Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

1990

Ingram, J.H. and B.V. Ensor. 1989. Capture and distribution of Atlantic salmon in the Mactaquac area, Saint John River system, 1983-1988. Can. Data Rep. Fish. Aquat. Sci. No. 791: 55 p.

This report provides counts and summaries of wild and hatchery one-sea-winter and multi-sea-winter Atlantic salmon ascending Mactaquac Dam fish collection facilities and the Mactaquac Hatchery migration channel on the Saint John River, New Brunswick, 1983-1988. Distributions include the numbers of male and female fish of wild and hatchery origins retained as broodstock and those trucked to upriver release sites. Counts of other species, including alewives and blueback herring ascending Mactaquac Dam fish collection facilities, are also summarized.

Key words: Saint John River, Mactaquac Dam, fish collection facilities, Mactaquac Hatchery, Atlantic salmon, grilse, broodstock, other species, fish distribution, migration channel.

RÉSUMÉ

1990

Ingram, J.H. and B.V. Ensor, 1989. Capture and distribution of Atlantic salmon in the Mactaquac area, Saint John River system 1983-1988. Can. Data Rep. Fish. Aquat. Sci. No. 791: 55 p.

Le présent rapport contient les chiffres détaillés et sommaires des saumons de l'Atlantique d'élevage unibermarins et redibermarins ayant remonté les installations de capture du poisson du barrage de Mactaquac et le corridor de cueillette de la station d'alevinage de Mactaquac, situés sur le fleuve Saint-Jean au Nouveau-Brunswick, de 1983 à 1988. Les chiffres en question révèlent le nombre de femelles et de mâles d'élevage et sauvages gardés comme reproducteurs ainsi que le nombre de saumons amenés en camion en amont du barrage pour être remis à l'eau. Le rapport contient également des chiffres sommaires sur les gasparots et les aloises d'été qui remontent les installations de capture du barrage de Mactaquac.

Mots clés: Fleuve Saint-Jean, barrage de Mactaquac, installations de capture du poisson, station d'alevinage de Mactaquac, saumon de l'Atlantique, madeleineau, reproducteurs, autres espèces, répartition du poisson, corridor de cueillette.

INTRODUCTION

The Mactaquac hydroelectric power dam, which spans the main stem of the Saint John River about 16 km upstream from Fredericton, New Brunswick, first became operational in 1967. Fish collection facilities at the dam first became operational in the spring of 1968. To compensate for expected losses in natural production of Atlantic salmon (Salmo salar), Mactaquac Hatchery was constructed in 1968 about 2 km below the power dam.

Most upriver-migrating fish ascend the Mactaquac Dam collection facilities built along the downstream face of the power dam's first four of six turbines. In addition, some salmon mainly of hatchery origin, ascend the smolt migrating channel or water outflow of the hatchery. Returning adults of hatchery origin can be identified by eroded fins, clips or tags applied prior to their release; or freshwater growth characteristics on scales. Smolts released from Mactaquac since 1985 have spent one year in freshwater whereas wild fish have spent two or more years in freshwater.

To enable easier sorting of salmon and to obtain biological data on each, a secondary sorting facility was built at the hatchery in 1971.

This report provides daily and summary counts of anadromous Atlantic salmon captured at Mactaquac facilities from 1983 to 1988 and a continuum of compilations for the years 1967-71 (Smith 1979), 1972-76 and 1977-82 (Ingram 1980 and 1985). Also included are summary counts and estimates of some other fish species ascending the Mactaquac Dam fish collection facilities. The 1989 salmon data is on computer and plans are to continue this format in subsequent years.

PRESENTATION OF DATA

The tables and appendices of this report provide detailed counts of Atlantic salmon taken at both the fish collection facilities of Mactaquac Dam and the trap in the smolt migration channel from the Mactaquac Hatchery.

Of the salmon released above Mactaquac, the occasional fish may fall back below the dam and be counted a second time. Counts in this report are not adjusted for fallback.

Salmon from the collection facilities at the dam are trucked to a holding pool attached to the secondary sorting facilities at the hatchery. Depending on the number of salmon available, they may be held overnight or longer before being counted through the secondary sorting facilities. Fish from the migration channel trap are normally removed just before or during a sorting operation. The dates shown in the tables are those when the fish were counted through the secondary sorting facilities.

In this report, the term "salmon" refers to fish which have spent one or more winters at sea before returning to home waters; i.e., it indicates both grilse or one-sea-winter (1SW) fish as well as older and larger multi-sea-winter including repeat spawning (MSW) fish. The sex of the fish was determined by external examination.

The number of fish of species other than Atlantic salmon were estimated when transferred from the brail pool to the hopper at the fish collection facilities of the dam (Fig. 3, Ingram 1980). Estimates are minimal as small fish are able to pass through the wire mesh of the hopper and barrier gates.

ACKNOWLEDGEMENTS

The authors would like to thank biologist Dr. T.L. Marshall, who carried out a constructive review of this report.

APPENDIX A

DAILY ATLANTIC SALMON COUNTS,
MACTAQUAC HATCHERY
SECONDARY SORTING FACILITIES

Numbers include 1SW and MSW salmon of wild and hatchery origins, taken at both the Mactaquac Dam collection facilities and the Mactaquac Hatchery migration channel. Dates are those during which the fish were processed through the secondary sorting facilities and not necessarily the dates on which they were first recovered.

APPENDIX B**DAILY DISTRIBUTION OF ATLANTIC SALMON
TO THE WOODSTOCK RELEASE SITE**

Numbers include 1SW and MSW salmon of wild and hatchery origin, sorted by sex, taken at both the Mactaquac Dam collection facilities and the Mactaquac Hatchery migration channel. The salmon were trucked from the sorting facilities at Mactaquac Hatchery and released just above the town of Woodstock at a point approximately 17 km below the upper end of the Mactaquac Headpond.

APPENDIX C**DAILY DISTRIBUTION OF ATLANTIC SALMON
TO THE TOBIQUE RIVER RELEASE SITE**

Numbers include 1SW and MSW salmon of wild and hatchery origin, sorted by sex, and trucked directly from the secondary sorting facilities at Mactaquac to the Tobique release site. The release site is near Arthurette and located on the north bank of the Tobique Narrows headpond, about 15 km above the dam and 2.5 km below the upper end of the headpond.

APPENDIX D**ESTIMATED SEMI-MONTHLY TOTALS OF FISH OTHER
THAN ATLANTIC SALMON ASCENDING MACTAQUAC FISH
COLLECTION FACILITIES**

Estimated semi-monthly totals of each species are determined when the fish are transferred from the brail pool to the hopper pool. When fish such as alewives are ascending in large numbers, they are counted by tens as they pass from the brail into the hopper. There is no count on fish that are able to pass through the wire mesh (rectangular opening 3.8 cm x 5.1 cm) of the hopper and barrier gates. Fish such as eels and perch are not estimated.

Table D-1. Estimated semi-monthly totals of fish other than Atlantic salmon ascending Macaque collection facilities in 1983.
