## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

## Note de reconnaissance

*Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.*

## Release schedule

The Provincial Economic Accounts are currently released twice a year. The preliminary version, released approximately four months after the reference year, includes estimates of GDP, sources and disposition of personal income and selected economic indicators for the provinces and territories. The other release of the Provincial Economic Accounts, available about ten months after the reference period, comprises revisions to the three previous years. Also included are detailed tables on government sector revenue and expenditures for the previous year.

## Note

Most series shown in these tables have two lines. The first of these lines is the series itself, usually expressed in millions of dollars and sometimes expressed as an index with 1997=100. The second line, italicized and in smaller typeface, is the annual percentage change. The percentage change line is omitted for series which are either very volatile or quite small.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

## Échéancier

Actuellement, les Comptes économiques provinciaux sont mis à jour deux fois l'an. La version préliminaire qui est diffusée environ quatre mois après la période de référence, présente des estimations du PIB, de la provenance et l'emploi du revenu personnel et de certains indicateurs économiques pour les provinces et territoires. L'autre version, disponible environ dix mois après la période de référence, comprend les révisions apportées aux estimations des trois années antérieures. Elle présente aussi les tableaux détaillés sur les recettes et dépenses du secteur des administrations pour l'année précédente.

## Note

La plupart des séries figurent dans ces tableaux sous deux lignes. La première ligne représente la série elle-même, habituellement exprimée en millions de dollars, et parfois sous forme d'indice (1997=100). La deuxième ligne, en italique et en caractères plus petits, représente la variation annuelle en pourcentage. Dans le cas des séries très instables ou très faibles, la ligne de variation en pourcentage est omise.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'«American National Standard for Information Sciences» - «Permanence of Paper for Printed Library Materials», ANSI Z39.48 - 1984.

## Concepts, methodology, data quality

The following information should be used to ensure a clear understanding of the basic concepts that define the data provided in this product, of the underlying methodology, and of aspects of data quality. This information will provide users with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analysed.

### Concepts and variables measured

At the core of the PEA is the concept of Gross domestic product (GDP) and its components. It is a measure of aggregate economic activity that represents the unduplicated value of production in two ways: (i) Incomes arising from production and (ii) final expenditures on production. The first is the sum of factor incomes generated by productive activity – that is, incomes representing the returns to the labour and capital employed. The second is the sum of all sales to final users (consumers, governments, business on capital account, exports less imports). The two measures of GDP may not be equal to each other, giving rise to a statistical discrepancy.

### GDP income-based

The income-based estimates show factor incomes accruing to labour and capital generated as part of the production process. The largest source of factor income is wages, salaries and supplementary labour income, which accounts for over half of GDP. The other income components are corporation profits before taxes, interest and miscellaneous investment income, accrued net income of farm operators, net income of non-farm unincorporated business (including rent), and inventory valuation adjustment. Together these six aggregates, plus taxes less subsidies on factors of production, yield Net Domestic Product at basic prices. GDP at market prices is calculated by adding taxes less subsidies on products as well as capital consumption allowances and one half of the statistical discrepancy.

### GDP expenditure-based

On the expenditure-based side, GDP is broken down into the categories of final purchases of goods and services. The major aggregate is personal expenditure on consumer goods and services, accounting for close to 60% of GDP. Government current expenditure on goods and services is a second component and government and business investment spending is a third. The sum of these components of the summary expenditure account is referred to as final domestic demand. To move from final domestic demand to GDP, the value of physical change in inventories, net exports of goods and services (that is, exports minus imports) and one-half of the statistical discrepancy are added.

## Concepts, méthodologie, qualité des données

Les renseignements qui suivent sont destinés à faciliter la compréhension des concepts de base qui définissent les données fournies par ce produit, de la méthodologie qui les sous-tend ainsi que des aspects liés à la qualité des données. Ils permettront aussi à leurs utilisateurs d'avoir une meilleure compréhension des limites des données ainsi que de la façon de les utiliser et de les analyser à bon escient.

### Concepts et variables mesurées

Les Comptes des revenus et des dépenses (CRD) ont pour concept central celui du Produit intérieur brut (PIB) et de ses composantes. Il s'agit d'une mesure agrégée de l'activité économique qui représente la valeur sans double compte de la production établie de deux façons : d'après les revenus générés par la production, d'une part, et d'après les dépenses finales au titre de la production, d'autre part. La première mesure consiste simplement à additionner les revenus des facteurs générés par l'activité de production, c'est-à-dire les revenus représentant le rendement de la main-d'œuvre et du capital utilisés. La deuxième consiste à additionner toutes les dépenses des utilisateurs finals (consommateurs, administrations publiques, dépenses des entreprises en capital, exportations nettes). Ces deux mesures du PIB ne sont pas nécessairement égales, ce qui produit une divergence statistique.

### PIB en termes de revenus

Les estimations en termes de revenus montrent les revenus des facteurs afférents au travail et au capital qui sont générés dans le cadre du processus de production. Les salaires, traitements et revenus supplémentaires du travail, qui représentent plus de la moitié du PIB, constituent la source la plus importante de revenus des facteurs. Les autres composantes des revenus sont les bénéfices des sociétés avant impôts, les intérêts et revenus divers de placements, les revenus nets des exploitants agricoles, les revenus nets des entreprises non agricoles non constituées en société (y compris les loyers) et l'ajustement de la valeur des stocks. Ensemble, ces six agrégats, majorés des impôts moins les subventions sur les facteurs de production, donnent le produit intérieur net aux prix de base. Le PIB aux prix du marché se calcule en ajoutant les impôts moins les subventions sur les produits, ainsi que les provisions pour consommation de capital et la moitié de la divergence statistique.

### PIB en termes de dépenses

Dans le cas de l'estimation en termes de dépenses, le PIB est ventilé selon les catégories d'achats finals de biens et de services. Les dépenses personnelles en biens et services de consommation, qui représentent près de 60 % du PIB, constituent l'agrégat le plus important. La deuxième composante est constituée des dépenses courantes des administrations publiques en biens et services alors que les dépenses d'investissement des administrations publiques et des entreprises forment la troisième. La somme de ces composantes du compte sommaire des dépenses est appelée demande intérieure finale. Pour passer de cette dernière au PIB, il faut ajouter la valeur de la variation matérielle des stocks, les

exportations nettes de biens et de services (c.-à-d. les exportations moins les importations) et la moitié de la divergence statistique.

## Real GDP

Real GDP is related directly to other key macroeconomic variables such as employment, business cycles, productivity and long-term economic growth.

Real GDP is a measure of the volume of production. To measure this concept, GDP expenditure-based components are adjusted to eliminate the effect of price change. This process is known as deflation, and makes use of expenditure-side associated price indexes. Until 2001, real GDP was calculated by using a 'Laspeyres' formula. As of fall 2001, the PEA adopted the Fisher index formula, chained quarterly, as the official measure of real expenditure-based GDP. The reason for the adoption of this particular formula is that it produces the most accurate measure of quarter to quarter growth in GDP.

## Coverage

GDP includes all activities within the SNA production boundary. Illegal transactions are, for the most part, excluded.

## Sector accounts

The PEA also provide considerable information on the four major sectors of the economy: persons and unincorporated business, corporations, governments and non-residents. The sector accounts record (i) incomes and outlays, (ii) saving and investment and (iii) transactions in financial assets and liabilities for each of the four broad sectors of the economy. Also included are detailed tables on government sector revenue and expenditures for the previous year. The sum of the final (non-transfer) income, or the final (non-intermediate) expenditure, of the sectors equals gross national product.

A sector has current incomes and current outlays. The difference between the two is saving. Saving, combined with capital consumption allowances and net capital transfers, is a source of funds for investment, or non-financial capital acquisition. To the extent that saving exceeds (falls short of) investment the sector is said to be in a net lending (net borrowing) position. A second measure of net lending/borrowing is provided by the difference between the transactions in financial assets less the transactions in liabilities and equity. The two measures differ somewhat due to statistical errors.

## PIB réel

Le PIB réel est en rapport direct avec d'autres variables macroéconomiques importantes, telles que l'emploi, les cycles économiques, la productivité et la croissance économique à long terme.

Le PIB réel est une mesure du volume de production. Pour mesurer ce concept, on ajuste les composantes du PIB en termes de dépenses afin d'éliminer l'effet de la variation des prix. Ce processus, qui est appelé déflation, s'appuie sur les indices de prix associés au côté dépenses. Jusqu'à 2001, on calculait le PIB réel selon la formule de Laspeyres. Depuis l'automne 2001, la division chargée de produire les comptes trimestriels des revenus et des dépenses a adopté la formule de l'indice en chaîne de Fisher comme mesure officielle du PIB réel en termes de dépenses. Cette formule a été choisie parce qu'elle produit la mesure la plus exacte de la croissance du PIB d'un trimestre à l'autre.

## Couverture

Le PIB inclut toutes les activités comprises dans le domaine de la production du Système des comptes nationaux (SCN). Les transactions illégales sont, pour la plupart, exclues.

## Comptes sectoriels

Les CÉP fournissent aussi une foule de renseignements sur quatre grands secteurs de l'économie, à savoir les particuliers et les entreprises individuelles, les sociétés, les administrations publiques et les non-résidents. Sont enregistrés dans les comptes sectoriels i) les revenus et les dépenses, ii) l'épargne et l'investissement, et iii) les transactions relatives aux actifs et aux passifs financiers pour chacun des quatre grands secteurs de l'économie. Les CÉP présentent aussi des tableaux détaillés sur les recettes et dépenses du secteur des administrations publiques pour l'année précédente.. La somme des revenus finals (ne provenant pas de transferts) ou des dépenses finales (non intermédiaires) des secteurs est égale au produit national brut.

Tout secteur a des revenus et des dépenses courantes. La différence entre les deux est l'épargne. Conjuguée aux provisions pour consommation de capital et aux transferts nets de capitaux, l'épargne est une source de fonds pour l'investissement ou pour l'acquisition de capital non financier. Dans la mesure où l'épargne est supérieure (inférieure) à l'investissement, le secteur est considéré comme étant dans une position de prêt net (emprunt net). Une deuxième mesure du prêt/de l'emprunt net peut être obtenue en calculant la différence entre les transactions en actifs financiers nettes et les transactions en passifs et en capitaux propres. Il existe certains écarts entre les deux mesures à cause des erreurs statistiques.

## Data sources and methodology

The Provincial Economic Accounts (PEA) provide a measure of macroeconomic activity on an annual basis, as represented by income and expenditure-based GDP, and rely heavily on a wealth of information from various areas of Statistics Canada.

### Sources

A large amount of information from various survey divisions within the bureau, along with other data, is compiled, integrated and analysed as part of the complex process of arriving at provincial GDP's and their component categories and underlying sector accounts.

Major suppliers of data within Statistics Canada include: Agriculture Division, Investment and Capital Stock Division, Income Statistics Division, International Trade Division, Distributive Trades Division, Manufacturing, Construction and Energy Division, Industrial Organization and Finance Division, Labour Division, Prices Division, Public Institutions Division, and Tax Data Division. Numerous external and administrative sources of data are also used.

### General methodology

Final expenditure measures by detailed component are compiled for the major sectors of the economy. Data are analysed for time series consistency, links to current economic events, issues arising from the source data, and with respect with coherence. The same process is followed for the income measures. Initial estimates of income and expenditure-side GDP are then produced, and the discrepancy is assessed. Real estimates are then compared with the results of the provincial GDP by Industry program. Annually, provincial the income and expenditure data are benchmarked to the Input-Output Accounts.

For further details on definitions, concepts, and sources and methods, please refer to the *Guide to the Income and Expenditure Accounts*, catalogue no. 13-603E.

### Seasonal adjustment

Almost all series of the quarterly PEA are seasonally-adjusted. Seasonal adjustment is generally made at the lowest level of aggregation, and seasonally-adjusted aggregates are obtained by summation. Statistics Canada's X-11 ARIMA is used to seasonally adjust series.

### Revisions

Preliminary estimates are released in the spring following the end of the reference period, and revised in the fall of the same year. This latter release also comprises revisions to

Les Comptes économiques provinciaux (CÉP) donnent une mesure annuelle de l'activité macroéconomique, telle que représentée par le PIB en termes de revenus et de dépenses, dont la production dépend fortement d'une foule de renseignements fournis par divers programmes de Statistique Canada.

### Sources

Le processus complexe de calcul du PIB par province, de ses composantes et des comptes sectoriels sous-jacents nécessite la compilation, l'intégration et l'analyse d'une très grande quantité d'information provenant de diverses divisions d'enquête du Bureau, conjuguée à d'autres données.

À Statistique Canada, les grands fournisseurs de données incluent la Division de l'agriculture, la Division de l'investissement et du stock de capital, la Division de la statistique du revenu, la Division du commerce international, la Division de la statistique du commerce, la Division de la fabrication, de la construction et de l'énergie, la Division de l'organisation et des finances de l'industrie, la Division du travail, la Division des prix, la Division des institutions publiques et la Division des données fiscales. Il existe aussi une grande quantité de sources de données externes et administratives.

### Méthodologie générale

Les dépenses finales selon les composantes détaillées sont calculées pour les grands secteurs de l'économie. Les données sont analysées afin de vérifier l'uniformité des séries chronologiques, d'établir des liens avec les événements économiques courants, de cerner les problèmes découlant des données sources et d'assurer la cohérence. Le même processus est suivi pour les mesures du revenu. Viennent ensuite la production des estimations initiales du PIB calculé selon les revenus et selon les dépenses et l'évaluation de la divergence. Puis, les estimations réelles sont comparées aux résultats du programme d'évaluation du PIB par province selon l'industrie. Annuellement, les données provinciales sur les revenus et les dépenses sont étalonnées d'après les comptes des entrées-sorties.

Pour plus de détails sur les définitions, les concepts, les sources et les méthodes, veuillez consulter le *Guide des comptes des revenus et dépenses*, no 13-603F au catalogue.

### Désaisonnalisation

Presque toutes les séries des CÉP trimestriels sont désaisonnalisées. En général, la désaisonnalisation est faite au niveau d'agrégation le plus petit et les agrégats désaisonnalisés sont obtenus par sommation. Les séries chronologiques sont désaisonnalisées selon la méthode X-11 ARIMA de Statistique Canada.

### Révisions

Les estimations préliminaires sont publiées au printemps suivant l'année de référence et révisées à l'automne de la même année. Lors de la diffusion automnale, des révisions

the three previous years. Estimates are not normally revised again except when historical revisions are carried out, usually once per decade. Statistical revisions are carried out in order to incorporate the most recent information from surveys, taxation statistics, public accounts, censuses, etc., as well as from the annual benchmarking process of the Input-Output Accounts.

### Data quality (accuracy)

The accounts are designed as a double-entry system in which the income- and expenditure-based GDP totals should, in principle, be identical. In fact, a difference virtually always arises between them due to errors in the source data, imperfect estimation techniques, differing seasonal adjustment methods and discrepancies in the time at which the incomes and expenditures are recorded.

The size of the discrepancy, which stems from the estimation procedure, is one gauge of the system's overall reliability. However, it is a partial and quite insufficient gauge. Another quality measure is how well real expenditure-side GDP compares to the real GDP by Industry measure.

No direct measures of the margin of error in the estimates can be calculated. The quality of the estimates can be inferred from analysis of revisions and from a subjective assessment of the data sources and methodology used in the preparation of the estimates.

### Comparability of data and related sources

It is not possible to produce an equivalent to Provincial Economic Accounts, as measured in terms of income and expenditures except at the aggregate level. At the level of GDP, the unduplicated value of production can also be measured by taking the gross value of production of each firm and subtracting each firm's intermediate inputs in the form of its purchases from other firms (including imports) to yield the 'net value added' to production by the firm. Estimates of this type are produced in the provincial Input-Output tables, as well as in the monthly industry-based estimates of GDP by province.

Certain components of income and expenditure-based GDP can be obtained in survey divisions, but typically the data are not directly comparable. For example, the variable "corporate profits" is published in the Quarterly Financial Statistics release, but it differs from the income-based GDP measure due to certain national accounts' concept adjustments. Also, the national estimates have to be allocated by province and by territory to reflect where the activity took place rather than where the head office is located.

sont aussi apportées aux estimations des trois années antérieures. Normalement, les estimations ne sont plus révisées après cela, sauf quand une révision historique est réalisée, habituellement une fois tous les dix ans. Des révisions statistiques sont faites afin d'intégrer l'information la plus récente tirée des enquêtes, des statistiques sur l'impôt, des comptes publics, des recensements, etc., ainsi que du processus annuel d'étalonnage d'après les comptes d'entrées-sorties.

### Qualité des données (exactitude)

Les comptes sont conçus comme un système à double entrée dans lequel les valeurs totales du PIB en termes de revenus et de dépenses devraient, en principe, être identiques. En fait, il existe presque toujours un écart entre les deux à cause de la présence d'erreurs dans les données de référence, de l'imperfection des techniques d'estimation, de différences entre les méthodes de désaisonnalisation et de différences entre les moments où les revenus et les dépenses sont enregistrés.

La grandeur de la divergence, qui découle de la procédure d'estimation, est un indicateur de la fiabilité globale du système. Cependant, cet indicateur n'est que partiel et plutôt insuffisant. Un autre indicateur de qualité est la mesure dans laquelle le PIB réel en termes de dépenses se compare au PIB réel selon l'industrie.

Aucune mesure directe de la marge d'erreur dans les estimations ne peut être calculée. Il est toutefois possible d'inférer la qualité des estimations d'après l'analyse des révisions et d'après une évaluation subjective des sources de données et de la méthodologie utilisées pour produire les estimations.

### Comparabilité des données et des sources connexes

Il est impossible de produire un équivalent des Comptes économiques provinciaux, mesurés en termes de revenus et de dépenses, sauf au niveau agrégé. Au niveau du PIB, la valeur sans double compte de la production peut également être mesurée en soustrayant de la valeur brute de la production de chaque entreprise, la valeur des intrants intermédiaires de l'entreprise sous forme de ses achats auprès d'autres entreprises (y compris les importations). On obtient ainsi la « valeur ajoutée nette » de l'entreprise à la production. Des estimations de ce type sont produites dans les tableaux provinciaux des entrées- sorties, ainsi que dans les estimations du PIB par province selon l'industrie.

Certaines composantes des valeurs du PIB en termes de revenus et de dépenses peuvent être obtenues auprès des divisions d'enquête, mais, habituellement, les données ne sont pas directement comparables. Ainsi, la variable « bénéfiques des sociétés » est publiée dans les Statistiques financières trimestrielles, mais elle diffère de la mesure du PIB en termes de revenus à cause de certains ajustements apportés aux concepts des comptes nationaux. De plus on doit faire la répartition des bénéfiques des sociétés par province et par territoire de façon à refléter l'endroit où l'activité a eu lieu et non l'emplacement du siège social de l'entreprise.
