HOUSING NOW

Windsor

Date Released: Second Quarter 2007

New Home Market

Weakness Continues in First Quarter

The weak performance in new home construction in the Windsor Census Metropolitan Area (CMA) seen in 2006 continued into the New Year. Poor consumer confidence, weak job creation and an oversupply of resale housing contributed to the slowdown. Total starts dropped 66 per cent in the first quarter of 2007

to 108 units. Single-detached home starts plummeted by 74 per cent while multiple starts fell by 56 per cent.

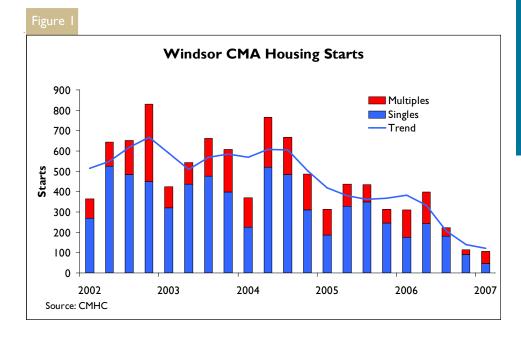

Single-detached starts moved lower in all five municipalities of the CMA, most significantly in the City of Windsor. LaSalle, where single-detached starts declined the least, faired better than other submarkets. The number of homes completed and sold was down by almost two thirds in the first quarter of 2007

compared to the year before while the supply of homes completed and not yet sold reached 54 units, nearly eight times higher than 2006 first quarter figures.

The average price of homes completed and sold continued to climb in the first quarter of 2007. The average price increased nearly \$35,000 to \$290,423 in the January-March 2007 period compared to the same period in 2006. LaSalle and Amherstburg, traditional locations for larger move-up family homes, had the largest increases. New homes in the Windsor CMA are nearly twice as expensive as the average resale home price.

Significant declines in the share of sales by price range occurred in homes completed and sold in the under \$200,000 price range while those in the \$200,000 - \$249,999 increased. The share of homes priced above \$350,000 has increased from 16.1 per cent in the first quarter 2006 to more than one quarter or 26.3 per cent of homes completed and sold in the first quarter of 2007.

Resale Market

Demand for Homeownership Slows

The decline in Windsor-Essex MLS home sales was more modest than the new home market in the first quarter of 2007. The 1,093 sales were off five per cent from first quarter 2006 sales.

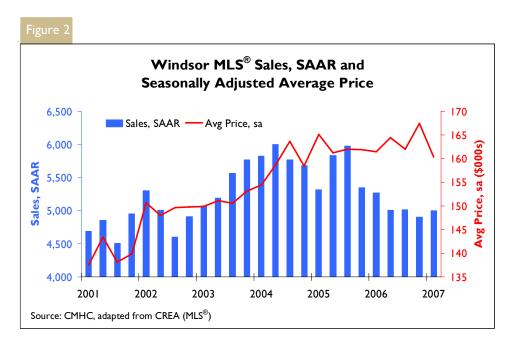

The slower pace of homes sales can be attributed to job losses and lower

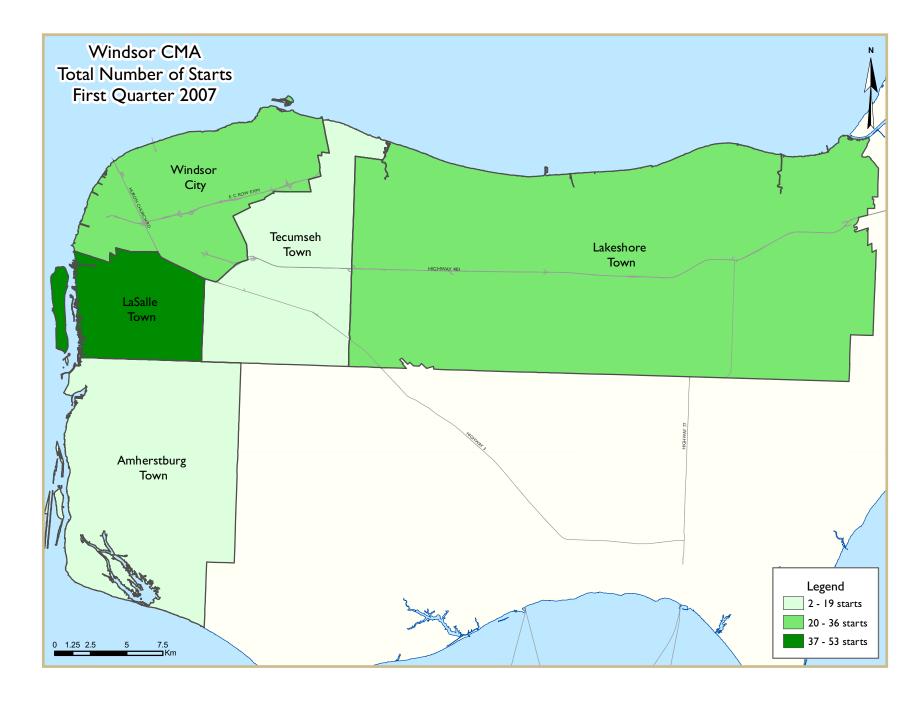

levels of immigration. The employed labour force dropped over four per cent or more than 7,000 jobs March over March. This led to an increase in the unemployment rate to 9.7 per cent in March 2007, second highest in the country. In turn this has negatively affected local consumer confidence.

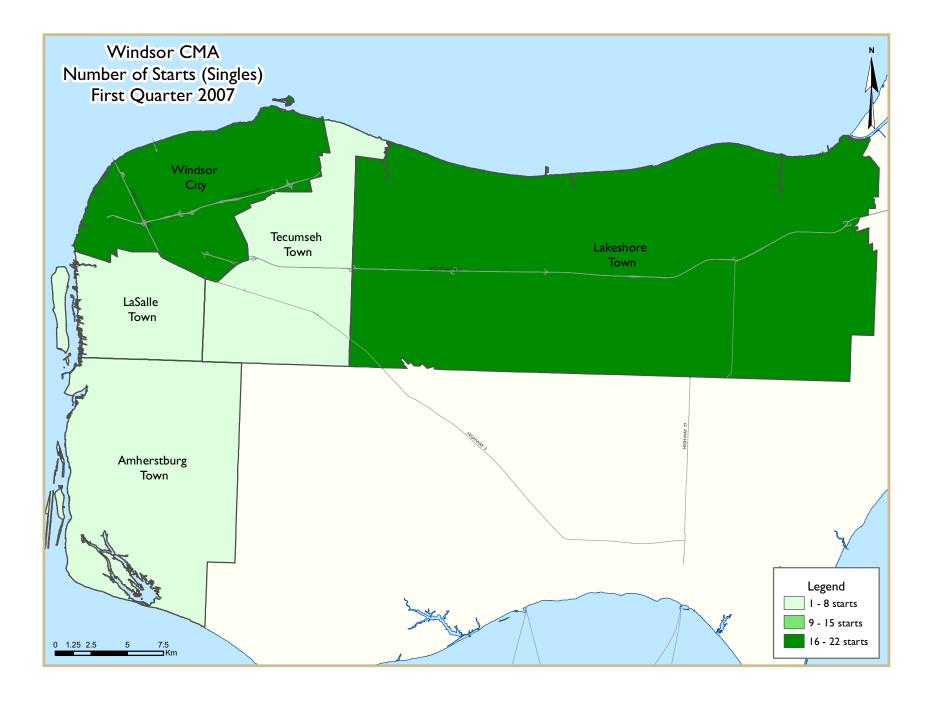

Homeownership became more expensive in the first quarter. The cost of carrying a \$100,000 mortgage, (principal and interest payment assuming the posted fixed five-year mortgage rate and a 25-year amortization period), was virtually unchanged compared to one year earlier. In March 2007 the cost was \$669 versus \$667 in March 2006.

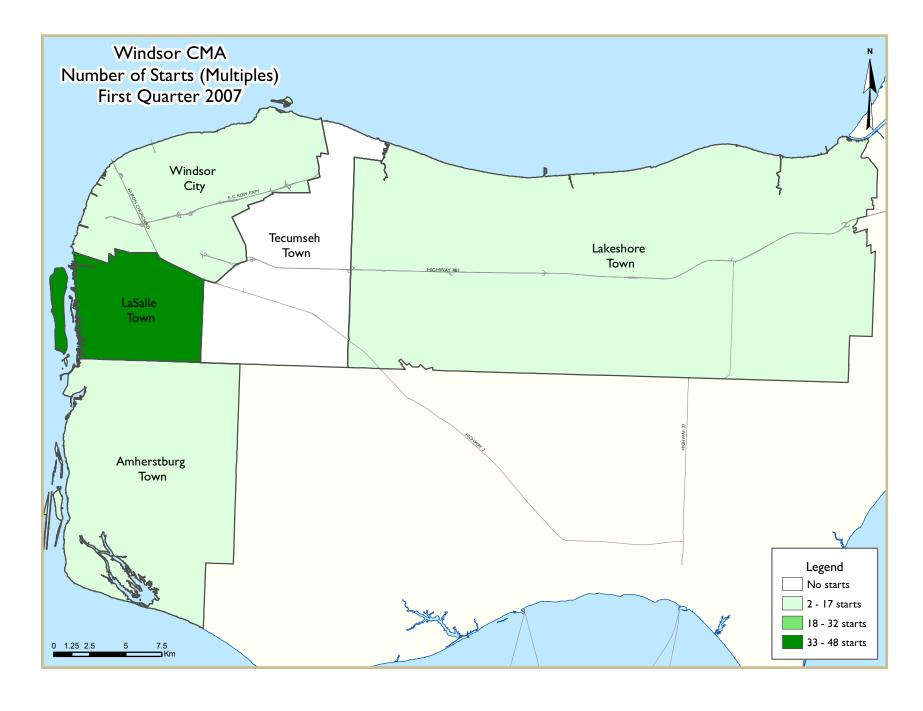

The average of resale home prices came in at \$156,759 in the first quarter, down less than one per cent from 2006. Stronger price increases over the past several years have encouraged homeowners to realize equity gains by listing and selling their homes, resulting in a surge of new listings. New listings in the first quarter finally started to plateau with 3,046 new homes listed compared to 3,084 homes in the first quarter of 2006.

The sales-to-listings ratio, a measure of market state, remains below the 40 per cent boundary associated with a balanced market. The buyer now has more of an advantage in price negotiations and properties are taking longer to sell.

HOUSING NOW REPORT TABLES

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.

For more information, visit our website at http://www.cmhc.ca/

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for **free** on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to http://www.cmhc.ca/housingmarketinformation
