

# RENTAL MARKET REPORT

## Ontario Highlights\*

Canada Mortgage and Housing Corporation

Release Date: Fall 2007

Figure 1

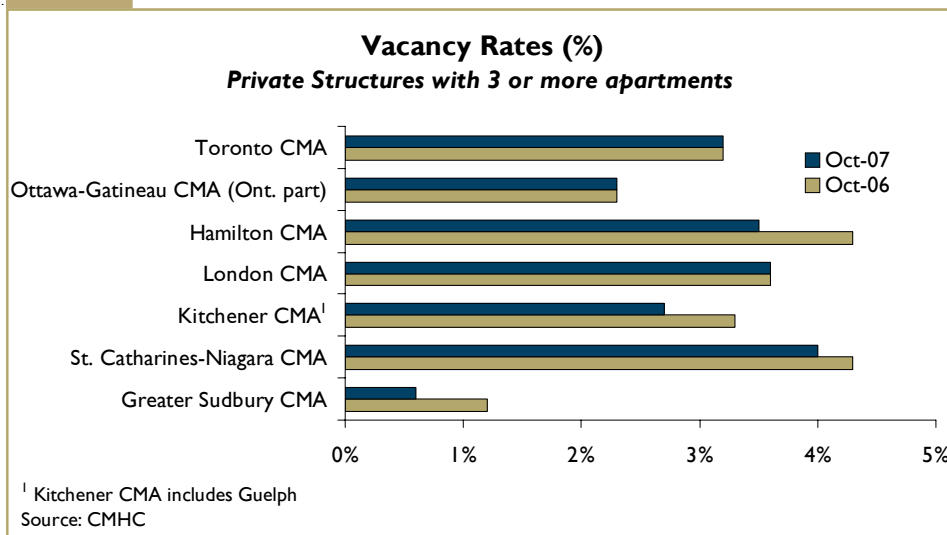

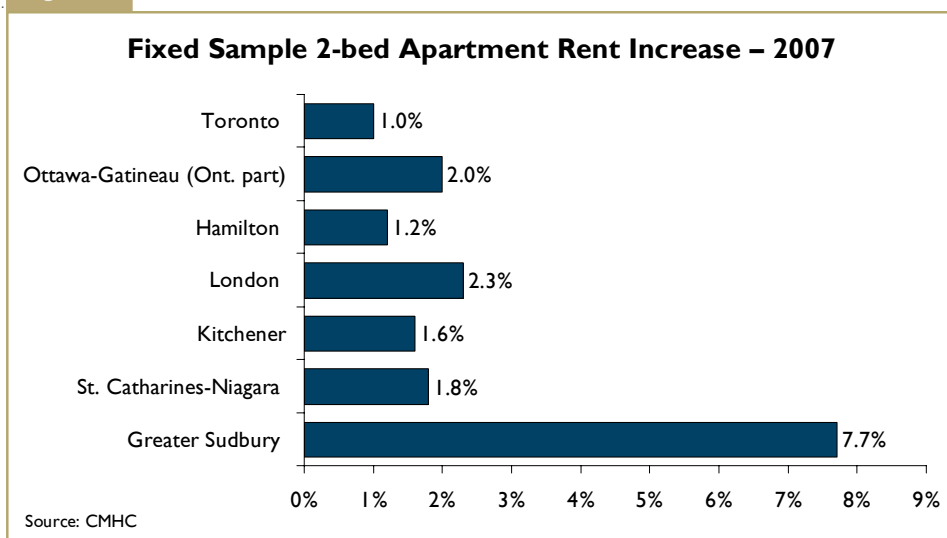

Figure 2

\*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAs.

## Highlights

- Ontario vacancy rates inch lower in October 2007, but remain relatively stable since 2006.
- Vacancy rates decline for bachelor and one bedroom apartments while rising for three bedroom apartments.
- Vacancy rates dropped most in Thunder Bay, Guelph and Hamilton while increasing most in Windsor, Kingston and Brantford.
- Vacancy rates remained stable in Toronto, Ottawa and London in 2007.
- Vacancy rates remain well below the provincial average in Greater Sudbury and well above average in Windsor, St. Catharines-Niagara and Thunder Bay.
- Above average Ontario vacancy rates kept the growth in 2-bedroom fixed sample rents below allowable rent guideline increases set out by the province in 2007.
- Notable factors adding to rental demand include: a stronger youth labour market and declining condominium completions.
- Notable factors weighing on rental demand include: a narrowing cost gap between owning and renting and declining international migration.

## Ontario Vacancy Rates Remain Stable in October 2007

For a third consecutive year, Ontario rental apartment vacancy rates edged lower, albeit very mildly in October 2007. Ontario vacancy rates dropped to 3.3 per cent this year from 3.4 per cent in 2006. Notable drops in vacancy rates occurred in bachelor units and one bedroom apartments while two and three bedroom apartment units remained at and well above last year's levels respectively. Despite recent declines in Ontario vacancy rates, provincial vacancy rates still remain above historical averages.

Movements in vacancy rates varied across the province although most centres registered vacancy rates at or below last year's levels. More notable examples of tighter than average rental markets include Greater Sudbury and Guelph. Greater Sudbury's rental and ownership markets, which are among the tightest across the country, are benefiting from a boom in mining activity driven by rising commodity prices. This in turn is boosting employment growth and in-migration. Meanwhile, vacancy rates remained above provincial averages in goods-producing centres such as Windsor, St. Catharines-Niagara and Thunder Bay. A Canadian dollar above parity and slower US economic growth dampened local business and housing market conditions in these centres.

Toronto, Ottawa and London, which boast more diversified economies, experienced no change in vacancy rates in 2007.

Above average Ontario vacancy rates kept the growth in 2-bedroom apartment fixed sample rents below allowable rent guideline increases set out by the province in 2007. When adjusted for inflation, overall Ontario rent levels remain in line with comparable rents in 1999.

While general economic conditions highlighted above influence rental markets, the balance between rental demand and supply determines the level of vacancy rates. A number of factors have increased rental demand and put downward pressure on vacancy rates. Firstly, younger Ontarians under the age of 24 typically have fewer financial resources and therefore are more likely to opt for rental accommodation during their early adult years. This is especially true if they are successful in landing a job. Young adults are more likely to have been employed in the service sector, a sector enjoying healthy job gains recently. While some young adults may have opted to stay home longer, some have left the parental home and increased their demand for rental accommodation in 2007.

Secondly, fewer completed apartment ownership units boosted conventional rental demand further. Condominium apartments are a cost effective way for first time buyers to

enter the homeownership market. Fewer apartment completions meant fewer renter households were vacating their rental units to take occupancy of their apartment ownership units in 2007.

On the supply side, declining condominium rental completions also helped sustain demand for existing purpose-built rental accommodation. Condominium apartments are bought by investors and subsequently leased out to prospective tenants. Less competition from secondary rental sources benefited the purpose-built rental apartment market.

While vacancy rates inched lower, they remained stable as other factors weighed on rental demand and kept vacancy rates elevated. A notable factor was the cost gap between owning and renting a home which narrowed in 2007. Households opting for mortgages with longer amortizations experienced a relative drop in monthly carrying costs vis-a-vis the cost of renting. Recent surveys suggest that price sensitive first time buyers were very active in this year's ownership market. In fact, vacancy rates edged higher for apartment units whose rent structure was in direct competition with homeownership.

A second factor weighing on rental demand was Ontario's immigration story. Immigrants tend to rent upon arrival in Canada and boost demand for rental accommodation. While

Ontario has traditionally been the destination for over half of new immigrants into Canada, Ontario's share of international migrants has edged lower in recent years offering less stimulus to the rental market.

CMHC's October Rental Market Survey, which covers private row and apartment structures with three or more units, is being expanded to include information on the secondary rental market. More specifically, CMHC will now provide information on

apartment condominiums offered for rent in the following centres: Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal and Québec. The additional information should help to provide a more complete overview of the rental markets in those centres. Also, for 12 CMAs, including Vancouver, Toronto and Montréal, the following types of units are now surveyed:

- rented single-detached houses;
- rented double (semi-detached) houses;

- rented freehold row/town houses;
- rented duplex apartments;
- rented accessory apartments;
- rented apartments which are part of a commercial or other type of structure containing one or two dwelling units.

The methodology section at the end of this report provides more detailed information on the Secondary Rental Market Survey.

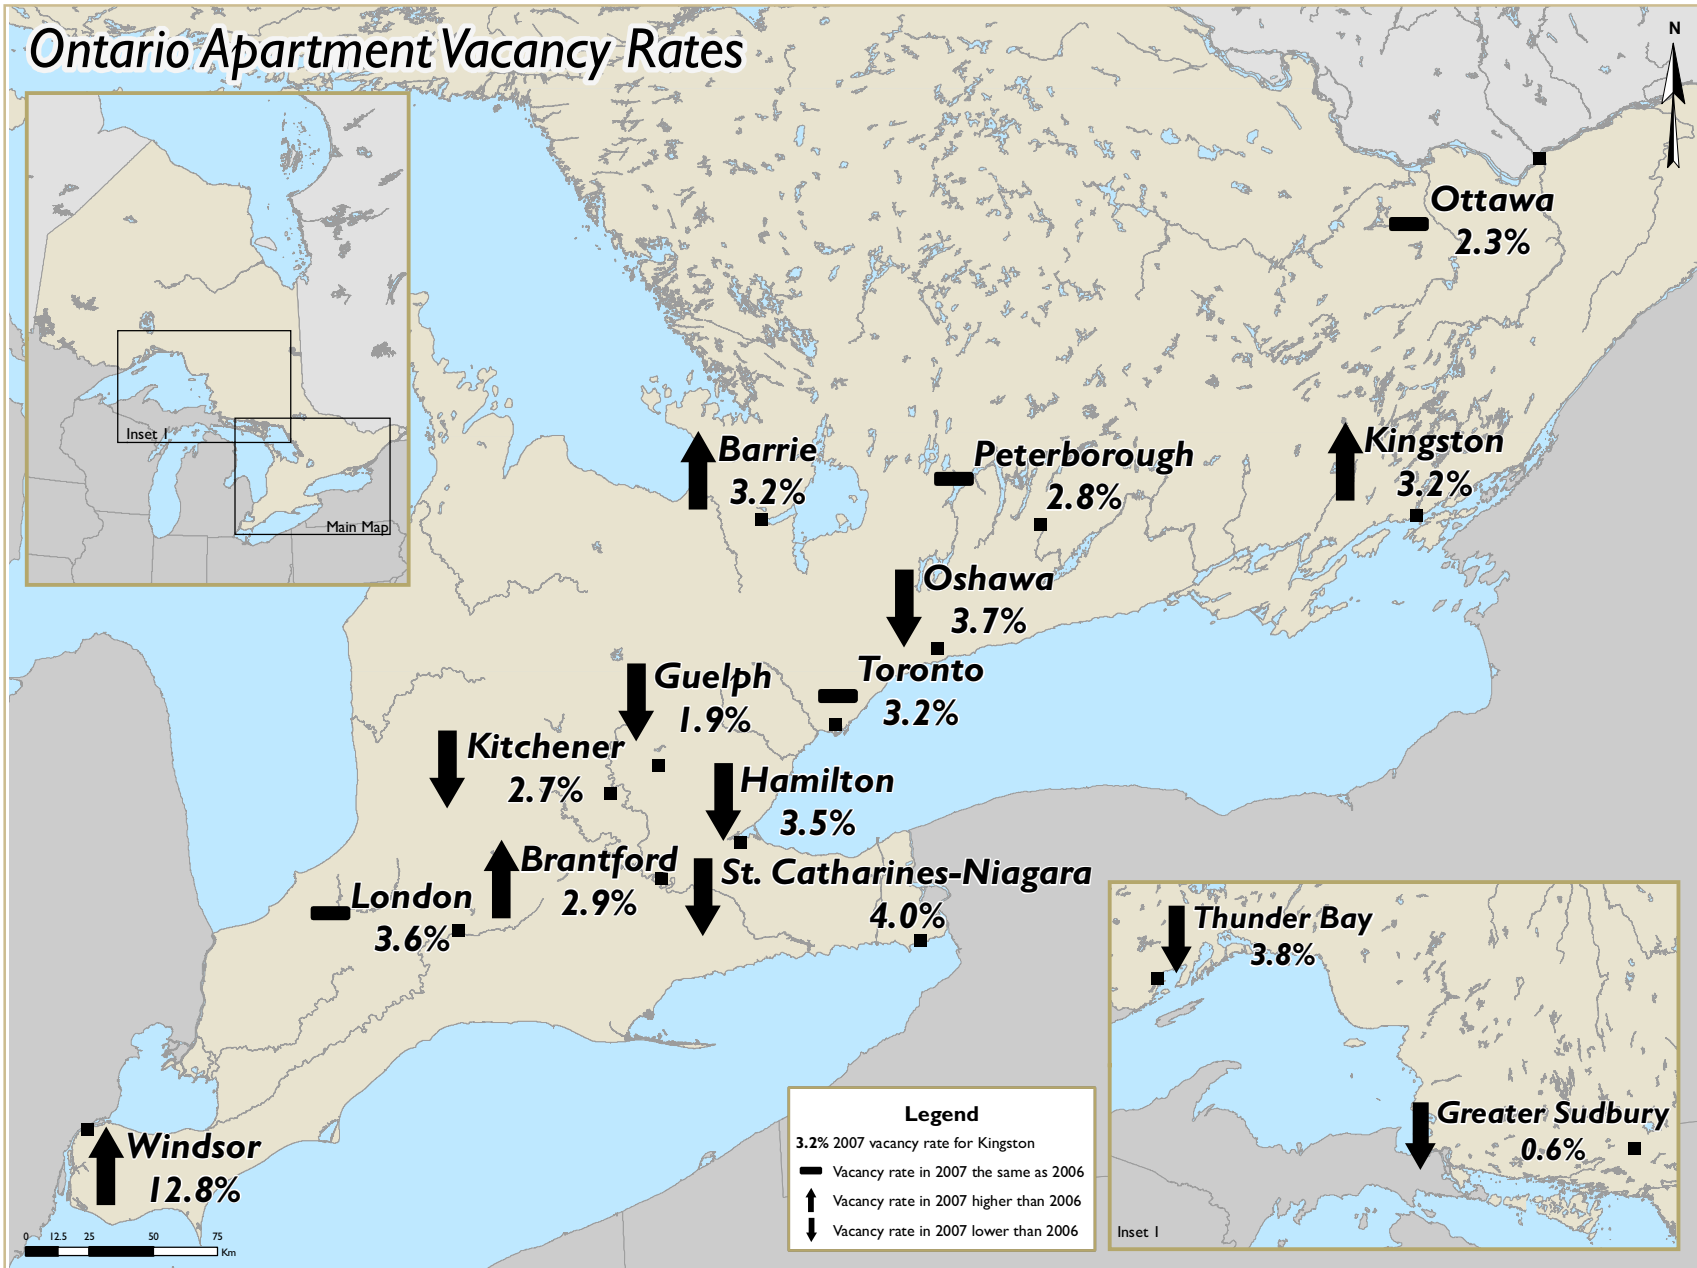

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in 2006 vs. \$550 in 2007 represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the 2006 and 2007 Fall Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

\* The Estimate of Percentage Change is a measure of the market movement, and is based on those structures that were common to the survey for both years

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. In 2007, rented condominium apartments were surveyed in the following CMAs: Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal and Québec. Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Kelowna, Toronto and Vancouver.

## DEFINITIONS

F

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2006 data presented in this publication is based on Statistics Canada's 2001 Census area definitions. October 2007 data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household incomes for 2006 and 2007.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
