

# Value of Farm Capital

## Agriculture Economic Statistics

May 2003

Statistics Canada  
Agriculture Division  
Farm Income and Prices Section

Catalogue No. 21-013-XIE is a semi-annual publication available free on the Internet at <http://www.statcan.ca>

### Highlights

#### Value of farm capital decreased slightly in 2002

In 2002, Canada's farm capital value reversed a long upward trend which began in 1988, decreasing slightly by 0.1% to \$189.2 billion. Total farm capital increased 5.7% above the previous five-year average.

Saskatchewan accounted for the largest decrease in total capital value, falling 2.1%, while Newfoundland recorded the largest increase (+5.0%).

The value of land and buildings, which accounted for 74.2% of total farm capital value, rose 0.9% from the 2001 level to \$140.4 billion. The total value of land and buildings was 5.6% above the previous five-year average. The value per acre for Eastern Canada and Western Canada averaged \$2,260 and \$540 respectively.

---

#### Note of Appreciation

Canada owes the success of its statistical system to a long standing co-operation between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

June 2003

La version française de cette publication est disponible (n° 21-013-XIF au catalogue).

The value of machinery and equipment, which accounted for 17.3% of total farm capital, increased slightly to \$32.7 billion. The value of tractors, combines and other farm machinery, the largest component (80.0%) of the value of machinery and equipment, increased 2.4%, while trucks increased 2.6% and autos were almost unchanged. In 2002, the value of machinery and equipment rose 5.8% above the previous five-year average.

The value of livestock and poultry, which accounted for 8.5% of total farm capital value, decreased 11.6% to \$16.1 billion. Cattle and calves, the largest component (87.9%) of the value of livestock and poultry, decreased 11.3% to \$14.1 billion from 2001, although remained 6.4% above the previous five-year average. The value of pigs, which represented 8.8% of the total value of livestock and poultry, fell 16.6% to \$1.4 billion from 2001, but was 5.4% above the previous five-year average. The value of poultry decreased 3.8% to \$342.9 million.

## Symbols

The symbols described in this document apply to all data published by Statistics Canada from all origins including surveys, censuses and administrative sources, as well as straight tabulations and all estimations.

- . figures not available for any reference period
- .. figures not available for a specific reference period
- ... figures not appropriate or not applicable
- P** preliminary
- r** revised
- x** suppressed to meet confidentiality requirements of the Statistics Act
- E** use with caution
- F** too unreliable to be published

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136.

## CONCEPTS AND METHODS

### Introduction

This publication is part of a series of bulletins that also includes:

- Net Farm Income - Agriculture Economic Statistics (21-010-XIE),
- Farm Cash Receipts - Agriculture Economic Statistics (21-011-XIE),
- Farm Operating Expenses and Depreciation Charges - Agriculture Economic Statistics (21-012-XIE),
- Farm Debt Outstanding - Agriculture Economic Statistics (21-014-XIE),
- Direct Payments to Agriculture Producers - Agriculture Economic Statistics (21-015-XIE),
- Balance Sheet of the Agriculture Sector - Agriculture Economic Statistics (21-016-XIE),
- Agriculture Value Added Account - Agriculture Economic Statistics (21-017-XIE),
- Farm Business Cash Flows - Agriculture Economic Statistics (21-018-XIE).

This particular publication includes 1941 to date estimates of the value of farm capital and its components, for the provinces and Canada at July 1 of each year. There was little impact on the series when Newfoundland and Labrador estimates began in 1976, as they represented only 0.1% of Canada's total capital value estimate.

All series can be obtained free on the internet at the Statistics Canada web site ([www.statcan.ca](http://www.statcan.ca)). Notes on concepts and methods are also included for each data series.

The electronic publication is first available in June. It includes preliminary estimates for the calendar year just ended. The following December, the publication is re-issued with revisions to the preliminary estimates. Revisions to the June issue can extend back two years, while those in December generally apply to three years. The date provided at the top right corner of each table is the last time that a revision was made to that table.

Most data appearing in this publication are available through the Canadian Socio-Economic Information Management System (CANSIM II), Statistics Canada's corporate computerized data base network and information retrieval service.

The Client Services, Agriculture Division, Statistics Canada can be contacted at 1 (800) 465-1991 or by email at [agriculture@statcan.ca](mailto:agriculture@statcan.ca) for further information and/or to obtain data in a different medium.

Statistics Canada is committed to ensuring that there is no disclosure of confidential material and therefore all data are subjected to restrictions prior to release.

### Concepts

The value of capital estimates the market value of capital employed in the production of agricultural commodities, regardless of whether the capital is owned or leased. The three components of farm capital are: livestock and poultry, land and buildings, and farm implements and machinery.

The value of livestock and poultry estimates the market value of cattle, hogs, sheep, chickens, turkeys, mink and fox on farms. Based on the 1996 Census of Agriculture, the value of animals not included (horses, ponies, goats, rabbits, bee colonies, elk, buffalo, llamas, ostriches, etc.) is estimated to equal 9% of the published value of livestock and poultry. Horses and ponies account for 73% of the value of those not accounted for.

The value of land and buildings estimates the market value of real estate used for agricultural production. It includes the value of all property operated by the holding, whether owned or rented from others, but excludes the value of property rented to others. It also excludes the value of farm offices not located on farm holdings, even though they are assets used to produce agricultural products. The impact of this limitation on the data is considered to be insignificant.

The market value of all farm machinery and equipment on agricultural holdings is estimated, regardless of ownership. Separate estimates are made for autos, trucks and other farm machinery.

### Methods and Data Quality

The numbers and values of the various components of farm capital are estimated each year, until the data become available from the succeeding Census. The estimates are then benchmarked to the Census and intercensal revisions are undertaken to adjust the estimates for the intercensal years.

The value of livestock and poultry is estimated for each province, based on farm inventories and average farm values per head for cattle, hogs, sheep, chickens, turkeys, mink and fox. Estimates of livestock numbers on farms as of July 1 are published in Livestock Statistics, Statistics Canada Catalogue 23-603-XPE. The values per head are estimated by the Agriculture Division's Farm Income and Prices Section in consultation with provincial statisticians. The value per head estimate uses the best data available, and is deemed to be of acceptable quality.

The value of land and buildings is calculated by multiplying the value per acre of farm land and buildings by provincial estimates of the total area of land. The methods used to estimate value per acre are explained below.

Provincial estimates of the total area of land are made by multiplying the previous year's estimate by the annualized change in the total area of land between the two previous Censuses. This assumption is not unreasonable given the fact that the quantity of agricultural land is subject to only minor changes.

The values of automobiles and trucks are calculated for each province by multiplying the previous year's estimate by price and quantity change indicators. Year-over-year changes in the Farm Input Price Index (FIPI) for auto replacement and truck replacement, published by Prices Division, are used as provincial price change indicators. The quantity change indicator for automobiles and trucks is the annualized change in numbers between the two previous Censuses.

The value of other machinery is estimated using a constant dollar, perpetual inventory model which accounts for investment and depreciation. Other farm machinery is valued at the aggregate level only, as the information needed to prepare estimates by type of farm machine is not available. Estimates of national investment are made by multiplying the previous year's estimate by a change indicator which is primarily derived from data on sales of farm machinery, excluding repair parts, by Canadian Farm and Industrial Equipment Institute (CFIEI) members. CFIEI is a coalition of most of the large manufacturers of farm machinery and implements, and of other associations that represent the industry. Shipments by agricultural implement manufacturers, from the Survey of Manufactures, plus imports minus exports, are also used as indicators in estimating national investment.

National investment is allocated provincially using proportions derived from the Census of Agriculture and the biennial Farm Financial Survey. Depreciation is estimated as explained in the publication *Farm Operating Expenses and Depreciation Charges - Agriculture Economic Statistics (21-012-XIE)*. Provincial FIPI for machinery replacement is used as the deflator to convert between constant and current values.

Investment is estimated using the value of all sales of farm machinery and equipment by manufacturers as a proxy, and may be underestimated because: 1) farmers may purchase used machinery and equipment from outside the sector; and 2) farmers may be making purchases of capital assets not classified as agricultural implements. Although the estimate includes the value of agricultural implements sold to non-farmers, such as cemeteries, parks, and commercial or private users, these sales outside the agriculture sector account for very little of the total sales, and the overall investment estimate is judged to be underestimated.

The preliminary change indicator for investment is based on the year-over-year change of the value of CFIEI members' sales, which does not include the value of smaller, specialized manufacturers who are not CFIEI members. This change is assumed to be equivalent to the year-over-year change of the industry's sales.

The 1996 intercensal revisions increased total capital value by 3%. The value of livestock and poultry revisions increased by less than 1%. The value of land and buildings increased by 5%. Revisions to the value of machinery resulted in a 3% decrease.

Intercensal revisions undertaken after a Census of Agriculture are generally of greater magnitude than annual revisions. Although respondents to the Census do have some difficulties in accurately estimating the present market value of their assets, the Census of Agriculture estimates are considered to be the best available.

### **VALUE PER ACRE OF FARM LAND AND BUILDINGS**

National and provincial estimates of the value per acre at July 1 are included in this publication for 1921 to date. Newfoundland and Labrador estimates begin in 1976. These estimates are on the CANSIM II database.

#### Concepts

Value per acre of farm land and buildings reflects the value of all farm land, including pasture and unimproved land, plus the value of farm houses, buildings, and other structures.

#### Methods and Data Quality

The value of farm land per acre is estimated for each province by multiplying the previous year's estimate by the change ratios obtained from Farm Credit Canada's (FCC) survey of farm land values.

This FCC survey monitors bare land values in each province. Representative parcels of bare land are selected according to the most prevalent agricultural classes of soil in each Census district. Urban fringe areas are excluded from the sample. A weighting factor is then assigned to each of these properties, based on the improved land area from the most recent Census. Survey estimates are updated by FCC staff every six months, using the most recent comparable farm land sales.

This survey considers the value of the land, not the value of the buildings, which may introduce a bias into the indicators. In addition, the exclusion of urban fringe land may affect both the change in value and the level of the estimate, as urban fringe lands are more valuable, and also may be subject to more price volatility. Comparison to the 1996 Census of Agriculture indicates that the value of land and buildings was underestimated by nearly 5%. This was particularly noticeable in Prince Edward Island, New Brunswick and British Columbia, which were underestimated by 18%, 11% and 9% respectively.

## How to obtain more information
