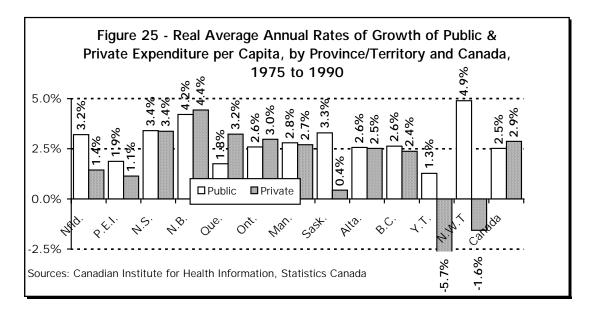

Sources: Canadian Institute for Health Information, Statistics Canada

The provincial trends in Figure 24, which are not adjusted for inflation, show modest private sector growth in most provinces. Ontario private sector expenditure showed the steepest growth curve in the 1990s. By 2001, Ontario is expected to have the highest private sector expenditure per capita at \$1,072. Newfoundland, Nova Scotia, New Brunswick, Quebec, Saskatchewan and the territories experienced reductions in private sector expenditure during brief periods of the 1990s. In Quebec the decline was only one year in duration but the Northwest Territories showed a slight downward trend from 1992 to 1997.

Provinces and Territories

Provincial rates of increase are compared in Figures 25 and 26. The comparisons focus on growth of health expenditure per capita at constant prices. This is to standardize for both population growth and inflation, which have varied by province during the last two decades. The graphs compare annual growth rates in the public and private sectors during the fifteen years from 1975 to 1990 (Figure 25) and the seven years from 1990 to 1996 (Figure 26). The choice of time periods has some effect on annual average growth rates. In particular, both sectors have experienced quite different rates of growth during specific periods of the 1990s, although the timing of trends has been different, both between sectors and among provinces, as discussed above. Because the 1990s have witnessed policies of health system reform and public expenditure restraint in virtually all jurisdictions, this decade is viewed separately in comparisons of expenditure trends.

_

The indexes used to measure inflation are the implicit price index for government current expenditure in the public sector and the Consumer Price Index health component in the private sector. Both indexes track prices separately in each province and territory (see Technical Notes).

1975 to 1990

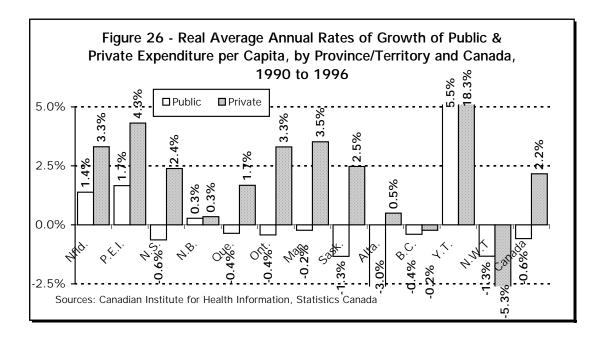

Public and private sector annual growth rates for Canada, and in most provinces, were close between 1975 and 1990. Growth rates between the two sectors were nearly identical in Nova Scotia, Manitoba and Alberta. Relatively large discrepancies between the two sectors were evident in Newfoundland, Quebec, Saskatchewan and the territories.

Public sector growth rates tended to be higher than the Canadian average in three of the Atlantic provinces and Saskatchewan, and lower in Quebec and PEI. The Northwest Territories experienced the highest rates of public sector expenditure growth while Yukon experienced the lowest. The four provinces from Nova Scotia to Ontario experienced the highest private sector growth rates; Saskatchewan had the lowest; the territories experienced decreases in private sector expenditure.

1990 to 1996

The trends in expenditure at constant prices between 1990 and 1996 tend to be closer to trends at market prices than they were in the earlier period, due to relatively low levels of inflation after 1992.

Public sector expenditure per capita at constant prices declined by an average of 0.6% annually between 1990 and 1996. Different trends were followed from east to west, with Newfoundland, Prince Edward Island and New Brunswick showing small increases, and all other jurisdictions, except the Yukon, experiencing decreases. Among the provinces, Alberta experienced the largest decline, followed by Saskatchewan. Even among provinces experiencing growth during this period, public sector expenditure growth was substantially less than its average during the previous 15 years.

Real private sector expenditure per capita in Canada grew at similar rates during the 1990s as during the previous 15 years (2.2% and 2.9% respectively). Figure 26 shows a wave-like pattern among provinces and territories, cresting in Prince Edward Island, Manitoba and Yukon. British Columbia and the Northwest Territories experienced declines, while the private sector grew in New Brunswick and Alberta by less than 1.0%.

1996 to 2001

By 1997, real per capita growth of public sector health expenditures was higher than in the previous year in all jurisdictions, except in Prince Edward Island and Yukon. Ontario and British Columbia experienced declines that were less than in the previous year. All jurisdictions experienced growth of between 2.5% and 16% in 1998 and/or 1999, except Quebec, which experienced growth of only two-tenths of one percent in 1999. According to forecasts, Prince Edward Island, Nova Scotia and the Northwest Territories have experienced declines in 2000. Declines in Prince Edward Island and Nova Scotia have been less than one percent, while the decline in the Northwest Territories has approached 11.0%. By 2001, it is expected that all jurisdictions, except Nunavut, will have experienced growth above 4.0% and up to 10.7% in Alberta.

All provinces, experienced increases in real private sector expenditures per capita in 1997. New Brunswick, Saskatchewan and Alberta experienced growth rates higher than 10%. By 1998, Prince Edward Island, New Brunswick, Quebec, Saskatchewan and the Yukon experienced declines, while Newfoundland grew by 13.4%. In 1999, Newfoundland expenditure contracted by 2.0% and all other provinces experienced growth of between 0.2% and 7.7%. Forecasts suggest that Prince Edward Island, New Brunswick, Quebec, Saskatchewan, Alberta, the Northwest Territories and Nunavut have experienced declines in real per capita private sector expenditure in 2000 and or 2001.

INTERNATIONAL COMPARISONS

According to the Organisation for Economic Cooperation and Development (OECD), Canada ranked third along with France among the Group of Seven (G-7) countries in the ratio of total health expenditure to GDP in 1998, at 9.3%. The United States had the highest ratio at 12.9% followed by Germany (10.3%) (Table 7a).

On a per capita¹⁷ basis, Canada's health expenditure ranked third among the G-7 countries in 1998, behind the U.S. and Germany. Canada had the second highest GDP per capita after the United States, outpacing Japan for the first time since 1995. Germany and Italy had the fourth and fifth highest GDP per capita. The relatively high health expenditure per capita of Germany in 1998 combined with its relatively lower GDP per capita produced a health to GDP ratio that was the second highest after the United States.

Source: *OECD Health Data 2001*, August 2001 update. Organisation for Economic Cooperation and Development and CREDES, Paris.

The latest OECD data does not provide figures for Germany's or Japan's per capita health expenditure, or health to GDP ratio for 1999. The ordinal position of Canada in terms of its health to GDP ratio did not change relative to those countries that did report in 1999 (Table 7b). Furthermore, the percentage difference in GDP per capita between Canada and Germany remained almost unchanged with GDP per capita in Canada at about 10% higher than in Germany, in 1999. Consequently, unless Germany eventually reports health care spending in 1999 that is more than 6.0% lower than what was reported in 1998, it is expected that Canada and France will have continued to have the third highest health to GDP ratios in 1999 among the G-7 countries, behind the United States and Germany.

¹⁷ Total health expenditure per capita and GDP per capita were converted to US dollars using purchasing power parities (PPPs) for G.D.P., which are designed to eliminate differences in price levels between countries—i.e. PPPs equalize the purchasing power of different currencies.

¹⁶ In general, international comparisons should be interpreted with caution as variation exists between countries with regard to reporting, inclusion, and classification of health expenditure.

The OECD GDP figures are standardized for international comparability; consequently, the total health expenditure to GDP ratios reported by the OECD may differ from those reported by the national health accounts of member countries. Specific to Canada, the GDP estimate published by Statistics Canada contains an amount for Financial Intermediation Services Indirectly Measured (FISIM). Statistics Canada removes the FISIM from the GDP estimate provided to the OECD. In addition, there is a time lag between both Statistics Canada's revision of the Canadian GDP and CIHI's revision of national health expenditure data, and their publication in OECD reports.

Table 7b—Indicators of Total Health Expenditure and Economic Strength, Group of 7 Industrialized Countries, 1999¹⁸

	Total Health	GDP per Capita		Total Health
	Expenditure per			Expenditure
	Capita			to GDP

■ Growth of TOTAL Health Expenditure

The G-7 countries with the highest ratios of health expenditure to GDP are compared in Figure 27 from 1975 to 2000. France and Germany's health to GDP ratios have been relatively close to Canada's over the last 15 years (particularly in 1989 and 1994). The health to GDP ratios of the remaining G-7 countries—Italy, Japan and the United Kingdom—have always been below those of the four countries represented.

In comparison to all other OECD countries, the United States has experienced consistently higher rates of growth in the ratio of total health expenditure to GDP through most of the last 20 years. During the late 1970s, Canada's total health expenditure to GDP ratio was relatively constant, but it grew steadily during the 1980s with significant increases during the recessions of the early 1980s and 1990s. The ratio began to decline after it peaked at 10.1% in 1992 as GDP growth outpaced the growth in health spending. By 1998, this had reversed with the growth of health spending increasing faster than GDP, producing a health expenditure to GDP ratio that was higher than it was in 1997. The health to GDP ratio of the G-7 and other selected country groupings from 1975 to 2000, is provided in Table 8. All countries in Table 8 experienced an increase in their health to GDP ratio over the period for which data are reported.

The OECD advises caution regarding cross-country comparisons and suggests that users of the data consult the notes provided by individual countries on data sources and methods. The notes on total health expenditure vary in detail by country and it is not always possible to determine precisely what types of expenditures are included or excluded. However, according to the country notes of OECD Health Data 2001 a number of countries indicate clear exclusions from their health expenditure total that are included in the Canadian total. For example, total health expenditure for Germany excludes expenditure on health research, military health and prison health, as well as private households' expenditure on patient transport and nursing care. The United States' total expenditure excludes expenditures on non-structural equipment such as X-ray equipment, computers, and beds. In the United Kingdom, public and private expenditure on nursing homes is not currently included in the total.

In addition, countries may differ not only in the boundaries between health and other social and economic activities but also in the classification methods and accounting rules that are applied and in the availability of data.

In order to improve the comparability of data across countries, the OECD, in consultation with its member countries has recently developed a common framework for international health accounts. ¹⁹ CIHI and agencies responsible for national health accounts in other countries are participating in an interactive process of pilot implementation of the proposed accounts with the OECD Secretariat.

http://electrade.gfi.fr/cgi-bin/OECDBookShop.storefront/EN/product/812000061P1.

¹⁹ The framework was published under the title, *A System of Health Accounts, Version 1.0,* in May 2000 and can be downloaded from the OECD Internet site at

Definitions

Health expenditure—includes any type of expenditure for which the primary objective is to improve or prevent the deterioration of health status.

This definition allows economic activities to be measured according to primary purpose and secondary effects. Activities that are undertaken with the direct purpose of improving or maintaining health are included. Other activities are not included, even though they may impact health. For example, housing and income support policies have social welfare goals as their primary purpose and are not considered to be health expenditures, yet they are recognized as powerful factors in determining population health.

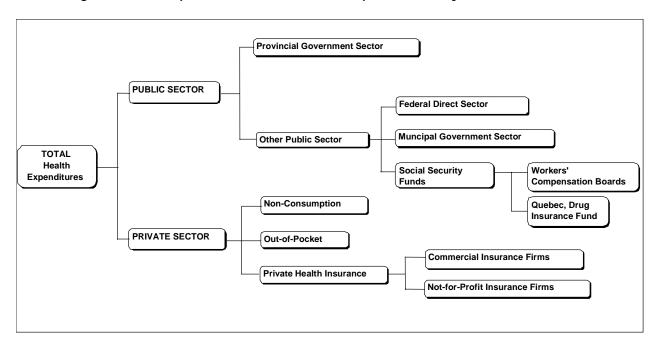

Figure 28—Composition of Total Health Expenditures, by Source of Finance

SOURCE OF FINANCE (SECTORS)

National health expenditures are reported based on the principle of *responsibility for payment* rather than on the source of the funds. It is for this reason, for example, that federal health transfers to the provinces are included in the provincial government sector since it is the responsibility of provincial governments to expend federal transfers on health services. The exception to this principle is that provincial government health transfers to municipal governments are included in the provincial government sector.

Public Sector—includes health care spending by governments and government agencies. It is sub-divided into four levels, as described below:

- 1. The Provincial Government Sector includes health spending from provincial/territorial government funds, federal health transfers to the provinces/territories, and provincial government health transfers to municipal governments.
- 2. The Federal Direct Sector refers to direct health care spending by the federal government in relation to health care services for special groups such as Aboriginals, the Armed Forces and veterans, as well as expenditures for health research, health promotion and health protection. Federal Direct health expenditure does not include federal health transfers to the provinces.
- 3. The Municipal Government Sector expenditure includes health care spending by municipal governments for institutional services; public health; capital construction and equipment; and, dental services provided by municipalities in the provinces of Nova Scotia, Manitoba and British Columbia. Designated funds transferred by provincial governments for health purposes are not included in the municipal sector, but are included with provincial government expenditure.
- 4. Social Security Funds are social insurance programs that are imposed and controlled by a government authority. They generally involve compulsory contributions by employees, employers or both, and the government authority determines the terms on which benefits are paid to recipients. Social security funds are distinguished from other social insurance programs, the terms of which are determined by mutual agreement between individual employers and their employees. In Canada, social security funds include the health care spending by workers' compensation boards and the drug insurance fund component of the Quebec Ministry of Health and Social Services drug subsidy program.

Health spending by Workers' Compensation Boards (WCB) includes what is commonly referred to by the provincial boards as medical aid. Non-health related items often reported by the Workers' Compensation Boards as medical aid expenditure such as funeral expenses, travel, clothing etc., are removed.

On January 1, 1997 the government of Quebec introduced a drug program that covered residents of the province, who were not otherwise covered by the provincial program or by private health insurance generally offered through employment. Drug claims for these participants of the new plan are paid from the Drug Insurance Fund. This component of the Quebec drug program is self-funded (i.e. it is funded through the compulsory payment of premiums and not by the provincial government of Quebec).

Private Sector—includes out-of-pocket expenditures made by individuals for health care goods and services; the health insurance claims paid by commercial and not-for-profit insurance firms, as well as the cost of administering those claims; non-patient revenues received by health care institutions such as donations and investment income; private spending on health-related capital construction and equipment; and, health research funded by private sources.

Data Quality—most private sector expenditures are estimated from survey data. Prior to 1996, the Family Expenditure Survey by Statistics Canada²⁰, an important source of private sector data, was not carried out annually; therefore, trend data have been imputed for years between surveys. Private sector data were revised following a methodology review in the early 1990s. The revised private sector data incorporated information estimated directly from new sources for 1988 and subsequent years. Prior years were estimated using trend data. As a result, readers should use caution when using the private sector expenditure data for small provinces and for years prior to 1988.

²⁰ Family Expenditure in Canada, Statistics Canada Catalogue Number 65-555. Statistics Canada, Periodical, Ottawa.

USE OF FUNDS (CATEGORIES)

Hospitals—are institutions where patients are accommodated on the basis of medical need and are provided with continuing medical care and supporting diagnostic and therapeutic services. Hospitals are licensed or approved as hospitals by a provincial/territorial government, or are operated by the Government of Canada and include those providing acute care, extended and chronic care, rehabilitation and convalescent care, psychiatric care, as well as nursing stations or outpost hospitals.

Other Institutions—include residential care types of facilities (for the chronically ill or disabled, who reside at the institution more or less permanently) and which are approved, funded or licensed by provincial or territorial departments of health and/or social services. Residential care facilities include homes for the aged (including nursing homes), facilities for persons with physical disabilities, developmental delays, psychiatric disabilities, alcohol and drug problems, and facilities for emotionally disturbed children. Facilities solely of a custodial or domiciliary nature and facilities for transients or delinquents are excluded.

Physicians—expenditures include primarily professional fees paid by provincial/territorial medical care insurance plans to physicians in private practice. Fees for services rendered in hospitals are included when paid directly to physicians by the plans. Also included are other forms of professional incomes (salaries, sessional, capitation).

The physician expenditure category does not include the remuneration of physicians on the payrolls of hospitals or public sector health agencies; these are included in the appropriate category, e.g. hospitals or other health spending.

Other Professionals—services, at the aggregate level represent expenditures for the services of privately practicing dentists, denturists, chiropractors, massage therapists, orthoptists, osteopaths, physiotherapists, podiatrists, psychologists, private duty nurses, and naturopaths. Discrete identification of many of the professions included under other professional services is often possible only when they are reported by provincial medical care insurance plans.

This category has been disaggregated at the Canada level in the Data Tables to provide information on the following sub-categories:

Dental Services—expenditures for professional fees of dentists (includes dental assistants and hygienists) and denturists, as well as the cost of dental prostheses, including false teeth and laboratory charges for crowns and other dental appliances.

Vision Care Services—expenditures for the professional services of optometrists and dispensing opticians, as well as expenditures for eyeglasses and contact lenses.

Other—expenditures for chiropractors, massage therapists, orthoptists, osteopaths, physiotherapists, podiatrists, psychologists, private duty nurses, and naturopaths.

Drugs—at the aggregate level, include expenditures on prescribed drugs and non-prescribed products purchased in retail stores. This category has been disaggregated at the Canada level in the Data Tables to provide information on the following subcategories:

Prescribed Drugs—substances sold under the Food and Drug Act which require a prescription.

Non-prescribed Drugs—include two sub-components; Over-the-Counter drugs; and, Personal Health Supplies.

- Over-the-Counter Drugs—therapeutic drug products not requiring a prescription.
- Personal Health Supplies—include items used primarily to promote or maintain health, e.g. oral hygiene products, diagnostic items such as diabetic test strips and medical items such as incontinence products.

The drug category does not include drugs dispensed in hospitals and generally in other institutions. These are included with the category of hospitals or other institutions.

Capital—includes expenditures on construction, machinery and equipment of hospitals, clinics, first-aid stations, and residential care facilities. (See also Technical Notes.)

Public Health and Administration—expenditures for items such as measures to prevent the spread of communicable disease, food and drug safety, health inspections, health promotion activities, community mental health programs, public health nursing and all costs for the infrastructure to operate health departments.

Other Health Spending—at the aggregate level includes expenditures on home care, medical transportation (ambulances), hearing aids, other appliances and prostheses, prepayment administration, health research and miscellaneous health care. This category has been disaggregated at the Canada level in the Data Tables to provide information on the following sub-categories:

Prepayment Administration—expenditures related to the cost of providing health insurance programs by either government or private health insurance firms.

Health Research—expenditures for research activities designed to further knowledge of the determinants of health, health status or methods of providing health care, evaluation of health care delivery or of public health programs. The category does not include research carried out by hospitals or drug companies in the course of product development. These amounts would be included with the hospital or drug categories respectively.

Other—expenditures for items such as home care, medical transportation (ambulances), hearing aids, other appliances, training of health workers, voluntary health associations, and occupational health to promote and enhance health and safety at the workplace.

The definition of home care that is currently in use in the National Health Expenditure Database is based on the definition used by the OECD, under which only the health professional component of home care is intended to be included. The portion that is commonly referred to as home support is considered to be a social service expenditure rather than a health expenditure and is excluded when it can be identified. A project is underway at CIHI to investigate the feasibility of developing a set of estimates that identify both the health professional and the home support components of home care.

OTHER TERMS

Federal Transfers—refer to the total of the various federal-provincial-territorial health financing arrangements, which include at various times the Canada Health and Social Transfer (CHST); the Canada Assistance Plan (CAP); Established Programs Financing (EPF); the Health Resource Fund which supported provincial capital health expenditures from the mid 1970s to the early 1980s; and, transfers by the Department of Indian and Northern Affairs to the territorial governments for the medical care and hospital insurance plans on behalf of Aboriginal peoples.

Canada Health and Social Transfer (CHST)—on April 1, 1996 the CHST replaced federal transfers for social assistance under the Canada Assistance Plan (CAP), and for health and post secondary education under Established Program Financing (EPF). The CHST is a block fund provided in the form of both cash transfers and tax point transfers to all provinces/territories in support of health, post-secondary education, social assistance and social service programs. Provinces may allocate the CHST to health and other social programs according to their particular priorities while upholding the criteria and conditions of the Canada Health Act. In 1996/1997 CHST transfers were allocated among the provinces and territories in the same proportions as provincial entitlements under the combined EPF and CAP transfers in 1995/96.²¹

Canada Assistance Plan (CAP)—introduced in 1966 by the federal government to share in eligible costs incurred by the provinces and territories in providing social assistance and welfare services to persons in need or persons likely to become in need if these services were not provided. The 1994 budget limited 1995/1996 CAP transfers for all provinces/territories at 1994/1995 levels.²²

Established Programs Financing (EPF)—prior to the introduction of the CHST the federal government contributed to the operation of provincial/territorial health insurance plans according to the provisions of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977 (EPF Act). Under the Act, provinces and territories were entitled to equal per capita federal health contribution increases according to a fixed formula (escalator).

²¹ Health Canada, Canada Health Act Annual Report, 1998–1999, 1999, p. 7.

²² Human Resources Development Canada, Cost Shared Programs, Provincial Entitlements under the Canada Assistance Plan, February, 1996, (unpublished).

Health contributions to the provinces consisted of both cash and an equalized tax transfer. The February 26, 1991 federal budget extended a freeze at 1989/1990 levels to 1994/1995. Legislation later provided for EPF entitlements to grow in 1995/1996 in accordance with the escalator, less three percentage points.

Gross Domestic Product (GDP)²³—is the unduplicated value of production originating within the boundaries of Canada, regardless of the ownership of the factors of production. Gross Domestic Product can be valued either at factor cost or at market prices. In this publication GDP is valued at market prices and is expressed in terms of the prices actually paid by the purchaser. It includes all indirect taxes, such as sales and excise taxes, customs duties and property taxes and also reflects the impact of subsidy payments.

Implicit Price Indices—see Technical Notes, Calculation of Constant Dollars.

Purchasing Power Parity (PPP)²⁴—Purchasing Power Parities (PPPs) are the rates of currency conversion that equalize the purchasing power of different currencies. In other words, PPPs are the rates of currency conversion which are designed to eliminate differences in price levels between countries.

Technical Notes

Data contained in the national health expenditure database are estimates. The data are collected from diverse sources and include varying classes of financial information. The data are collected and classified according to methods established by a Review Committee. CIHI analysts and external experts continue to improve the comprehensiveness, accuracy and currency of the data, in order to provide the most complete and objective estimates possible. Notwithstanding, national health expenditure data are estimates and should be used accordingly.

The following notes briefly describe some of the major technical points associated with the compilation of the health expenditure estimates. Additional information can be obtained by contacting the National Health Expenditure section by phone (613) 241-7860, by fax (613) 241-8120, or by e-mail nhex@cihi.ca.

HIERARCHY OF CLASSIFICATION

National health expenditures in Canada are based on a system of classification that is consistent with international standards developed by the Organisation for Economic Cooperation and Development (OECD) for reporting of health expenditures.²⁵

National health expenditures are grouped within the broad categories of Personal Health Care or Other Expenditures:

Personal health care consists of expenditure for health goods and services used by individuals.

Other health expenses consist of expenditures on behalf of society, such as public health; expenditures made as investments for purposes of future consumption, such as capital expenditures; the administrative expenses of planning and managing the health care system; and research.

Personal health expenditures are classified within categories that describe the type of health care used. Certain categories overlap. The hierarchy of classification that is used to allocate overlapping categories of expenditure is:

Institutional setting—health care services consumed in hospitals or other institutions are allocated to the institutional category if the institution purchases the services on behalf of its patients. For example, physicians services and drugs paid through hospital budgets are classified as hospital expenditures. This allocates expenditure to the supplier actually paid by patients or their agents in the form of government or insurance companies. It also reflects data availability.

50

Statistics Canada (Public Institutions Division) publishes estimates of government health expenditure as part of its comprehensive reporting system of all government expenditures, the Financial Management System (FMS). The FMS public sector health spending estimates are lower than those reported by CIHI because different classification methods are applied and a narrower definition of health expenditure is used in the FMS.

Self employed provider of service—for example, all expenses of physicians' practices are considered to be expenditures for physicians services, even though some of these expenses would be for employment of other health professionals, drugs or personal health supplies.

Type of good and service—drugs, personal health supplies and appliances are examples.

An exception to the hierarchy of classification is eye care, in which optometrists services, eyeglasses and contact lenses sold by optometrists and eyeglasses sold by opticians are combined as one category, vision care services.

The definitions and methods used in the preparation of this document are for the most part based on those adopted in 1994 by the National Health Expenditure Methodology Review Committee. This committee included representation from Health Canada, Statistics Canada, Ministère de la santé et des services sociaux du Québec, the Canadian Medical Association and the Canadian Healthcare Association. Some of the recommendations for change made during that process are still under development.

GENERAL METHODS

The following is intended as a general overview of the methods applied to calculate estimates of health expenditure in Canada. More detailed information can be obtained by contacting the National Health Expenditure section by phone (613) 241-7860, by fax (613) 241-8120, or by e-mail nhex@cihi.ca.

Provincial Government

Data are extracted annually from provincial/territorial government Public Accounts. Programs and/or program items are classified into health expenditure categories according to accepted and standardized methods and definitions used in estimating national health expenditure. Data from the Public Accounts are supplemented with information from provincial/territorial Government Department Annual Reports and Annual Statistical Reports when available, as well as, information provided by provincial/territorial government department officials. Total provincial government health spending figures include spending for health services reported by the provincial/territorial ministry responsible for health as well as by other departments that report spending on health according to National Health Accounts definitions.

Adjustments for regional health authority and/or hospital deficits or surpluses are not made in the National Health Expenditure Database unless the provincial government assumes them. Once assumed by the provincial government they are allocated to the years when the regional health authority and/or hospitals accumulated them.

CIHI's 1999/2000 estimates of provincial government health expenditure were submitted to provincial/territorial departments of health for review.

Provincial government figures identified as forecasts are based on the growth rates of major programs reported in provincial/territorial government Main Estimates and Budgets.

On April 1, 1999 Nunavut was formed from the eastern part of the Northwest Territories. N.W.T. expenditures for calendar year 1999 include expenditures for Nunavut for one quarter of the year ending March 31, 1999, prior to the formation of Nunavut. Consequently, expenditure data for N.W.T. for calendar year 1999 are not comparable to data for calendar years prior to 1999 or to 2000.

Private Sector

Private sector data were revised in 1995 following a methodology review that began in the early 1990s. Private sector data under the revised methodology incorporated information estimated directly from new sources for 1988 and subsequent years. Expenditure amounts prior to 1988 were estimated using trend data. Therefore, readers should exercise caution when using the private sector expenditure data for small provinces and for years prior to 1988.

Health Insurance claims by category and premiums are collected from 9 not-for-profit insurance companies and the Canadian Life and Health Insurance Association, which survey their member companies. The difference between claims and premiums is allocated to the category of prepayment administration, which relates to the cost of providing health insurance programs. Currently, health care spending data by insurance companies providing casualty insurance is not included in the estimates.

Out-of-Pocket health expenditures are based on purchased data from the Survey of Household Spending (SHS), formerly the Family Expenditure Survey, fielded by Statistics Canada. Only category data from section "P" of the survey on Direct Costs for Health Care are used; the SHS categories of "Other Medicines, Drugs and Pharmaceuticals" (i.e. not prescribed by a doctor) and, "Hospital Care" are replaced with data from other sources as described below. National health expenditure estimates are equal to the average expenditure per household for each category multiplied by the estimated number of households.

The SHS is an annual survey, which began in 1996. Prior to 1996, full surveys that included both urban and rural areas were carried out in 1986 and 1992. In 1990 a survey was conducted that included only metropolitan areas. In years when complete surveys are carried out, data are available for the ten provinces and for 17 urban centres. The urban centres include Yellowknife and Whitehorse, which are used to derive estimates of expenditure in the territories. Metropolitan expenditures per household tend to be somewhat higher than provincial estimates. All relevant categories were updated in complete survey years. In years when only urban surveys were carried out, the percentage changes in urban expenditures within each province or territory were used to update category estimates from complete survey years.

Between 1992 and 1996 when no surveys were conducted, provincial growth rates of the Statistics Canada variables of personal expenditure on medical care and dental care; drug and drug sundries; and, other health care, were used to impute missing years.

The SHS category of "Other Medicines, Drugs and Pharmaceuticals" i.e. not prescribed by a doctor, is replaced with information purchased from the research company A.C. Nielsen which tracks consumer sales of non-prescribed drugs sold in Canada at retail. Each year, A.C. Nielsen reports retail sales data for two consistent years for 48 plus non-prescribed drug categories. Data are reported by sales channel, 26 total dollar sales volume; and, by regional sales distribution for five regions that includes nine provinces. Newfoundland and the territories are not included. The data is processed by classifying the non-prescribed drug categories as either over-the-counter drugs or personal health supplies. Regional sales amounts are separated into nine provinces and estimates for Newfoundland and the territories are calculated, using provincial distributions of Direct Costs for Health Care from the SHS. Lastly, appropriate provincial and federal sales taxes are incorporated into the estimates.

The SHS category of Hospital Care is not used; instead the out-of-pocket component of hospital care is calculated based on income from patient services from Statistics Canada's Annual Return of Health Care Facilities (HS-2) and CIHI's Annual Hospital Survey (AHS), less hospital care from insurance sources.

Private sector estimates of other institutions are derived from data from Statistics Canada's Residential Care Facilities Survey (RCF). Data used from the survey include income to facilities from co-insurance or self-pay of residents; differential for preferred accommodation; and, sundry earnings. The last year that data was publicly available was from the 1993/1994 survey. Data in this report is based on preliminary figures provided in the 1994/1995 survey. Preliminary data used in previous reports for 1996/1997 and 1997/1998, has been updated with final data from those survey years. In addition, final data from the 1998/1999 survey has also been included. Data that is missing from the survey are imputed based on estimates by Statistics Canada and or CIHI.

The *Non-Consumption* component of the private sector includes non-patient revenue to hospitals including ancillary operations, donations, investment income etc. This data is derived from Statistics Canada's and CIHI's Hospital Surveys.

The non-consumption portion of the private sector also includes expenditures for biomedical and health care research by Canadian faculties of medicine derived from Medical Education Statistics published by the Association of Canadian Medical Colleges. Included are amounts for research funded by national and provincial not-for-profit foundations such as the Heart and Stroke Foundation of Canada, the National Cancer Institute of Canada, the Canadian Cancer Society, to name only a few. In addition, funding from local sources, internal university sources, university and unaffiliated hospitals, and foreign sources are also included. The sum of these amounts is provincially distributed according to the reported distribution of total amounts spent on research by the various faculties of medicine across the country.

.

As a general rule Statistics Canada definitions govern the classification of stores by class of trade. Sales channels include Drug Stores; Food Stores with Pharmacies; Grocery Banners; Mass Merchandiser and Warehouse Clubs, which are estimated from A.C. Nielsen's household panel data.

Capital expenditure in the private sector is also included as a non-consumption component category. Additional information on the calculation of capital can be found in the Technical Notes in the Calculation Methods section under Capital Expenditure and in the Forecasting Method section.

■ Federal Direct

Data on Federal Direct health care spending is derived from information provided by federal government organizations supplemented with information from the National Public Accounts. Federal government health care spending is generally provided according to the province in which the expenditure was made. Generally, where national data is provided it is provincially distributed by the appropriate population.

■ Municipal Government

Municipal Government health care spending is based on information provided by the Public Institutions Division of Statistics Canada. This data is supplemented with an estimate of spending by municipal governments on other institutions, which is based on information from Statistics Canada's Residential Care Facilities Survey.

Social Security Funds

In Canada, social security funds include the health care spending by workers' compensation boards and the drug insurance fund component of the Quebec Ministry of Health and Social Services drug subsidy program. The Workers' Compensation Board data are derived from special tabulations from each provincial and territorial Workers' Compensation Board of their medical aid expenditures. Income replacement and occupational rehabilitation is not included. Items included as medical aid that do not meet the National Health Expenditure definition of health expenditures such as funeral expenses, clothing expenses, hotel accommodation, and non-medical transportation are excluded.

The Workers' Compensation Boards data is supplemented in Quebec after 1996 with the portion of the Régie de l'assurance maladie du Québec's drug program that is not funded by the ministry of health and social services. See the definition of Social Security Funds in the Definitions section of this report for additional information.

CALCULATION METHODS

■ Calculation of Average Annual Rate of Growth

The Average Annual Rate of Growth is the constant annual rate necessary for a value at the beginning of a period to grow to a value at the end of a period over the number of compounding years in the period. The formula used to calculate the average annual rate of growth is:

 $= e^{-(ln(value \ at \ end \ of \ period)) - ln(value \ at \ beginning \ of \ period))/T}$

Where the constant e equals 2.718, which is the base of the natural logarithm, and T equals the number of years in the period.

Calculation of Calendar Year

Some information sources provide data in fiscal years. Calendar year data were derived by adding $\frac{3}{4}$ of one fiscal year to $\frac{1}{4}$ of the previous fiscal year.

Calculation of Constant Dollars

Real health expenditure and real per capita health expenditure are presented in constant 1997 dollars. Constant dollar expenditure was calculated using price indices for public and private expenditures in each province and territory. The indices are the implicit price indices (IPI) for government current expenditure, which are used to deflate public sector health care spending, and the health component of the Consumer Price Index (CPI), which are used to deflate private sector health care spending. Statistics Canada developed both sets of indices. A more complete explanation of the methodology for calculating implicit price indices is available in Statistics Canada publications.²⁷

In the health expenditure series, public and private expenditures are adjusted separately in each province using either the government or CPI (health) implicit price indices. Adjusted values are summed to obtain Canada totals at constant dollar values. Consequently, the overall implicit price index of the health expenditure series reflects the mix of public and private expenditures reported in the National Health Expenditure database.

Statistics Canada revised the government current expenditure implicit price index in 2001 as part of its overall revision to the methods for measuring the nation's economic activity.

The government current expenditure index was forecast for 1999 and 2000 for the provinces and territories. The forecasts are based on the Conference Board of Canada's forecasts of this index for Canada, Ontario and Quebec and CIHI's forecasts for the remaining provinces.

The CPI (health) index was forecast to December 2001 based on the average of the monthly index up to September 2001, which was the latest information available prior to the publication of this report.

²⁷ For example, Guide to the Income and Expenditure Accounts, Statistics Canada catalogue number 13-603E, Statistics Canada, Ottawa.

Calculation of TOTAL Health Expenditure as a Percent of Gross Domestic Product

The Gross Domestic Product at market prices²⁸ was used to express total health expenditure as a percentage of GDP. National GDP figures for Canada were used rather than the sum of provincial/territorial GDP to calculate the total health expenditure to GDP ratio for Canada.

Gross Domestic Product (GDP) figures provided by Statistics Canada were revised (upward) in 2001 as part of their overall revision to the methods for measuring the nation's economic activity. Revised GDP figures for Canada were available from 1975 to 2000. Revised provincial and territorial GDP figures were available from Statistics Canada from 1981 to 1999. No attempt was made by CIHI to estimate provincial GDP prior to 1981. Forecasts of Gross Domestic Product figures at both the national and provincial/territorial levels for 2001 were prepared by CIHI by applying the Conference Board of Canada's 2001 forecasted growth rate of GDP to the 2000 GDP figures from Statistics Canada.

Calculation of Per Capita Dollars

Per capita health expenditures were calculated using the most recent revised population estimates from the Demography Division of Statistics Canada. This takes into account the results of the census adjustment for net census under-count, non-permanent residents and returning Canadians. Population figures for 2001 are projections provided by the Demography Division of Statistics Canada.

■ Calculation of TOTAL Health Expenditure

Total health expenditure refers to the sum of the public and the private sectors. Canada refers to the sum of the 10 provinces and 3 territories. Total health care spending in constant 1997 dollars is the sum of public sector health care spending in constant 1997 dollars and private sector health care spending in constant 1997 dollars. Canada Average is the sum of provincial/territorial expenditures divided by the sum of provincial/territorial data of another variable, such as, population.

■ Capital Expenditure

Prior to a major methodology review in 1995, several categories in the private sector were estimated using a residual method, whereby public sector spending was subtracted from an estimated total. The remainder was allocated entirely to the private sector. Following the NHEX methodology review, capital expenditure remained as the only category that was estimated this way. In 1998, the method of calculating capital expenditure was reviewed and revised. Capital expenditure for the private sector, provincial and municipal government sectors, is now estimated from information obtained from the Investment and Capital Stock Division at Statistics Canada. Capital expenditure in the federal direct sector is obtained from the national public accounts and federal departments that provide health services. There are no capital expenditures in the Social Security Funds sector.

²⁸ Source: National Accounts and Environment Division, Statistics Canada

The implications of this change are twofold; capital expenditure in all sectors is based on full cost or cash basis accounting principles; and, capital is the only category of expenditure in which spending is categorized as private or public based on ownership of the facility in which the investment is made. This convention has been adopted due to data limitations.

FORECASTING METHODS

Provincial government sector health-spending forecasts for 2000 and 2001 are based on the growth rates of a consistent set of major health programs of provincial health departments reported in provincial Main Estimates and Budgets. In the case of territorial government forecasts of the Northwest Territories and Nunavut in 2000 and 2001, estimates were based on amounts reported in their Main Estimates. In other sectors, 2000 and 2001 figures for these two territories were calculated by developing a forecast for the Northwest Territories including Nunavut and breaking out Nunavut using population.

The 2000 figures for capital expenditure in the provincial government sector, the municipal government sector and the private sector are based on "preliminary actuals" from the Investment and Capital Stock Division of Statistics Canada. The 2001 capital figures are based on "intentions".

Forecasts for 2000 and 2001 for the remaining categories in the Federal Direct, Workers' Compensation Boards, Municipal Government and the Private sector were made entirely based on econometric analysis of time series trends. For each series, up to 40 different univariate forecasting specifications were evaluated, and the best one (based on the root mean square error of prediction) was selected. The functional forms studied included the exponential smoothing family (simple, double, Holt, Brown, Winters, damped trend, etc.); time trends; ARIMA specifications; etc. Logarithmic transformations were used when the data warranted its use.

Forecasts of health expenditures are identified in the figures by special symbols and in the Data Tables by the letter "f".

Gross Domestic Product figures at both the national and provincial/territorial levels for 2001 were forecast by CIHI by applying the Conference Board of Canada's 2001 forecasted growth rate of GDP to the 2000 GDP figures from Statistics Canada.

Population figures for 2001 are projections provided by the Demography Division of Statistics Canada.

The government current expenditure price index was forecast for 2001 for the provinces and territories. The forecasts are based on the Conference Board of Canada's forecasts of this index for Canada, Ontario and Quebec and CIHIs forecasts of the remaining provinces.

The CPI (health) index was forecast to December 2001 based on the average of the monthly index up to September 2001, which was the latest information available prior to the publication of this report.

AGE AND SEX DISTRIBUTION METHODS

The Series E Data Tables present provincial government health expenditure for selected categories of spending by sex and eight age groupings. This is the third year of a data development project to age-sex standardize per capita health expenditure by province. This year CIHI has presented five categories of expenditure for 1996 to 1999 and included an estimate of total provincial/territorial government expenditure by age, sex, and by province/territory for 1998 and 1999. The five categories presented are hospitals, other institutions, physicians, other professionals and drugs. The method of distributing the five categories and total is explained below. The data reported in Series E of the Data Tables are not age-sex standardized.

■ Hospitals

The distribution of provincial government hospital expenditure by age and sex is based on information from CIHI's Discharge Abstract Database (DAD) ²⁹ and Hospital Morbidity Database (HMDB). The CIHI 1999 Case Mix grouping methodology (CMGTM) was used to group patient discharge information into homogenous groups, based on clinical and resource utilization characteristics.

In the CMG methodology, patients are assigned to a group according to diagnosis and surgical procedures. Within each group patients are further classified into a complexity level based on the number and type of co-morbid diagnoses and the age of the patient. Once the patient is grouped, a Resource Intensity Weight (RIWTM)³⁰ is assigned. The assigned RIWs were then aggregated to generate total weighted cases by age and sex.

The provincial government hospital expenditure estimate for each province is allocated to a given age group based on the weighted cases in that age group relative to total weighted cases. Weighted case information from the DAD and Morbidity Database is for acute inpatient care only. Weighted cases for the majority of hospital-based ambulatory care (i.e. day surgery, emergency departments and clinics) is currently only available in one province. Nevertheless, acute inpatient weighted cases is used as a proxy to distribute the National Health Expenditure estimate of hospital expenditure financed by provincial governments, which includes inpatient and ambulatory care.

CIHI investigated the reasonableness of using the acute inpatient data as a proxy to distribute comprehensive provincial government hospital expenditures by comparing 1998/1999 weighted cases calculated from Alberta's Ambulatory Care data set with the Alberta acute inpatient weighted cases from the DAD/HMDB. The analysis showed that the distribution of ambulatory care weighted cases differs from inpatient weighted cases primarily in the senior age groups. The impact of including the ambulatory care weighted cases with the inpatient weighted cases is to lower per capita spending in the senior age groups from what it would have been based on the inpatient weighted cases only.

²⁹ The Discharge Abstract Database receives information from participating hospitals that represent about 85% of all hospital discharges in Canada. The database contains clinical, demographic and administrative data for inpatient acute, chronic and rehabilitation care and day surgery.

³⁰ RIWs are resource allocation algorithms, developed by CIHI for estimating the relative hospital resources used for a typical case. See http://www.cihi.ca/wedo/riw.shtml for more information.

Data from the DAD/HMDB covers 11 jurisdictions across Canada, the territories are combined due to the small number of facilities. The Yukon, Northwest Territories and Nunavut (1999) were distributed according to a combined territorial distribution. Data for Prince Edward Island and Saskatchewan from the DAD for 1995/1996 to 1997/1998 represents about 85% total acute hospitalizations within each province, however from 1998/1999 onward the DAD represents 100% coverage in these two provinces. Weighted cases for Quebec are based entirely on the Hospital Morbidity Database.

Caution should be exercised when comparing age and sex expenditure estimates across provinces, particularly with respect to Manitoba. Manitoba hospital utilization data is reported to CIHI differently than in other provinces and territories. In addition to acute inpatient care, Manitoba's weighted cases include chronic, rehabilitative and long-term hospital care, which results in higher weights applied to senior age groups, and ultimately higher spending in those age groups. CIHI is currently investigating methods of removing the additional cases in Manitoba to produce an age-sex distribution that is consistent with other provinces. Manitoba weighted cases were generated from the Discharge Abstract Database which represent approximately 65% of total acute hospital separations in Manitoba. All provincial/territorial data was provided in fiscal year and converted to calendar year (see Calculation Methods).

Physicians

The distribution of provincial government physician expenditure by age and sex is based on information from CIHI's National Physician Database (NPDB). The NPDB contains data on the socio-demographic and billing activities of fee-for-service physicians, as well as on the age and sex of patients. NPDB data is used as a proxy to distribute all physicians services expenditure from the National Health Expenditure database (NHEX). NHEX includes primarily professional fees, paid by provincial medical care insurance plans to physicians in private practice but also includes alternative payment methods such as salaries, sessional and capitation payments.

Fiscal year 1996/1997 data was unavailable from the NPDB for Nova Scotia, and was estimated using growth rates in the population by age and sex applied to the 1995/1996 fee-for-service data from the NPDB. Data for 1995/1996 was also unavailable from NPDB for New Brunswick. Similar to Nova Scotia, it was estimated using growth rates in the population by age and sex applied to 1994/1995 fee-for-services data from the NPDB. Yukon fee-for-service data from 1995/1996 to 1999/2000 was used to estimate the Northwest Territories by applying the Yukon fee-for-service per capita spending by age and sex to the Northwest Territories population for 1995/1996 to 1999/2000. Nunavut was derived from the Northwest Territories for 1999/2000 using population. Data was collected in fiscal year and converted to calendar year (see Calculation Methods).

Other Institutions

Statistics Canada's Residential Care Facilities Survey (RCF) was used to estimate the provincial/territorial age and sex distribution from 1995/1996 to 1999/2000 for other institutions. Facilities for Delinquents, Transients and others, were excluded from the age-sex distribution. Only facilities financed to provide a level of care for type II or higher were considered for the estimation. These levels of care require a minimum of at least one and a half-hours a day of medical and/or professional nursing supervision. Patient counts by age and sex and by predominant level of care within each facility were used to create the distributions.

In order for a facility's patient count to be included it was also necessary for the facility to report both income from provincial/territorial government sources and days of care for provincial government funded clients. Within a particular facility type, patient counts by age and sex were weighted based on the predominant level of care. Weights were generated using the estimated cost per patient for a particular type of care relative to type II. That is, type II care was the basis and had a weight of one. Once patient counts by age and sex, level of care, and facility type were assigned weights, the patient counts were aggregated to create total weighted provincial or territorial patient counts. A distribution across age and sex was generated and then applied to the appropriate provincial/territorial NHEX figure for other institutions. The age groups from the RCF, (< 10, 11–17, 18–44, 45-64, 65–69, 70–74, 75–79, 80–84, 85+), were expanded into 5-year age groups by CIHI using population, as well as DAD/HMDB Weighted Cases that were also used to distribute NHEX hospital expenditure (see age-sex distribution methodology for hospitals in this section).

At the time of publication data was unavailable for Quebec for all years. The weighted patient counts for Canada (minus Quebec) from the RCF for 1996/1997 to 1998/1999 was used as a proxy for Quebec's distribution of other institutions expenditure. Estimates for 1995/1996 and 1999/2000 were also generated using growth rates across age groups and gender in the population, applied to the 1996/1997 and 1998/1999 other institutions spending estimates by province and territory. Data was then converted into calendar year (see Calculation Methods).

■ Drugs

Provincial government prescribed drug expenditure primarily includes drugs that are dispensed through provincial drug subsidy programs. The level of coverage under these programs varies across the country. Universal drug plans with first dollar coverage to all residents are currently not available in any province. Most provincial government plans provide prescribed drugs to seniors, and welfare recipients. British Columbia, Saskatchewan and Manitoba provide some coverage to all residents with an assortment of substantial individual deductibles and co-payments. Similarly, Quebec instituted a universal plan in 1997 that requires Quebec residents to be covered under the provincial plan if a private group plan, usually available through an employer, is not available.

CIHI requested drug claims that were paid in a given year, by age and sex from each provincial drug subsidy program. Drug claim information by age and sex are currently unavailable from Newfoundland, Prince Edward Island and Nunavut in 1999.

Data from Nova Scotia consists of the Seniors Pharmacare Program and prescription drug claims paid by the Department of Community Services through the Income Assistance Program and Family Benefits Program. Data from the Special Drug Program was unavailable; expenditure for this plan was distributed using data from the Department of Community Services.

Data collected from the New Brunswick Prescription Drug Program consists of ten different drug plans. Age-sex data were provided for the following plans: Seniors Plan (A), Cystic Fibrosis Plan (B), Family and Community Social Services (E), Human Resources Development (F), Organ Transplant (R), Human Growth Hormone (T), and Nursing Home Program (V), leaving only three plans with no age and sex data: Children in Care (G), HIV (U), and Special Authorization (SA) (for drugs not normally covered under the provincial formulary). Beginning in October 1996, claims under SA are included in six other plans (A, B, G, R, T, and V) if the claimant is a beneficiary of one of these plans. In September of 1997 this was expanded to include plans E and F. Minor plans for which age-sex data were not available were distributed using the overall distribution of plans for which data was available.

The Quebec Ministry of Health and Social Services supplied data on its drug subsidy program in calendar year. The plans included coverage for seniors, income security recipients, and others. Data for 1997 to 1999 also included a general client group representing recipients whose drug claims are paid through the self financed drug insurance fund by the premiums of subscribers to the plan and not the provincial government. Consequently, the age-sex distribution of this group was not included with the rest of the provincial government program.³¹

The Ontario Drug Benefits program (ODB) supplied age-sex data, which included combined prescription drug claims paid by both the Ministry of Health and Ministry of Community Services, as well as data for the Trillium Drug Program, which was implemented in April 1995. The Special Drug Program does not have an age-sex profile; its expenditure was therefore applied to the ODB distribution.

Manitoba was unable to provide data for fiscal year 1996/1997 because of the Drug Programs Information Network (DPIN) conversion from a calendar year to a fiscal year system. This resulted in a 15-month year from January 1996 to April 1997. Data on drug claims paid for fiscal year 1997/1998 to 1999/2000 was supplied by the Department of Health's Pharmacare plan. Data for the Ministry of Family Services, Employment and Income Assistance Division's drug plan was supplied for 1997/1998 and 1998/1999. 1999/2000, however, was not provided in time for publication, therefore this component is based on previous year's data. The figures reported for Manitoba in 1997 are based on fiscal year data for 1997/1998.

³¹ See the definition of Social Security Funds in the definitions section of this report for more information.

Data supplied by the Saskatchewan Drug Plan and Extended Benefits Branch was in calendar year.

Alberta Health and Wellness provided expenditure data by age and sex on their prescription drug programs from 1995/1996 to 1999/2000. Data was supplied for all four prescription drug plans: Seniors, Widow's Pension, Regular and Palliative Care. Data from Alberta Human Resources and Employment are for the departments' prescription drug expenditure under the Employment and Income Assistance programs (formerly under Alberta Family and Social Services) was provided for 1995/1996 to 1998/1999. 1999/2000, however, was not provided in time for publication, therefore this component is based on the previous year's data.

British Columbia Ministry of Health and Ministry Responsible for Seniors supplied claims paid by age and sex of the client in calendar year from 1996 to 1999 for each plan administered by their Pharmacare program. NHEX drug plan expenditures for British Columbia were converted to calendar year and then applied to the distribution of the appropriate data supplied by the province.

The Yukon Department of Health and Social Services supplied drug expenditure claims for three administered drug plans: Seniors, Child Drug Plan, and Chronic Care Drug Plan. Data from 1995/1996 to 1999/2000 was provided for each plan with the exception of the Child Drug Plan, which was implemented in 1997/1998.

Northwest Territories Department of Health and Social Services supplied data by age and sex for prescription drug claims paid for Extended Health Benefits (EHB).

The provincial government drug estimate at the program level is allocated to a given age group based on the value of claims paid in that age group relative to total claims paid. In provinces with more than one program, the age-sex-distributed programs were combined to represent a total estimate for the province. Most data were collected in fiscal year and converted to calendar year (see Calculation Methods).

Other Professionals

Other professionals expenditure account for approximately 1% of total provincial/territorial expenditure in 1999. Provincial/territorial governments provide a variety of health services delivered by health professionals including primarily dentists, optometrists, chiropractors and physiotherapists. All provinces provide various programs for seniors and children, as well as programs for income assistance recipients. However, the services provided vary considerably across Canada. For instance, Ontario, British Columbia, and Quebec provide physiotherapy services to residents, while other provinces do not. Chiropractic services are provided through provincial insurance plans from Ontario west to British Columbia, but nowhere else in Canada. Target populations, co-payments and deductibles also vary from provinces to province. CIHI requested from each province data for claims that were paid for by provincial/territorial governments in a given year, by age and sex, and type of service provided by other health care professionals. Details of data availability and estimation methods are described below.

Data was unavailable from Prince Edward Island, New Brunswick and Nunavut in 1999. The remaining provinces and territories were able to supply data by age and sex for 75% or more of other professional services. When a province or territory was unable to supply 100% of services, CIHI estimated the age and sex distribution for these services by using data from programs from other provinces with similar coverage and eligibility levels.

The provincial government expenditure estimates for other professionals at the program level is allocated to a given age group based on the value of claims paid in that age group relative to total claims paid. In provinces with more than one program the age-sex-distributed programs were combined to represent a total estimate for the provinces' other professionals expenditure. Most data were collected in fiscal year and converted to calendar year (see Calculation Methods).

■ Total Provincial Government Health Expenditure by Age and Sex

To age-sex standardize total provincial government health expenditures it is necessary that all categories of expenditure be distributed by age and sex for each province. Unfortunately age-sex distributions for all provincial/territorial government expenditures is currently not available in all provinces and territories. Consequently, CIHI estimated the missing data using the following methods. The age-sex distributions of drug subsidy programs for Newfoundland, Prince Edward Island and Nunavut were estimated for 1998 and 1999 using the distributions of drug subsidy programs in other provinces with similar target populations and co-payment plans. Newfoundland's age-sex distribution was based on New Brunswick's Seniors, Community and Social Services drug plans (plans A, E and F). Prince Edward Island's age-sex distribution for drug expenditure was based on the Nova Scotia Seniors and Community Services drug plans. Nunavut's age-sex distribution is based on the Northwest Territories data.

The age sex distributions of the other professionals category in Prince Edward Island, New Brunswick and Nunavut (1999) were estimated for 1998 and 1999. The age-sex distributions of these provinces were based on the distributions in other provinces of other health care provider programs that had similar beneficiaries and co-payment plans. Dental expenditure by age and sex in PEI was based on the Newfoundland Dental Health Plan clients from 3 to 16 years of age. Similarly, New Brunswick's dental expenditure for the youth income assistance plan was based on clients up to 17 years of age from the Newfoundland dental plan. New Brunswick's age and sex distribution for the income assistance optometry plan was based on Saskatchewan Health's Supplementary Health Optometry plan. As was the case with Nunavut drug expenditure, Nunavut's other professionals expenditure was based on the age-sex distribution for the Northwest Territories. Quebec's physiotherapy expenditure is distributed across a combined age-sex distribution of Ontario and British Columbia's fee-for-service physiotherapy plans.

Capital expenditure was estimated for all provinces and territories by using the general provincial/territorial populations by age and sex. This method was used based on two criteria: (i) capital investments in health care institutions typically last for decades and those who do not use institutional services in a given year may use them in the future; (ii) given the uncertainty of illness the availability of facilities has a value for all who potentially would use them if the need arises.

The remaining categories of Public Health & Administration and Other Health Spending were also estimated using the general provincial/territorial populations by age and sex based on the following rationale. Public health and health research benefit the entire population and it would be difficult to attribute them in different proportions to specific age and sex groups. Prepayment administration expenditures are accounted for mainly by the universal hospital and physicians services plans. The rationale for distributing them according to the general population rather than based on utilization lies in the fact that prepayment administration expenses are made up largely of the costs of registration systems for eligible residents, which cover the total population, and claims processing costs. The convention of allocating ambulance expenditure by population distributions is not believed to result in significant error of the total provincial expenditure distributions due to its small share of the other health spending category.

■ Age-Sex Standardization of Provincial Government Expenditures

For the purpose of age-sex standardization CIHI used a direct method. Standardized expenditures by category were calculated by multiplying the male and female population of Canada in each of the 19 age groups by the expenditure per capita for each age group and sex by province and territory. Male and female standardized expenditure was aggregated and then divided by the total Canada population in 1998 and 1999 to generate the standardized per capita spending for a particular category by province and territory.

HISTORICAL DATA REVISIONS

In the process of compiling the National Health Expenditure series new information becomes available, methods are refined, and data sources are improved. The data are revised to incorporate these enhancements.

Provincial Government Sector

CIHI's 1999/2000 estimates of provincial government health expenditure were submitted to provincial departments of health for review. Most of the revisions in this section are based on comments from that process. A summary of the changes is presented below.

Newfoundland—An adjustment to ambulance spending in the amount of \$0.5 million in 1997 was made. Other institutions was revised downward in 1998 by \$4.2 million, due to a methodological refinement.

Prince Edward Island—Estimates in 1996, 1997 and 1998 were revised for other institutions and other health spending due to a methodology refinement. This resulted in the reduction of \$0.2 million to the 1996 estimate, \$0.3 million to 1997 and \$0.1 million to 1998.

Ontario—A revision to public health based on new information was made from 1992 to 1998. The changes resulted in a decrease in public health spending ranging from \$1.1 million in 1992 to \$2.3 million in 1998.

Saskatchewan—Based on new information public health was revised from 1989 to 1991 and from 1996 to 1998. Public health revisions in 1989 to 1991 range from \$0.2 million to \$1.7 million, and from 1996 to 1998 range from \$0.4 million to \$1.2 million.

Alberta—Revisions to ambulances in 1991, 1992 and 1998 were made based on new information. In 1993 figures were revised downward in hospitals, other professionals, drugs, public health and other health spending, totaling \$52.8 million. In 1994, figures were revised downward in the same categories as in 1993 in addition to other institutions, total revisions came to \$84.8 million. In 1995, 1996 and 1997, figures were revised downward in hospitals, other institutions, public health and other health spending. Total revisions in 1995 were \$54.4 million; 1996, \$14.5 million; and 1997, \$1.3 million.

British Columbia—The category of other professionals was revised in 1987 and 1988 due to new information. In 1992 and 1993 there were minor downward revisions to hospitals, other institutions and public health, totaling \$4.5 million in 1992 and \$1.5 million in 1993. Due to methodology refinements all categories (excluding capital) experienced minor changes totaling \$8.3 million in 1998.

Yukon—Drugs and other health spending were revised in 1989 based on a methodology refinement.

Northwest Territories—Hospital and physician services were revised downward in 1997 and 1998 as adjustments were made to ensure that reciprocal billings are captured consistently.

The differences between the revised and original figures in the provincial government sector for the provinces and territories, including revisions to the estimates of capital expenditures, are summarized below (Table 9).

Table 9—Differences from Previously Reported Provincial Government Sector Data by Province/Territory and Canada, 1987 to 1998 (\$ millions)

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nun.	Canada
1987										-2.5				-2.5
1988										-0.8				-0.8
1989								1.7			0.1			1.8
1990								1.2						1.2
1991								0.2	2.4					2.7
1992						-1.1			0.8	-4.5				-4.7
1993						-1.6			-52.8	-1.5				-55.8
1994						-1.9			-84.8					-86.8
1995						-1.9			-54.4					-56.3
1996		-0.2				-1.8		1.2	-14.5					-15.2

1998	-4.2	-0.1				-2.3		0.9	-0.3	8.3		-1.5		0.9

Private Sector

All the categories in the private sector from 1996 to 1998 were affected by the revisions from Survey of Household Spending where the data was re-weighted based on 1996 Census population.

Hospital spending was revised in all jurisdictions from 1995 to 1998 based on new data from the Annual Hospital Survey.

Spending on other institutions in this sector was revised in all jurisdictions from 1996 to 1998 due to new information from the Residential Care Facilities Survey fielded by Statistics Canada.

Health research was also revised in most provinces in 1998.

Total differences from 1994 to 1998 between the revised and previous expenditure estimates in the private sector for the provinces and territories are listed below (Table 10).

Table 10—Differences from Previously Reported Private Sector Data by Province/Territory and Canada, 1988 to 1998 (\$ millions)

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nun.	Canada

■ Federal Direct Sector

Since 1999, provincial level data in the federal direct sector have been collected directly from federal departments and are augmented with information from the National Public Accounts. This year, more detailed information was obtained for the historical data from most federal departments such as the Department of Health Canada, Veterans Affairs Canada (VAC) and National Defense. Consequently, the following revisions were made to reflect this enhancement:

- A significant amount of social services (primarily from Veterans Independence Program provided by VAC), which was imbedded in other health spending, was removed from 1988 onward. This was the major cause of the decrease in the total for in this sector.
- Some inter-governmental transfers were identified and excluded from 1997 onward. The result was a decrease in public health and health research.
- Missing data for health research was added back to the NHEX database or the estimates were replaced by actual data. Health research was the category affected most.
- Reclassifications occurred throughout the years between the categories such as hospitals, drugs and other spending.

The differences between revised and original figures in each jurisdiction are summarized below (Table 11).

Table 11—Differences from Previously Reported Federal Direct Sector Data by Province/Territory and Canada, 1988 to 1998 (\$ millions)

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nun.	Canada

Municipal Government Sector

Spending on other institutions in this sector was revised in all jurisdictions from 1996 to 1998 due to new information from the Residential Care Facilities Survey fielded by Statistics Canada. The total amounts of the revisions are listed below (Table 12).

Table 12—Differences from Previously Reported Municipal Government Sector Data by Province/Territory and Canada, 1994 to 1998
(\$ millions)

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nun.	Canada

1998	0.1		-6.5	0.8		182.2	2.6	30.0	14.5	20.5				244.3

Social Security Fund Sector

Occupational health in Alberta was revised to include relevant expenditures by Safety Associations and the Voluntary Incentive Plan since 1986. Revisions in Newfoundland from 1994 to 1997 and in Manitoba in 1998 were the result of a historical data review. The revisions are summarized below (Table 13).

Table 13—Differences from Previously Reported Social Security Fund Data by Province/Territory and Canada, 1986 to 1998 (\$ millions)

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nun.	Canada

1996	0.1								14.1					14.2
1997	0.2								8.0					8.2
1998							0.1		6.6					6.7

Age and Sex Expenditure Data

Changes to the age-sex distributions from the 1999 publication occurred due to methodology revisions and new information from data sources. For more detailed information please contact the NHEX section by telephone, (613) 241-7860 or by email nhex@cihi.ca.

Economic and Demographic Data

Statistics Canada recently revised their population estimates. The estimates in this report are now based on the latest released data of October 2001. As part of their overall revision to the methods for measuring the nation's economic activity Statistics Canada also revised estimates of Provincial Government Programs Spending; Provincial and National Gross Domestic Product; and the Implicit Price Index for Government Current Expenditure used in this report.

SOURCES OF DATA

National Health Expenditure estimates are compiled based on information from the following sources.

Provincial Government Sector

- Provincial Public Accounts and Main Estimates
- Provincial Departments of Health Annual Reports and Statistical Supplements where available
- Annual Reports of various foundations, agencies and commissions
- Special tabulations and specific information from various provincial departments reporting health expenditures.
- Federal Transfers as a part of Provincial Government spending:
 - EPF, CHST—Federal-Provincial Relations Division, Federal Department of Finance
 - CAP—Cost Shared Programs Division, Human Resources and Development Canada
 - Contributions to the Governments of the Northwest and Yukon Territories— Public Accounts of Canada, Department of Indian Affairs and Northern Development
 - Health Resource Fund—Health Canada

■ Federal Direct Sector

- Public Accounts of Canada
- Special tabulations/information from:
 - Health Canada
 - Department of Veterans Affairs
 - Department of National Defense
 - Solicitor General of Canada
 - Statistics Canada
 - Citizenship and Immigration Canada
 - Several organizations that are responsible for administering research funds from federal government such as Canada Foundation for Innovation, Canadian Health Services Research Foundation and the Canadian Institute for Advanced Research

■ Social Security Funds Sector

- Special tabulations on medical aid spending provided by the provincial/territorial Workers' Compensation Boards
- Annual Reports of provincial/territorial Workers' Compensation Boards
- Annual Report of the Régie de l'assurance-maladie du Québec

Municipal Government Sector

- Special tabulation purchased from the Public Institutions Division of Statistics Canada
- Special tabulations from the Residential Care Facilities survey administered by the Health Statistics Division of Statistics Canada

■ Private Sector

- Private Insurance Component
 - The not-for-profit portion is captured from special tabulations provided by the not-for-profit insurance companies.
 - The commercial portion is captured by a special tabulation provided by the Canadian Life and Health Insurance Association (CLHIA).

Out-of-pocket Component

- Survey of Household Spending, Statistics Canada (formerly the Family Expenditures Survey (FAMEX)), except for the following categories
- Hospitals—(adjusted income from patient services) Annual Return of Health Care Facilities, fielded by Statistics Canada to 1994/1995, and the Annual Hospital Survey fielded by CIHI from 1995/1996 to 1999/2000
- Other Institutions—Residential Care Facilities Survey fielded by Statistics Canada
- Over-the-Counter Drugs and Personal Health Supplies—Market Review of Selected Drug Categories at Retail, a special tabulation purchased from AC Nielsen Canada

Non-consumption Component

- Hospitals—(adjusted income from non-patient services) Annual Return of Health Care Facilities, Part 2 fielded by Statistics Canada to 1994/1995 and the Annual Hospital Survey fielded by CIHI from 1995/1996 to 1999/2000
- Capital Expenditures—special tabulation purchased from the Investment and Capital Stock Division of Statistics Canada
- Health Research—The Association of Canadian Medical Colleges, Canadian Medical Education Statistics, Expenditure for Biomedical and Health Care Research of Canadian Faculties of Medicine by Source of Funds

Age and Sex Data

- CIHI's Discharge Abstract Database (DAD) and Hospital Morbidity Database (HMDB)
- CIHI's National Physician Database (NPDB)
- Special tabulations provided by provincial/territorial government departments responsible for administering drug and other health benefit programs
- Statistic Canada's Residential Care Facility Survey (RCF)

■ Economic and Demographic Data

- Gross Domestic Product
 - 1975–2000: purchased from National Accounts and Environment Division, Statistics Canada
 - 2001: purchased from Conference Board of Canada (GDP growth rates)
- Population: purchased from the Demography Division, Statistics Canada
- Price Indices
 - 1975–2000: Income and Expenditure Accounts Division and Prices Division, Statistics Canada
 - 2001: purchased from Conference Board of Canada

Data Tables

This section provides the detailed health expenditure data. These data tables are organized as follows:

Series

- A—Summary Data, Canada
- B—Total Health Expenditure, by Source of Finance, by Province/Territory and Canada
- C—Health Expenditure, by Use of Funds, by Source of Finance, Canada
- D—Health Expenditure, by Use of Funds, Source of Finance, by Province/Territory
- E—Provincial Government Health Expenditure, by Selected Uses of Funds, by Age and Sex, by Province/Territory and Canada

Each series generally follows the order below except as indicated. In addition, tables in A.3, Series C, Series D and Series E are not available in constant dollar values.

Current dollars

- in millions of dollars
- percentage distribution (Use of Funds only)
- per capita
- sector as a proportion of:
 - GDP (B.1 only)
 - total health expenditure (B.2 to B.8 series only)
 - total provincial/territorial government program/expenditure (B.4 series only)

Constant dollars

- in millions of 1997 dollars (A and B series only)
- in 1997 dollars per capita (A and B series only)

Most sub-series also includes a table of annual percentage changes.

In all tables, forecasts are denoted with the letter "f" and the symbol "---" denotes data that is either unavailable or not applicable.

Series A Summary Data, Canada
