

## HOUSING NOW

## Edmonton CMA

Canada Mortgage and Housing Corporation

Date Released: August 2007

## New Home Market

### Edmonton's Housing Starts Lower In July

For the third month in a row, total housing starts in Greater Edmonton declined on a year-over-year basis in July. Housing starts across the Edmonton Census Metropolitan Area (CMA) fell by 13 per cent from July 2006 to 1,241 units. On a year-to-date basis, total housing starts are largely unchanged from the number of homes started in the first seven

months of 2006.

Following a record performance in the month of June, single-detached starts across the region fell by 19 per cent year-over-year in July. Builders started work on 682 units compared with 845 in July 2006. However, last year's July single-detached numbers were the best on record for that

Figure 2

month. Improvements in the suburban areas were erased by a 39 per cent drop in single starts within Edmonton City. For the year-to-date, single-detached starts across Metro have fallen by 8.5 per cent from last year's record-setting pace. Considering the recent surge in resale listings, higher mortgage rates this year combined with escalating new house prices, CMHC anticipates further weakness in single-detached starts in the months ahead.

Single-detached completions in July reached 652 units, largely unchanged from July 2006. Meanwhile, there were 618 singles absorbed across the region, representing a slight decline from last July. With completions outpacing absorptions by 34 units, the inventory of completed and unoccupied singles rose from 435 units in June to 469 units in July. Compared with this time last year, July's inventory including show homes was down by less than two per cent. Single-detached units under construction, however, remain at a record high level. Inventories should rise in the months ahead as builders contend with rising

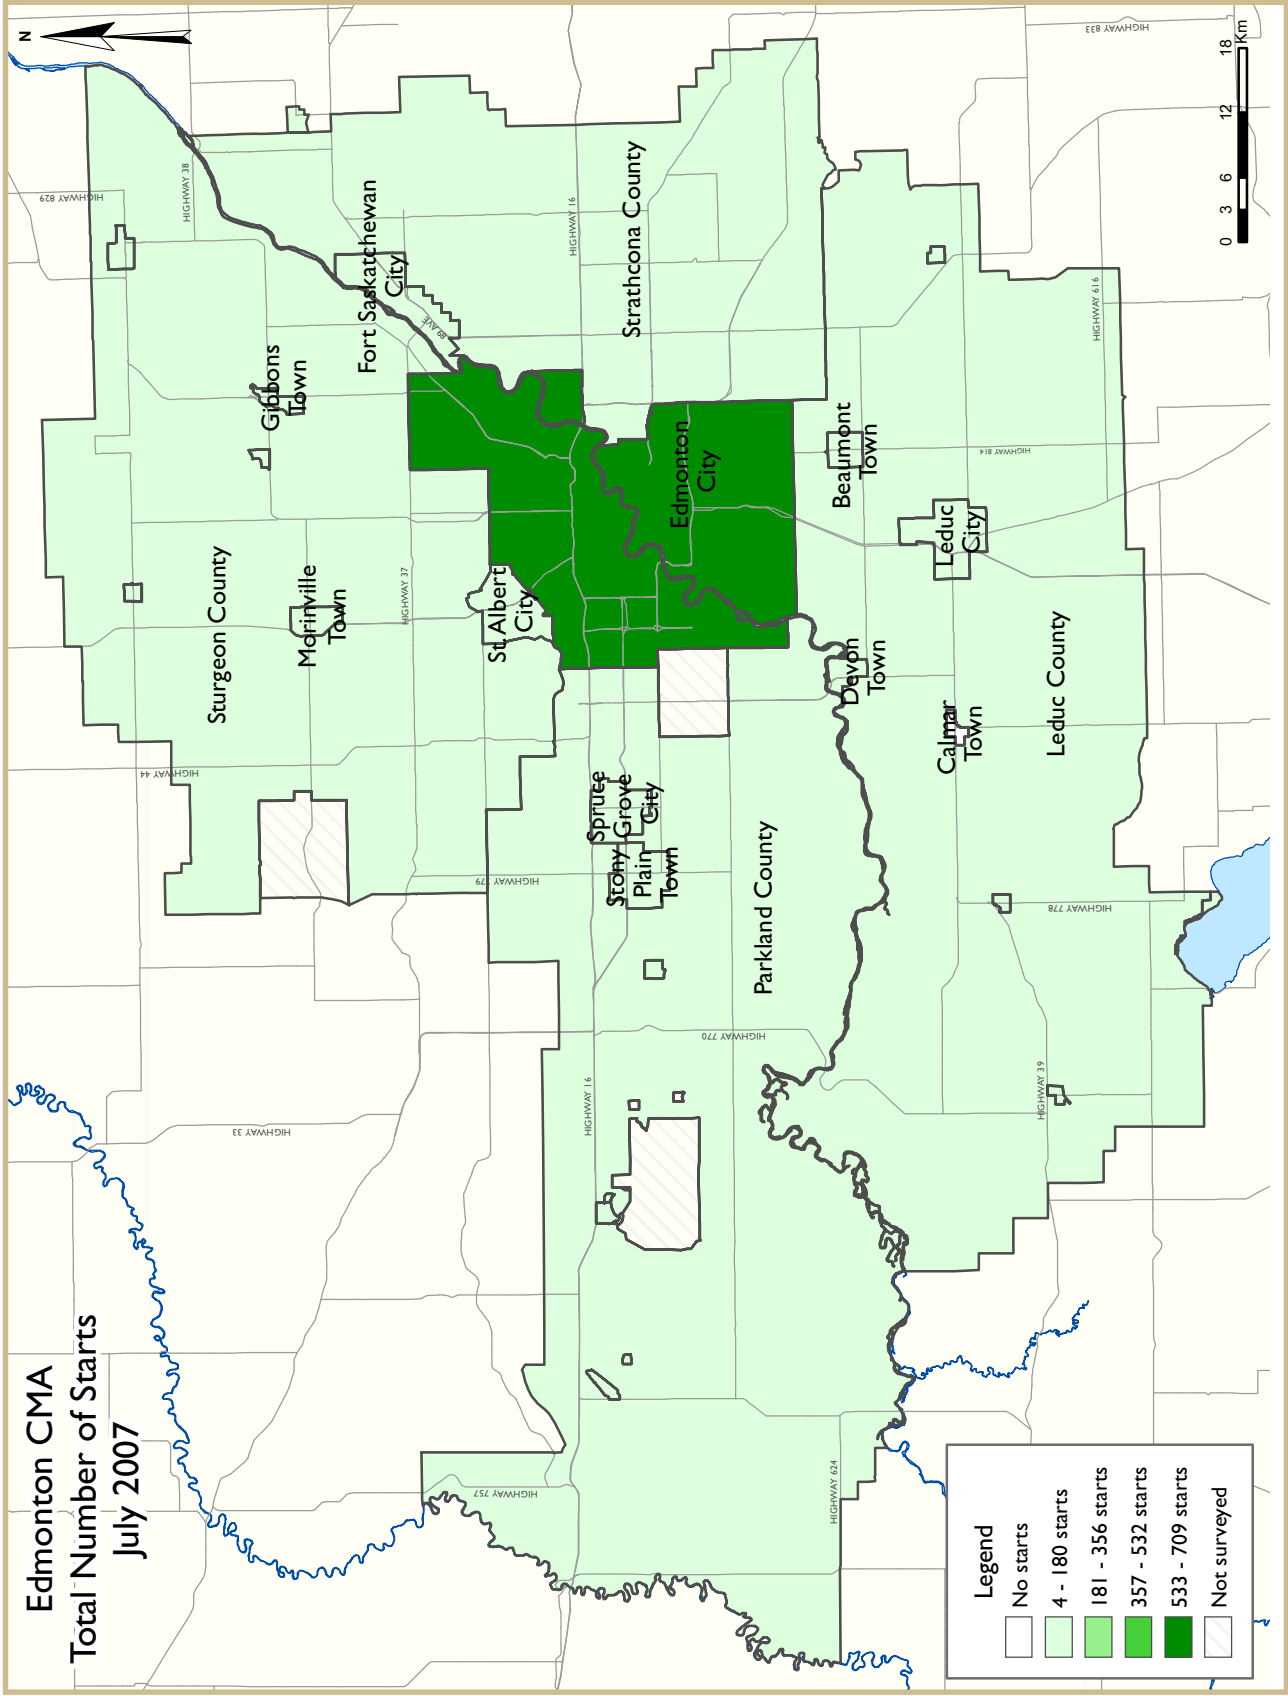

completion levels amid a resale market which has seen a big upsurge in active listings since May.

Single-detached homes absorbed in July for record-high average price of \$466,183, representing a 53 per cent increase from the same month last year. This absorbed average price reflects the price of homes that were completed and absorbed in July 2007 but in many cases negotiated and priced before construction began. So far this year, the new house absorbed average price has risen by 42 per cent.

Multiple dwelling starts also declined from last July's levels, falling 3.5 per cent year-over-year to 559 units. A strong upswing in semi-detached starts was countered by a combined 22 per cent fall in row and apartment activity. All of the 310 apartment units started in July were found within the city of Edmonton, including an 80 unit rental structure located in the city's southwest. Despite lower year-over-year production in the past three months, year-to-date multi-unit starts remain 14 per cent ahead of activity

reported in the first seven months of 2006.

Multiple unit completions totalled 304 units in July, down 21 per cent year-over-year from the 384 multi-unit completions reported in July 2006. Absorptions in July outpaced completions by 55 units, causing inventories to fall from 224 units in June to 169 units. Current inventories are down by 78 per cent from the 752 units that were on-hand in July 2006, but are expected to rise in the months ahead. Multiple dwellings under construction stood at 8,332 units in July, representing a 17 per cent increase over the same time last year. Meanwhile, resale condo inventories have risen rapidly across Metro in the past three months and this will provide some added competition for new condo developers.

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that Canada maintains one of the best housing systems in the world. We are committed to helping Canadians access a wide choice of quality, affordable homes, while making vibrant, healthy communities and cities a reality across the country.

For more information, visit our website at <http://www.cmhc.ca/>

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for **free** on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to <http://www.cmhc.ca/housingmarketinformation>

For more information on MAC and the wealth of housing market information available to you, visit us today at <http://www.cmhc.ca/housingmarketinformation>
