Greater Sudbury CMA

Canada Mortgage and Housing Corporation

Date Released: Fourth Quarter 2007

New Home Market

Sudbury Third Quarter Starts Highest Since 1992

In the third quarter of 2008, the City of Greater Sudbury experienced the highest level of single-detached housing starts since 1992. Starts totaled 183 units in the third quarter, up 6.4 per cent from last year. Furthermore,

starts were 46 per cent ahead of the five-year average for third quarters.

Employment growth, strong consumer confidence and demand spilling over from a tight resale market provide strong backing for the new construction market in Greater Sudbury. Mining and the mining supply sector continue to generate jobs in the Greater Sudbury area. Strong enrolment in

three post secondary institutions coupled with strong levels of Industrial, Commercial and Institutional (ICI) construction in the community are also contributing to the buoyant market conditions.

Elsewhere in Northeastern Ontario, Timmins, Temiskaming Shores and Sault Ste. Marie are all experiencing stronger housing starts activity to September 30th. (See Table 2.5)

Table 4 presents analysis of absorption¹ activity in Sudbury, Sault Ste. Marie and North Bay. Once again, many Greater Sudbury singledetached absorptions were worth more than \$300,000. Forty per cent of all third quarter new units were absorbed in this range while 41 per cent were absorbed in the year-todate at the highest end of the market. (see Table 4) In fact, the average value of all absorptions in Greater Sudbury is up over \$300,000 in the year-todate. As was the case in the second quarter, the \$250,000 to \$299,999 and the \$200,000 to \$249,999 price ranges were the next most popular individual price ranges in the third quarter in Greater Sudbury. Monthly average absorbed prices are on average, well above \$200,000 in Sault Ste. Marie and North Bay. The Sault's average absorbed price has risen rapidly so far this year.

Resale Market

Sudbury Resale Prices on a Wild Ride

The existing home market in Greater Sudbury is persistently tight due to

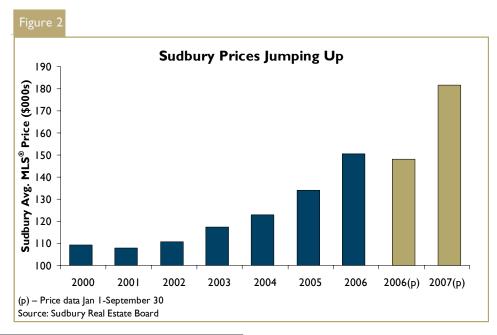

reasonably strong demand and a low level of listings. Conditions in the resale market in Greater Sudbury continue to favour sellers. Third quarter sales were higher than they have been for most of the past decade, but were lower than the third quarter of either 2006 or 2005. Sales reached 760, five per cent below last year's third quarter figure. Job growth, relatively low interest rates, solid income growth and a diversity of mortgage products which are reducing mortgage carrying costs are all contributing to strong demand for resale housing.

Geographic submarket analysis and price range analysis point to wide-spread market strength, However, sales of high-end units, especially in the south end of Greater Sudbury, continue to pull up the average price. In other words, there continues to be a disproportionate shift in activity to the high end of the market which has

caused the average price to rise so steeply.

New listings in the third quarter fell slightly from last year and continue to be well below levels during the 1990s. At 68%, Sudbury's sales-tonew-listings ratio is clearly signaling conditions in the existing home market favour sellers. Sudbury's ratio has been among the highest ratios in the province. Bidding wars are quite common in the market at present. Anecdotal evidence continues to suggest buyers are paying over list price on occasion. Resale home market prices have risen a remarkable 22.6 per cent year-over-year in the first nine months of 2007.

Not surprisingly, average mortgage carrying costs² have risen rapidly in Sudbury mainly due to the large jump in average home prices. The rapid rise in ownership carrying costs could start to have a negative

Absorption is the point at which a new housing unit is taken off the market, usually because it is sold or rented. Many dwellings are sold before they are built. They are absorbed at completion. Owner-built dwellings are also absorbed at completion.

² Based on the inflation-adjusted average MLS price, a ten per cent down payment, the posted fixed three-year mortgage rate, 25 year amortization, and average property taxes.

affect on affordability in the market place since average weekly earnings are rising a little faster than three per cent per year. However, given the strength of sales, it appears that average carrying costs are not yet at a critical stage.

Economy

Sudbury Employment Growing Strongly

There are, on average, over 3,000 more people employed in Greater Sudbury this year than there were last year. This relatively strong employment growth has been vital to the sustained strength of all aspects of the housing market. Whether it is the resale market, new construction market or rental market, all segments are being positively impacted by strong employment growth. Employment is up 4.2 per cent when comparing average employment in the first nine months of 2007 to the equivalent in 2006. (see Charts below).

Employment in the goods-producing sector has also increased in the last few years, although employment levels in this sector are hovering just above where they were in 1996. It is expected new mine development in Greater Sudbury will continue to brighten the goods-producing employment picture. Furthermore, retirements at both CVRD Inco and Xstrata will trigger a new wave of hiring to replace the outgoing workers. Anecdotally, mines in more rural areas of Northern Ontario are having difficulty recruiting miners. Sudbury, on the other hand, due to its variety of amenities and services,

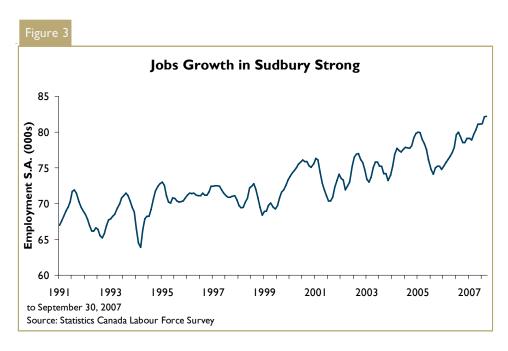

is successfully attracting people willing to work in the mines.

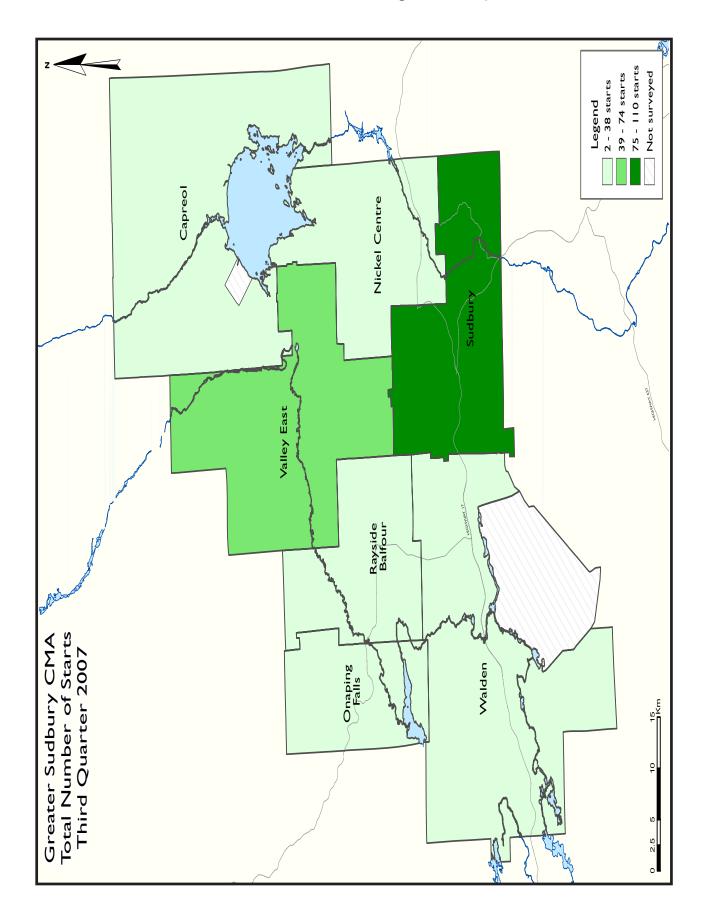

Nickel prices, at between \$13 and \$14 per pound, are below early-year highs but are still very healthy. Both CVRD-Inco and Xstrata are planning further significant investments in their operations in Greater Sudbury. FNX Mining of Sudbury controls several projects in what is commonly known as the Sudbury basin, just north of the city, and is currently staffing up. The re-start of the Sudbury Regional Hospital project is contributing favourably to the local economy. The new hospital and the presence of the Northern Ontario Medical School's Laurentian campus are contributing to optimism that the health care sector may begin to create a new engine in the Greater Sudbury economy. Labour shortages and strong demand are beginning to drive up construction costs. This is reflected in an increasing Statistics Canada New House Price Index for

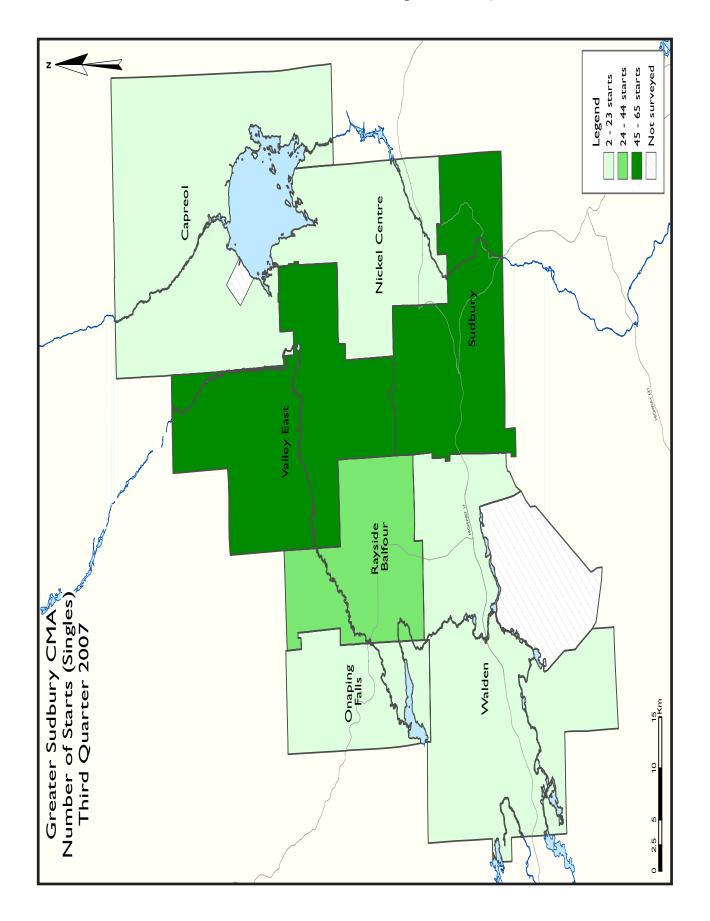

Sudbury-Thunder Bay (see Table 6). The index has risen 3.7 per cent to the end of July whereas annual price changes have been no more than two per cent going back to at least 1990.

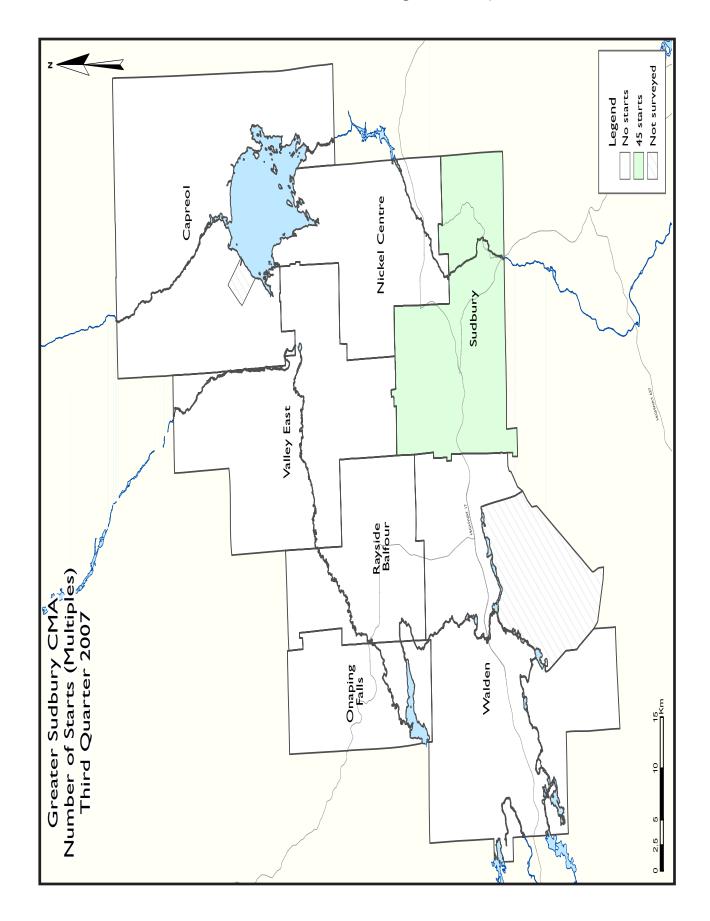

Sudbury Net Migration Turns Strongly Positive

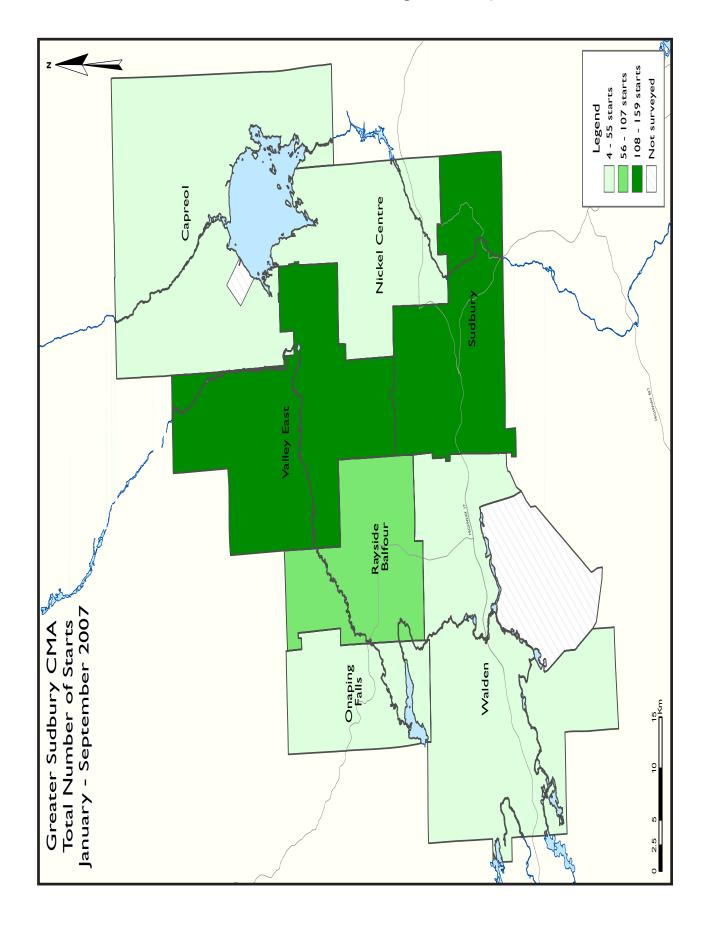

For the fourth consecutive year, migration numbers for Greater Sudbury were positive according to Statistics Canada. The 2005-06 numbers at 836 in-migrants were the strongest of the four and equal to the combined total of the 2003-04 and 2004-05 figures. This recent wave of in-migration reflects the positive economic environment. The declining population has started to grow again. As the population ages, net natural increase is teetering on zero with deaths equaling births in recent years, so positive inmigration is key to keeping the population stable.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/housingmarketinformation
