Canada Mortgage and Housing Corporation

Date Released: Fourth Quarter 2007

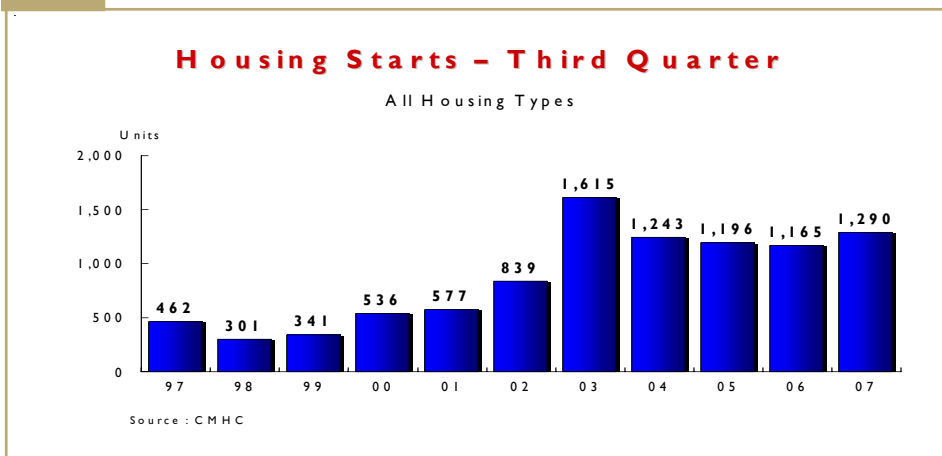

## Residential Construction Increases for a Second Straight Quarter

In the Québec census metropolitan area (CMA), residential construction was strong in the third quarter of 2007. According to Canada Mortgage and Housing Corporation (CMHC), there were 1,290 housing starts in the third quarter of 2007, compared to 1,165 during the same quarter last year. This 10-per-cent gain followed an increase of 17 per cent in the

previous quarter. These two hikes came after eight quarterly decreases in activity.

The rental housing segment mainly accounted for the increase observed in the third quarter. In fact, construction got under way on 469 rental dwellings from July to September, compared to 211 during the corresponding period in 2006. Among the projects that were started, only four had more than 20 units, with the largest comprising 64 units. Contrary to the previous

quarter, the increase in rental housing production was not attributable to the start of construction on large retirement homes. Activity was rather supported by the low percentage of unoccupied rental housing units.

The freehold home segment<sup>1</sup> also contributed to the increase in total starts, as production rose from 658 units in the third quarter of 2006 to 706 units during the same period this year. Single-detached houses and row homes were the two housing types that posted gains.

Condominium starts, for their part, have been steadily declining. In

addition, the decrease registered in the third quarter (-61 per cent) was the most significant drop recorded since the beginning of the year. In all, 115 condominiums were started during the months of July, August and September.

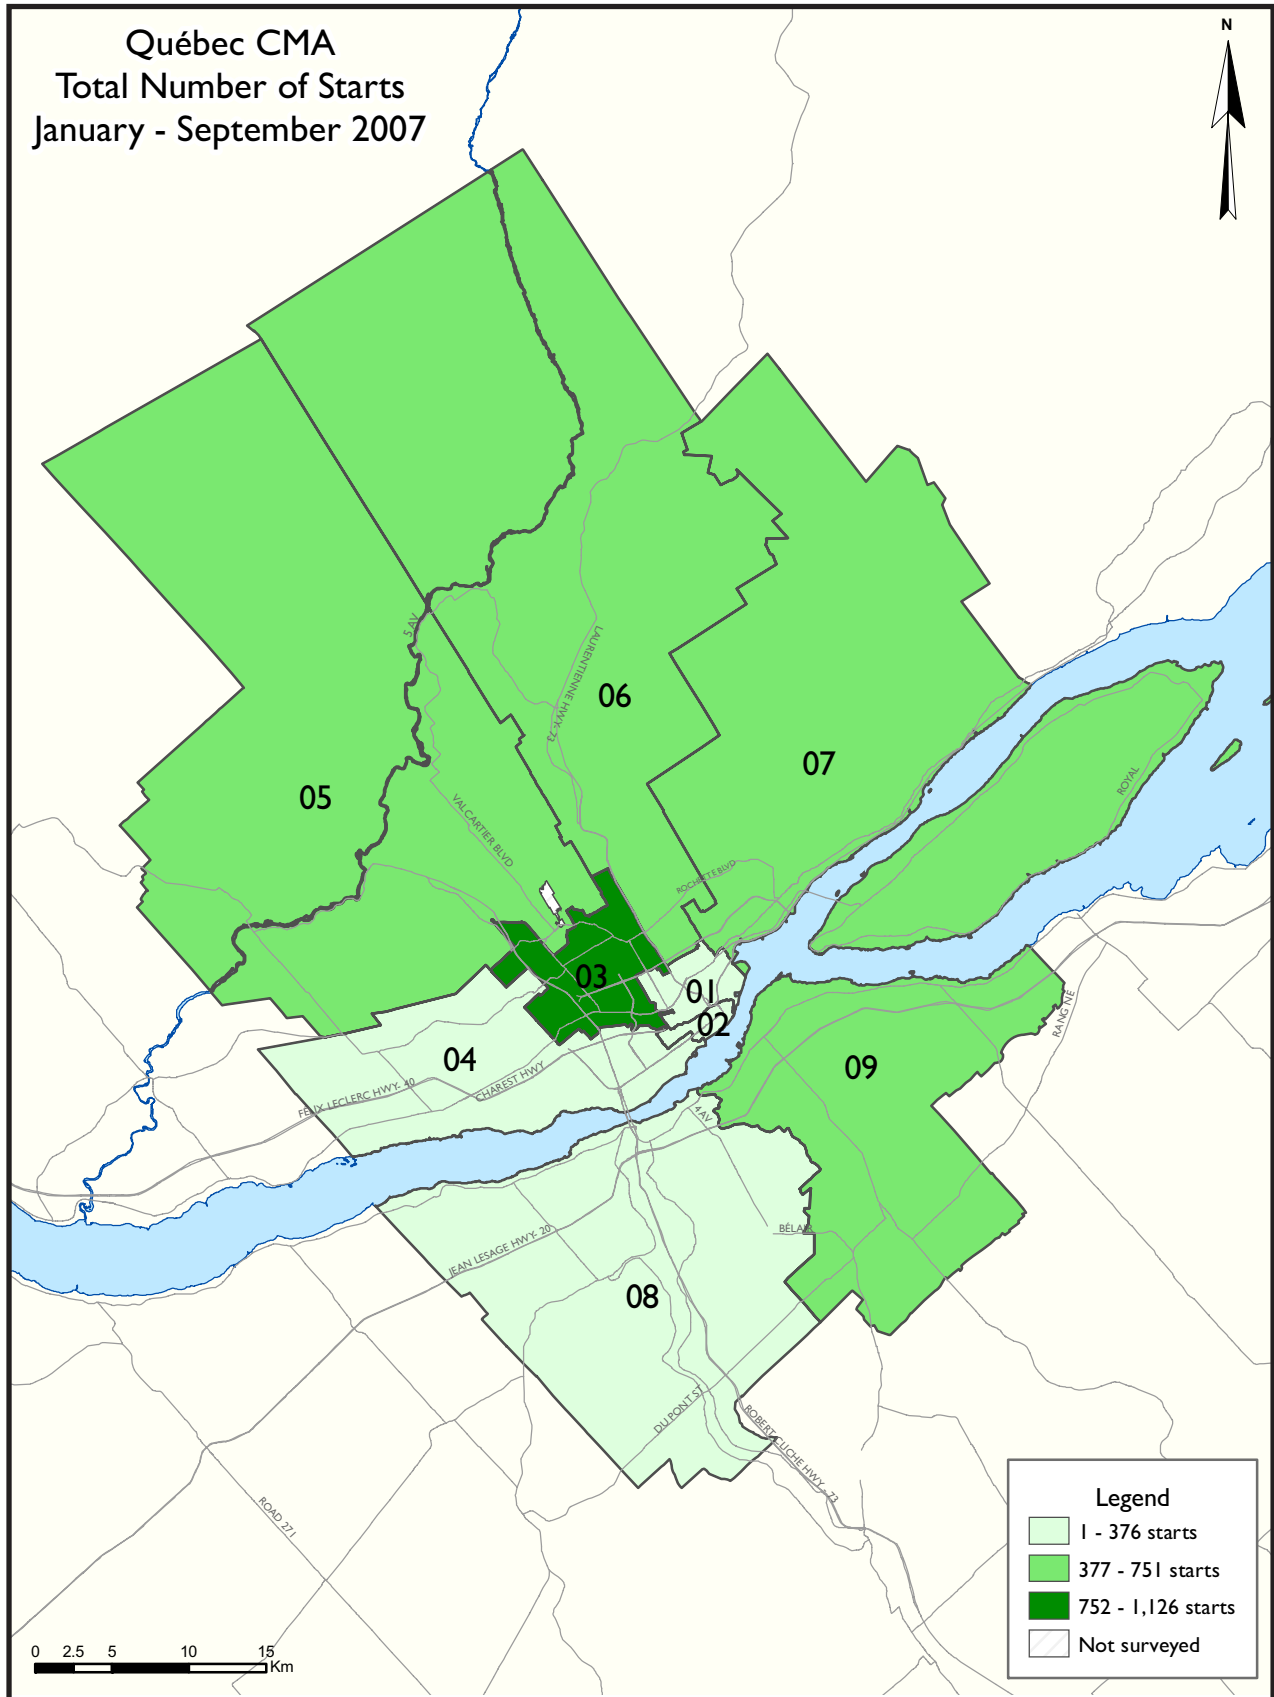

### **Housing starts up slightly for the first nine months of the year**

Since the beginning of the year, 4,000 dwellings have been started in the Québec CMA, compared to 3,951 during the first three quarters

of 2006, for a gain of 1 per cent. On a year-to-date basis, only rental housing construction is up (+45 per cent), while freehold home building and condominium production are down by 3 per cent and 40 per cent, respectively.

Across Quebec, all CMAs, with the exception of Sherbrooke, show increases in starts for the first nine months of the year. In Gatineau, the gain is 29 per cent, while activity is up by 61 per cent in Saguenay, by 2 per cent in Trois-Rivières and by 17 per cent in Montréal. In the Sherbrooke CMA, starts are down by 13 per cent.

<sup>1</sup> Freehold homes refer to dwellings where the owner also holds the title of ownership to the land (single-detached, semi-detached and row houses, as well as duplexes).

<b>ZONE DESCRIPTIONS - QUEBEC CMA</b>		
<b>Zones</b>	<b>Municipalities and Zones</b>	<b>Large Zones</b>

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
