Multiple Units Lift Housing Starts in August

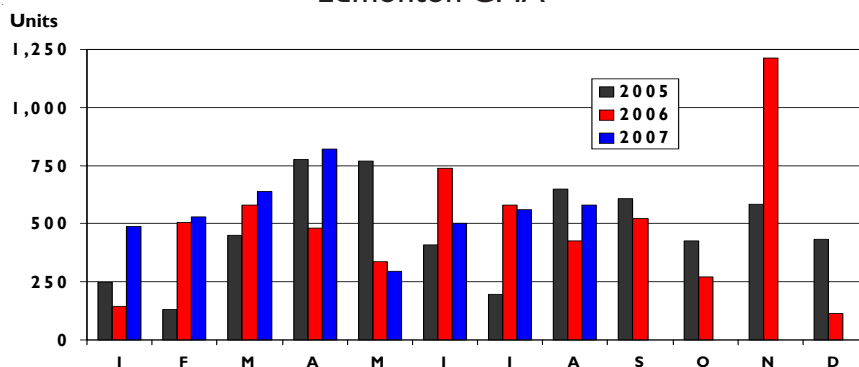

An upsurge in row and apartment starts within the city of Edmonton helped bolster new housing activity across the region in August. Housing starts within the Edmonton Census Metropolitan Area (CMA) increased by 5.7 per cent from August 2006 to 1,278 units. On a year-to-date basis,

new home starts have exceeded last year's pace to the end of August by almost one per cent.

Despite a 26 per cent decline year-over-year in semi-detached starts, total multiple unit starts improved by 37 per cent over August of 2006. Row and apartment starts were more than double the number reported in August of last year and this more than compensated for the pull back in semis. All of the 413 row and apartment starts tallied across

Figure 2

Metro occurred within the city of Edmonton. On a year-to-date basis, total multiple dwelling starts in the CMA were 17 per cent ahead of last year's production to the end of August.

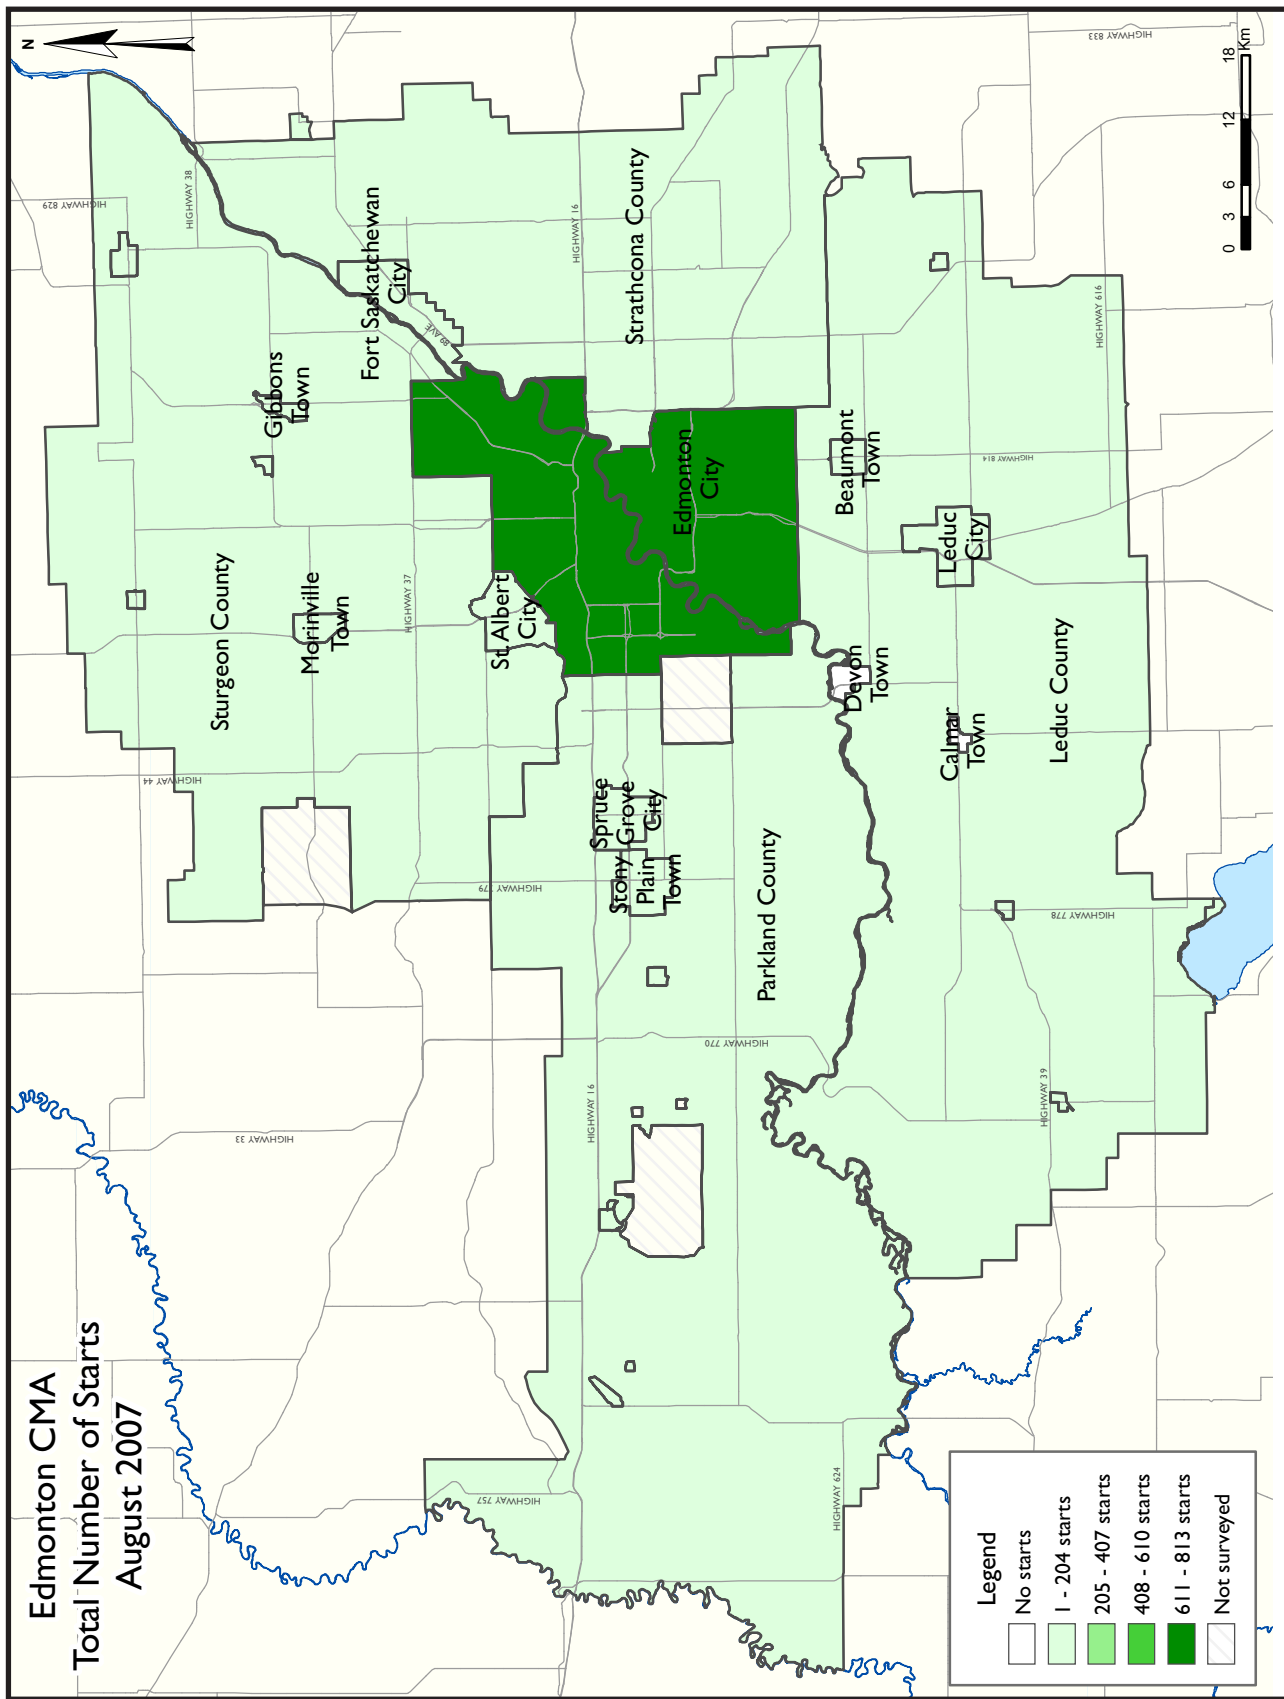

Multiple dwelling completions dropped to 217 units in August compared with 311 units in August 2006. Nonetheless, completions exceeded absorptions by 19 units and this provided a modest up-tick in the inventory of completed and unoccupied units. Despite these additions, inventories were down from last August by a wide margin. However, with units under construction up by 20 per cent from this time last year, some inventory replenishment should occur in the fourth quarter as completions ramp up. Condo resale inventories are substantially higher this summer, compared with this time last year, and developers will have to contend with the added competition from these existing units as well.

Following a 19 per cent year-over-year decline in July, single-detached housing starts fell by 11 per cent in August from the same month last year to 697 units. As was the case in July, improvements in the suburban areas were undermined by a substantial year-over-year drop within Edmonton City. So far this year, Edmonton's share of the single-detached starts Metro-wide has dropped to 49 per cent compared with a 61 per cent share of starts across the CMA during the same eight month period in 2006.

Compared with last year's record setting pace, single-detached starts across the region have declined in seven of the past eight months in 2007. CMHC expects to see a continued slowdown in single starts relative to last year as prospective buyers react to surging new house prices and an improved inventory of resale homes available in the Edmonton area.

Single-detached completions increased by 17 per cent year-over-year in August to 636 units. However, with August starts outpacing completions, the number of units under construction continued to climb to yet another new record. While absorptions in August also increased over the same month last year, they failed to keep pace with completions by 62 units. As a result, the unabsorbed inventories reported in July moved upward in August to 527 units. August's inventory represented a 3.5 per cent increase from the same month last year and also the first year-over-year increase in inventory (including show homes) since September 2005. The number of completed and unoccupied units should rise in the months ahead considering the large volume of units under construction and the substantial increase in resale inventory now on the market.

Single-detached homes absorbed in August for an average price of \$469,745, representing a 47 per cent increase from the same month last year and another record high. This absorbed average price reflects the price of homes that were completed and absorbed in August 2007 but in many cases negotiated and priced before construction began. For the year-to-date, the new house absorbed average price has risen by 43 per cent to an average of \$418,954.

HOUSING NOW REPORT TABLES

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
