New Home Market

Weaker Housing Starts

Total housing starts have pulled back since the peak in 2005. New home construction continued to slow in the second quarter of 2006, declining by 11.2 per cent from the same period last year. Starts were weaker for both the single-detached and multiple-family segments, and both within and outside Peterborough City. Single-detached home starts declined 7.8 per cent, while the multiple-family home construction fell by 27.3 per cent compared to the second quarter of 2006.

Housing starts moved lower in all five submarkets of the Peterborough CMA. Construction activity, down by almost one third compared to the first half of last year, weakened at approximately the same pace in all the municipalities. Multiple-family construction remained nearly nonexistent outside the Peterborough

Canada

City, with weaker single-detached starts primarily responsible for pulling new home construction lower.

A number of factors drove new home construction lower. Weaker employment levels in the Peterborough CMA had a negative impact on home buying generally. Rising new home prices and limited spillover of demand from the existing home market into the new home market had a more direct negative impact on new home construction.

The average single-detached price rose by 14.2 per cent, to just over \$353,000, from the second quarter of 2006. Double digit price growth in recent quarters supported high price levels in the Peterborough CMA, with the average single-detached price moving for the first time above the \$300,000 mark a year ago. Rising land values and construction-related costs contributed to continued home price pressures.

Rising prices of new single-detached homes have shifted some of the focus to multiple-family homes. Although multiple-family construction slowed compared to a year ago, lower prices continued to bolster buyers' interest in this type of housing. Buyers preferring ground-oriented homes have largely opted for row-style housing (town homes) in recent years. In fact, following single-detached homes, town homes remain the most popular dwelling type built in the Peterborough CMA.

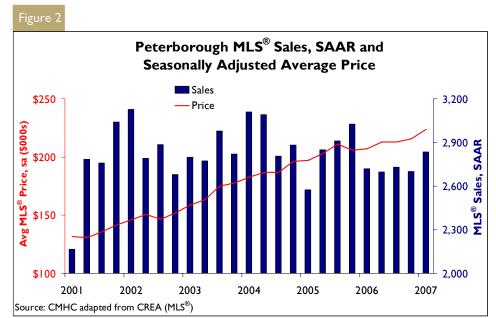

Resale Market Impressive Resale Levels

Peterborough's resale market recorded an impressive start to 2007. Second quarter results bolstered strong year to date sales, with sales up by 9.4 per cent compared to the second quarter in 2006. A total of 954 existing homes were sold during the second quarter in Peterborough.

Rising mortgage rates and rising resale prices pushed mortgage carrying costs higher. Average monthly carrying costs (assuming the posted fixed three-year mortgage rate, 25 per cent down payment and a 25-period amortization period) moved up by 9.3 per cent in the second quarter of 2007. However, despite the concurrent home price pressures, low mortgage rates continue to keep mortgage carrying costs relatively low.

A rising price differential between resale and new homes also contributed to impressive resale market performance. Lower prices relative to new homes upheld buyers' interest in resale homes. Compared to previous periods, and more importantly, compared to prices of new homes, a more modest price growth of resale homes was observed in the second quarter of 2007. Price appreciation pulled back from double digit growth recorded in recent years.

The Sales-to-New Listings Ratio (SNLR), a leading indicator of future price growth and the current market conditions, moved down to 55 per

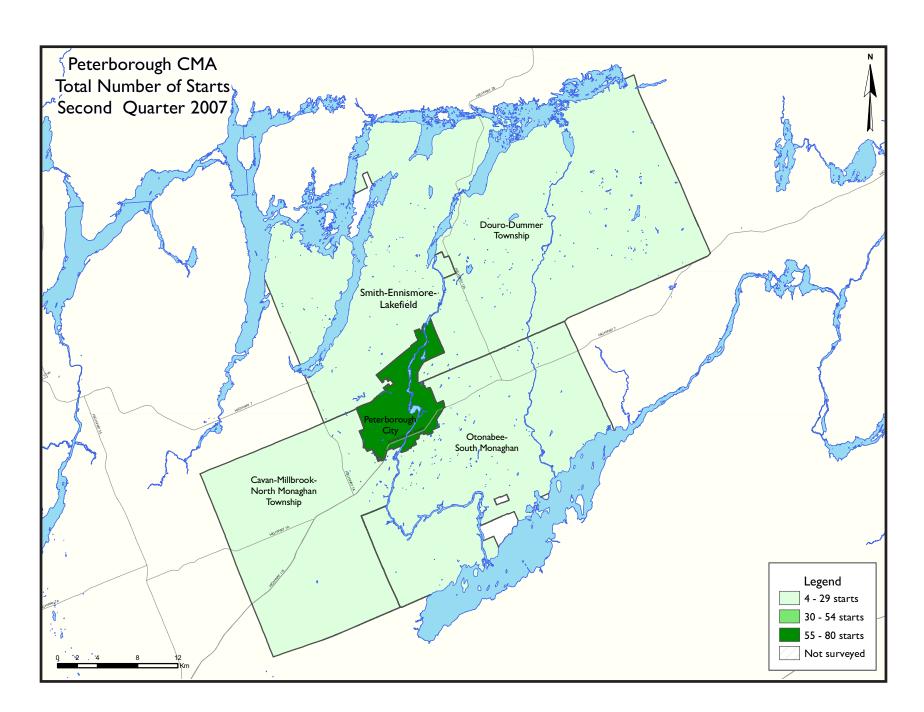

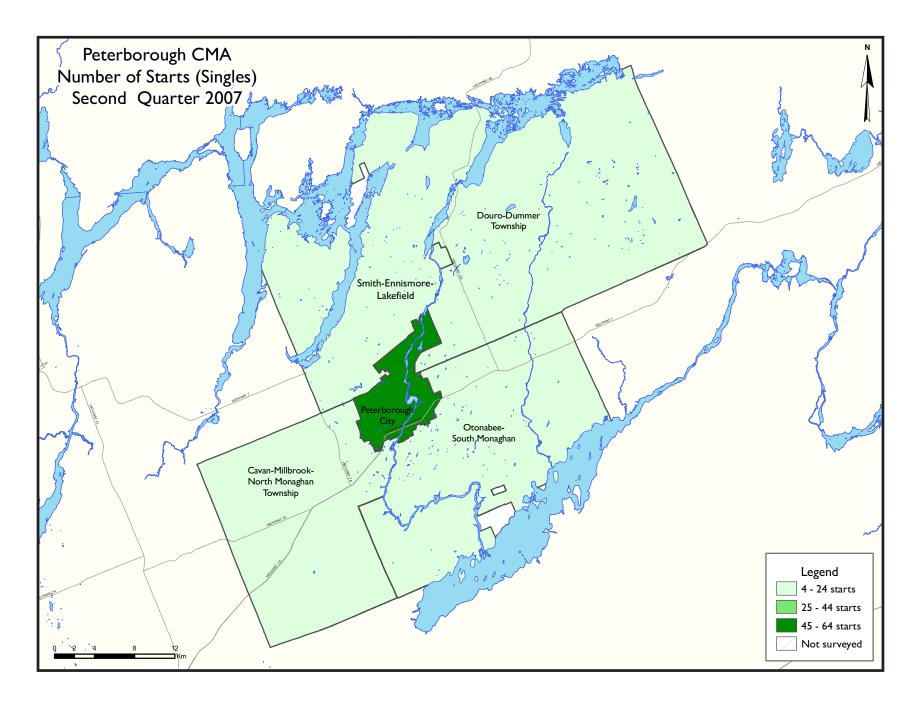

cent in 2006, suggesting that more balanced resale market conditions should prevail in Peterborough. However, strong second quarter sales pushed this ratio up to 61 per cent. A SNLR above 55 per cent is usually associated with prices growing faster than inflation, shorter listing periods and bidding wards. The average resale price rose by 4.4 per cent to \$227,954 in the second quarter of 2007.

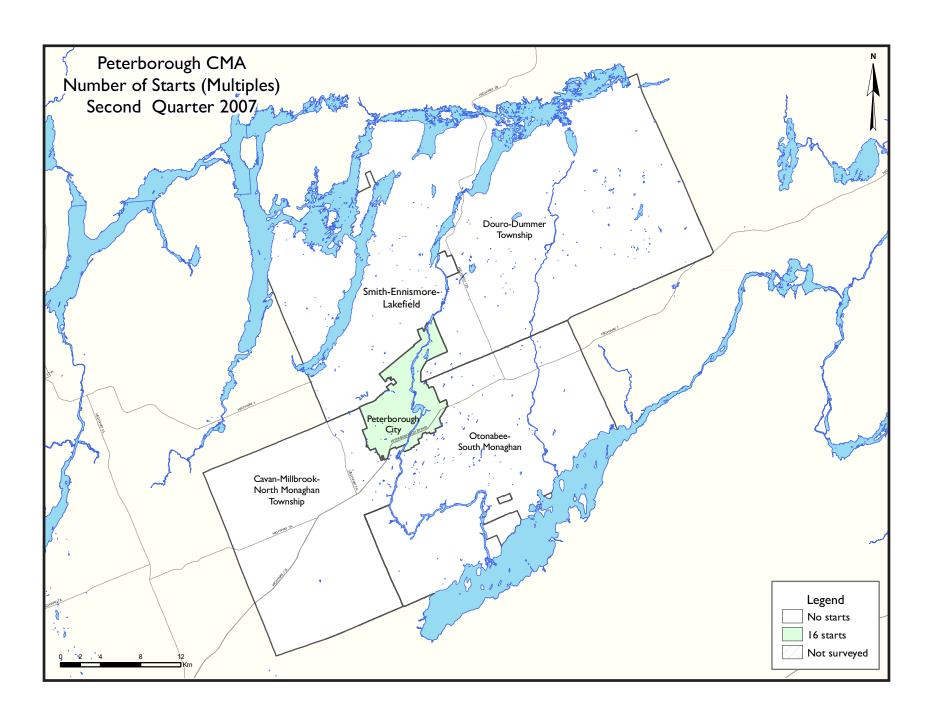

Local Economy

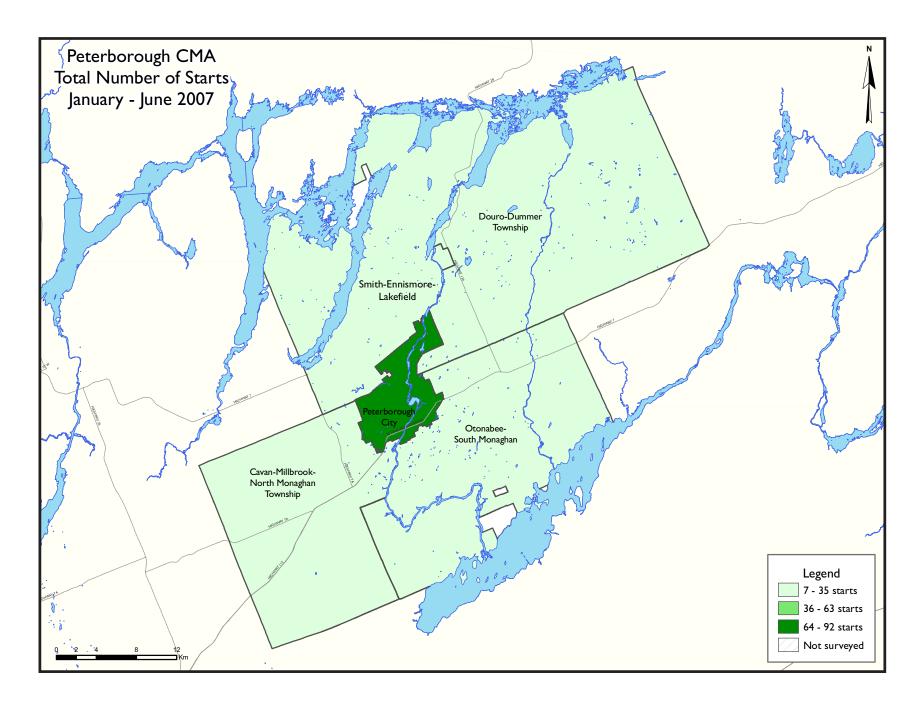

Migration Supporting Housing Demand

Although employment in the Peterborough CMA remains at high levels, growth has remained sluggish in recent years. In the second quarter of 2007, employment grew by only 0.5 per cent compared to a year ago. Slower job growth has negatively affected some household's ability to purchase a home. Peterborough's population grew by 5.1 per cent between 2001 and 2006, according to Statistic Canada's 2006 Census, faster than the growth during the previous five-year period. The increase was primarily due to positive in-migration to the Peterborough County. Although net migration slowed in 2004, net migration picked up again in 2005 by moving above the previous five-year average.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "**Single-Detached**" dwelling (also referred to as "**Single**") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "**Semi-Detached (Double)**" dwelling (also referred to as "**Semi**") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "**Row (Townhouse)**" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.
