Homebuilding dips in August

Metro Victoria homebuilders started only one-third as many new homes during August 2007 as during the previous August. Single and semi-detached houses saw the same level of activity as recorded last year, but multifamily starts (townhouses and apartment units) were one-tenth of what was recorded last August. Multifamily construction is volatile due the

large number of units starting at one time; therefore this dip is not indicative of a change in market conditions. Metro Victoria new homebuilding continues to be driven by ongoing strong demand in both the resale and new sectors of Victoria's housing industry.

Demand for new homes remains healthy although reduced from the frenetic level of the previous two years.

Factors behind healthy demand continue positive: unemployment continues near record lows, employment growth is tracking strong provincial increases, wages are rising, mortgage interest rates are relatively low and migration is trending up. Positive demand factors have been somewhat tempered this year by the uptrend in carrying costs for mortgages, due to rising interest rates and higher home prices. However, some homebuyers opt for longer amortization periods in order to offset higher prices and interest rates.

Despite August's dip in multifamily home starts, close to two-thirds of this year's homebuilding is of condominium tenure. Many 2007 homebuyers prefer the lifestyle advantages of a condo development, specifically less responsibility for exterior home maintenance and higher personal and property security afforded by condos. Additionally, many new condo developments are convenient to recreational or urban amenities.

With completion of some condo apartment projects during August, the number of new homes under construction in Metro Victoria edged down from its 31-year apex achieved in July. The complexity of many of the multifamily projects now under construction means these buildings take longer to complete therefore "under construction" volumes are expected to remain higher than the 10-year average for several more months.

Year-to-date sales (or absorptions) of newly completed homes are on par with last year's levels despite fewer new homes having completed construction in 2007. Total Metro Victoria inventories of newly completed and unsold homes remain low as most new homes are sold before completion. However, inventories of newly completed suites are slowly edging up as the proportion of apartment and townhouse condo presales is slightly less than reported last year. Of the 2,092 condo apartments now under construction, 62 per cent are reportedly pre-sold compared with a 65 per cent rate

of presales last fall. Pre-sales of townhouses follow a similar pattern while custom building of new single-detached homes is the norm.

Buyers shopping for a new house have a limited selection of completed houses to choose from as inventories of newly completed single-detached houses continue to decline. Overall, the market is balanced as most new houses are built to order for a specific buyer, ensuring supply keeps pace with demand.

Average new house prices rose 11.9 per cent during the first eight months of 2007, due to rising costs for land, construction labour and building materials. So far this year, North Saanich recorded the highest median new house price in the region, followed by Central Saanich (refer to Table 4). The only market with a median price below \$400,000 was Sooke. The variation in lot prices due to availability of land and amenities such as nearby golf courses or waterviews is the main reason for regional price differences.

Figure 2

The largest year-to-date increase in average new house prices occurred in Capital Regional District Area H, with a 38.8 per cent increase (refer to Table 4.1), followed by Langford with a 17.9 per cent increase. Prices are rising almost as rapidly as they did in 2006, although cost increases are being managed more tightly this year.

HOUSING NOW REPORT TABLES

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
