

HOUSING MARKET OUTLOOK

Windsor CMA

Canada Mortgage and Housing Corporation

Date Released: Fall 2007

New Home Market

Housing Starts to Fall

In 2008 new home construction in the Windsor Census Metropolitan Area (CMA) will drop to the lowest level since 1984. Total home starts will fall to 510 units, down eight per cent from 2007. Demand for all dwelling types will be weaker. Construction will begin on a total of 360

single-detached homes in 2008, a drop of seven per cent from 2007. Rising new home prices, minimal employment growth, and greater choice in the resale home market will combine to weaken demand for new homes further in 2008.

The average price of a new home in the Windsor CMA will continue to be well above the cost of the average

resale home. As a result of higher land and infrastructure costs, the average price of a newly constructed single-detached house in the Windsor CMA has risen by more than 20 per cent in the last two years. Price increases for single-detached homes have outpaced income gains. Declining affordability has cut into demand for single-detached homes. With prices forecast to increase above the general rate of inflation in 2008, affordability will continue to be a factor for many potential buyers. However, the top end of the market (above \$300,000) will still be active.

The 2006 Census shows the proportion of households in the Windsor CMA that own their dwelling as opposed to renting is significantly higher than the Ontario average. In 2006, 75.7 per cent of households owned their own dwelling in the Windsor CMA compared to an Ontario average of 71 per cent. One of the contributing factors to the higher homeownership rate in the Windsor area is the relatively lower housing costs compared to other larger metropolitan centres in Ontario. The strong movement from rental into homeownership over the past several years is expected to wane as increases in carrying costs outpace average rental increases in 2008.

As mortgage carrying costs increase, some home buyers will turn to more affordable types of new construction, or to resale homes. Rental construction will be minimal since the rental apartment vacancy rate in Windsor is the highest in the country. Condominium starts are also likely to be limited. In August 2007, there were 183 apartment condominium units under construction at 3 different locations,

approximately 60 per cent of which are presold. This will provide sufficient supply for the next 18-24 months.

Resale Home Market

Resale to Cool in 2008

The resale home market in Windsor-Essex, which peaked in 2005, will continue to slow in 2008. Sales through the Windsor-Essex Real Estate Board will soften a further five per cent to 4,700 units. Low mortgage rates and an increased variety of financing options will keep the resale market from falling further.

New listings, a measure of supply, will remain high. A nearly 12,000 homes will be listed for sale in 2007, up one per cent from 2006. The supply of new listings has been moving higher since 2000. Many homeowners have

been encouraged to put their homes up for sale in a housing market environment which has seen house prices rise more than 18 per cent in the last five years. This is particularly true for two storey homes where prices have risen more than 11 per cent in the third quarter over the same period one year earlier.

Market tightness is measured by the sales to new listings ratio (SNLR). In a buyers' market, prices are falling while in a balanced market, they are rising in line with inflation. In Windsor-Essex a buyers' market is associated with a SNLR below 45 per cent, while a ratio between 45 and 55 per cent indicates a balanced market. The SNLR has been trending lower after peaking in 2002. With supply outpacing demand in 2007, the SNLR has averaged less than 44 per cent. The Windsor-Essex resale market is expected to favour buyers into 2008. As a result of the loosening of the market in the last few

Figure 2

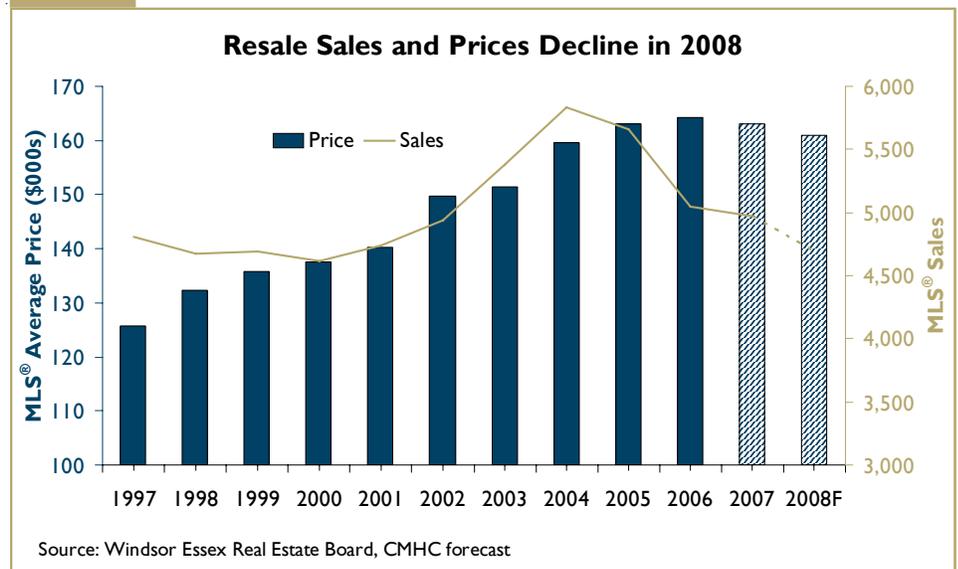

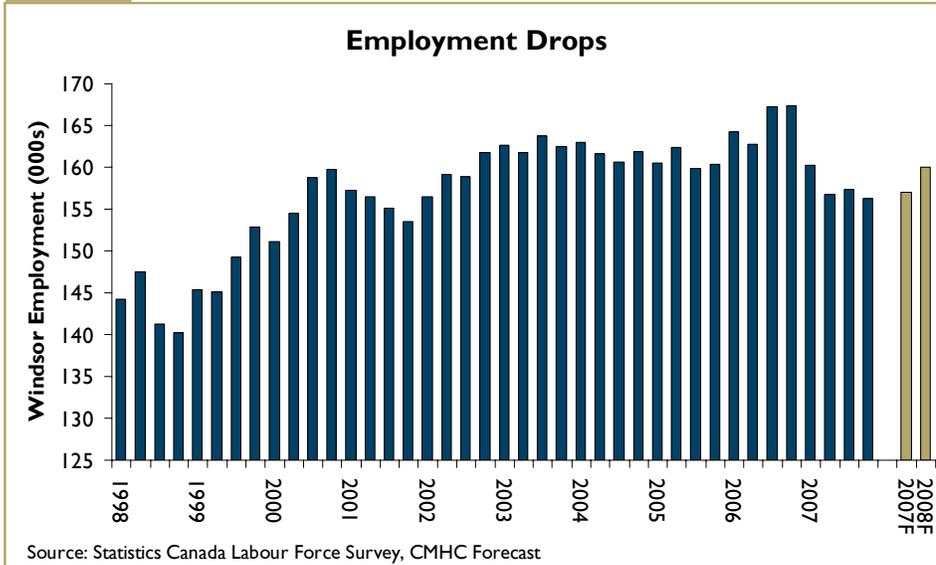

Figure 3

years, the average sale price will decline. The average price of a resale home is expected to nudge lower to \$163,000 in 2007 and a further one per cent in 2008.

Economic Trends

Slower Job Growth

Employment is a key factor supporting housing demand. In 2007 employment in the Windsor CMA is forecast to decline by five per cent but rising non-residential investment will stimulate a recovery of two per cent to 160,000 in 2008. This falls shy of the job losses in 1991 when employment levels declined 5.7 per cent and three years elapsed before those jobs. Weaker economic growth in the U.S. and the high Canadian dollar have negatively impacted export sales. Most of the loss will be in the goods-producing sector due to manufacturing job losses from the ongoing restructuring in the auto sector. More lay-offs in this sector are pending and having a negative effect on consumer confidence. The tourism sector has also been negatively affected by border crossing difficulties,

the smoking ban, and competition from the new MGM Grand Casino in Detroit.

On a positive note, non-residential construction will be boosted by the ongoing casino renovation, the new arena, and a proposed \$160 million power generation plant. Recently, the Windsor area was ranked as North America's leading small City of the Future. Part of the ranking was based on several large-scale projects, one of which will be the new \$1 billion international border crossing facility.

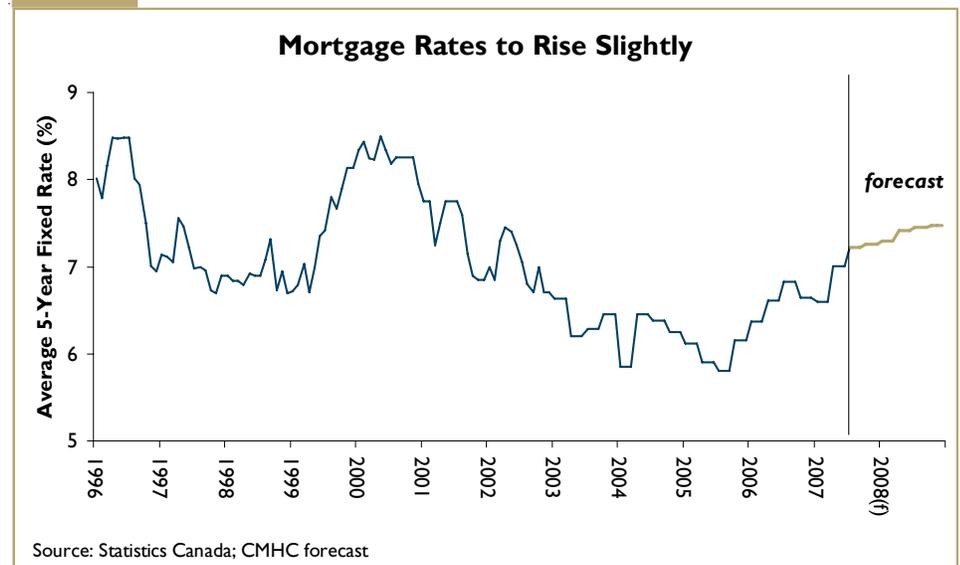

Also in the works for 2008 are the University of Windsor's \$110 million Centre of Engineering Innovations and new facilities and renovations at the Windsor Regional Hospital.

Full-time employment is important to housing demand. This sector has seen a decline in employment in the last year. The number of full time jobs bottomed out in the first quarter of 2007 and has slowly been improving. However there will still be 6,300 fewer full-time jobs than last year. Although Windsor's unemployment rate is the highest in the country, it is much less than the 13-14 per cent range seen in the early 1980s.

Mortgage Interest Rates

Mortgage rates are expected to remain flat through the end of 2007. While still low by historical norms, mortgage rates are expected to rise gradually by 25-50 basis points in 2008. The one year posted mortgage rate is forecast to be in the 6.50-7.50 per cent range, while three and five year posted mortgage rates are forecast to be in the 6.75-7.75 per cent range in 2008.
