## Information to access the product

This product, catalogue no. 54-205-XIE, is available for free in electronic format. To obtain a single issue, visit our website at [www.statcan.ca](http://www.statcan.ca) and select Publications.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, the Agency has developed *standards of service* which its employees observe in serving its clients.

To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on [www.statcan.ca](http://www.statcan.ca) under About us > Providing services to Canadians.

## Highlights

---

- Activity at Canada's ports hit another record high in 2004 in the wake of a moderate increase in international cargo. Overall, shipments increased at 12 of the country's top 20 ports.
- Ports handled a record high of just over 452.3 million metric tonnes of freight during the year, up 1.9% from the previous record set in 2003. However, this was a marked slowdown from the growth rate of 8.7% during the previous year.
- International cargo accounted for virtually all of the increase in tonnage during 2004.
- Despite a protracted labour dispute in the iron ore industry, international shipments increased 2.6% to a record 314.6 million tonnes. Sharp gains in crude petroleum, grains and potash offset equally sharp declines in shipments of iron ores and concentrates and coal.
- Ports handled 137.8 million tonnes of domestic cargo, virtually unchanged from 2003. Domestic shipments of crude petroleum, wheat and newsprint declined, while shipments of stone, sand, gravel and crushed stone and limestone were on the rise.
- Growth in container traffic continued unabated in both volume and tonnage handled. In 2004, ports handled a record 3.7 million twenty-foot equivalents (TEUs) containing 31.2 million tonnes of cargo, up from 3.4 million TEUs and 28.2 million tonnes in 2003.
- The port of Sept-Îles, including Pointe-Noire, recorded the biggest decline in tonnage among the 20 largest ports (-25.0%). Shipping activity at the port fell to 17.0 million tonnes, its lowest level since 1982. A prolonged labour dispute at two mining companies resulted in a 26.7% plunge in shipments of the port's major commodity, iron ore and concentrates.
- Activity at Vancouver, the nation's busiest port, rose 10.4% to 75.0 million tonnes in 2004, spurred by increased demand from Asia. The gain was due to increased shipments of several bulk commodities, coupled with a record volume of containerized cargo.
- At the port of Saint John, N.B., shipments remained virtually unchanged at 26.2 million tonnes. Domestic shipments of crude petroleum fell in the wake of declining oil production from the offshore fields of Newfoundland and Labrador.
- In Montreal, including Contrecoeur, cargo reached 23.3 million tonnes, its highest level since 1984. A record volume of container traffic contributed to a surge in international activity. Containerized cargo accounted for 58% of the international cargo handled at the port.
- Shipments at the port of Quebec, including Lévis, reached a record 21.7 million tonnes in 2004, up 6.3% from 2003. An upswing in international cargo, specifically, iron ores and concentrates, coal and fuel oils, was primarily responsible.
- Total cargo handled at Fraser River port rose 11.5% to 14.9 million tonnes, led by an increase in international containerized shipments. Since 2002, the volume of container traffic at the port has more than tripled, and the tonnage of containerized cargo now accounts for 43.0% of its international cargo.

- At the port of Halifax, shipments remained virtually unchanged at 14.2 million tonnes. In 2004, an increase in international inbound shipments of crude petroleum, the port's primary commodity, offset a sharp decline in shipments of domestic crude petroleum. Halifax was the third busiest container port in the country.
- Marine traffic to and from the United States held steady at 123.3 million tonnes as a gain in outbound shipments offset a decline in inbound cargo. Increased shipments of crude petroleum destined for the Atlantic and Gulf Coast states continued to account for the bulk of the increase in outbound cargo. The decline in inbound cargo was driven by a sharp drop in coal arriving from the Great Lakes region of the United States.
- Canada's marine traffic to and from overseas ports reached a record 191.3 million tonnes in 2004. Inbound shipments from overseas ports, fuelled by a second consecutive year of record shipments of crude petroleum, were primarily responsible for the growth. Outbound shipments showed only a moderate gain.

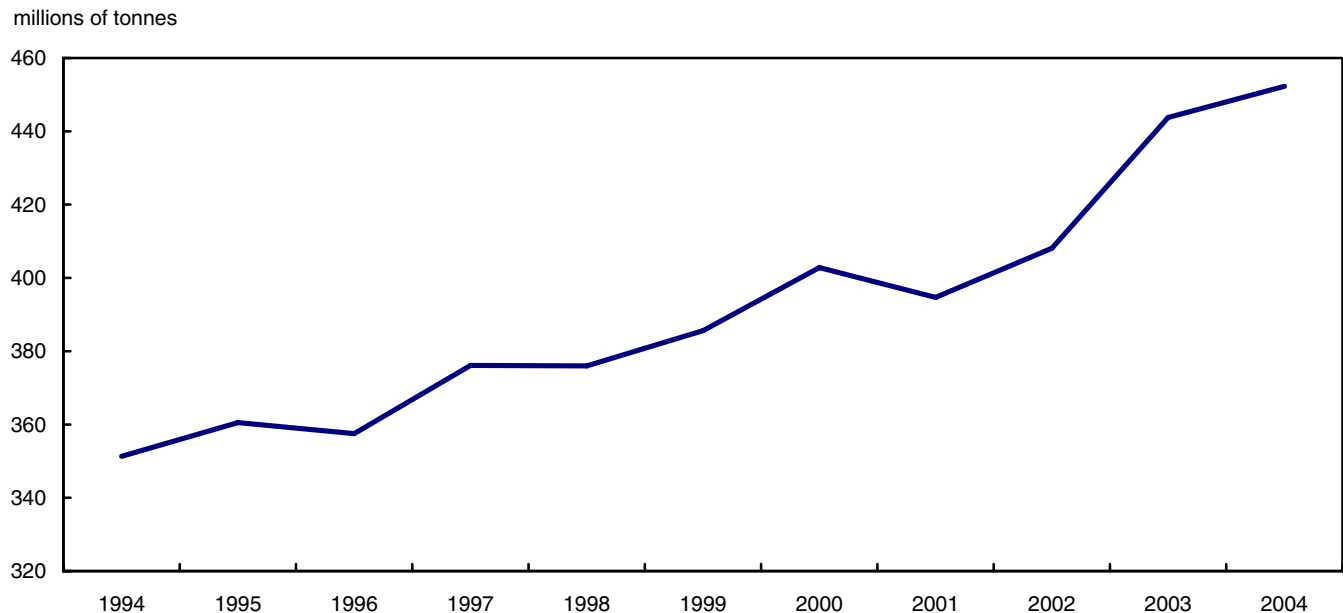

## Shipping in Canada 2004 (preliminary)

---

After experiencing strong growth in 2003, Canada's ports and marine terminals posted a slower growth rate in 2004 in the amount of cargo handled. Several events including a protracted labour dispute in the Canadian iron ore industry were responsible for the sluggish growth. On the strength of increases in both export and import demand real gross domestic product grew 3.3% in 2004 up from 2.0 % in 2003. Despite the continued strengthening of the Canadian dollar in 2004, international trade in merchandise with the United States increased for the first time since 2001 rising 5.3% to reach \$601.3 billion. Canada's merchandise trade with the rest of the world grew 11.3% to \$191.5 billion due to higher foreign imports from other countries,<sup>1</sup> predominately the Peoples Republic of China.<sup>2</sup>

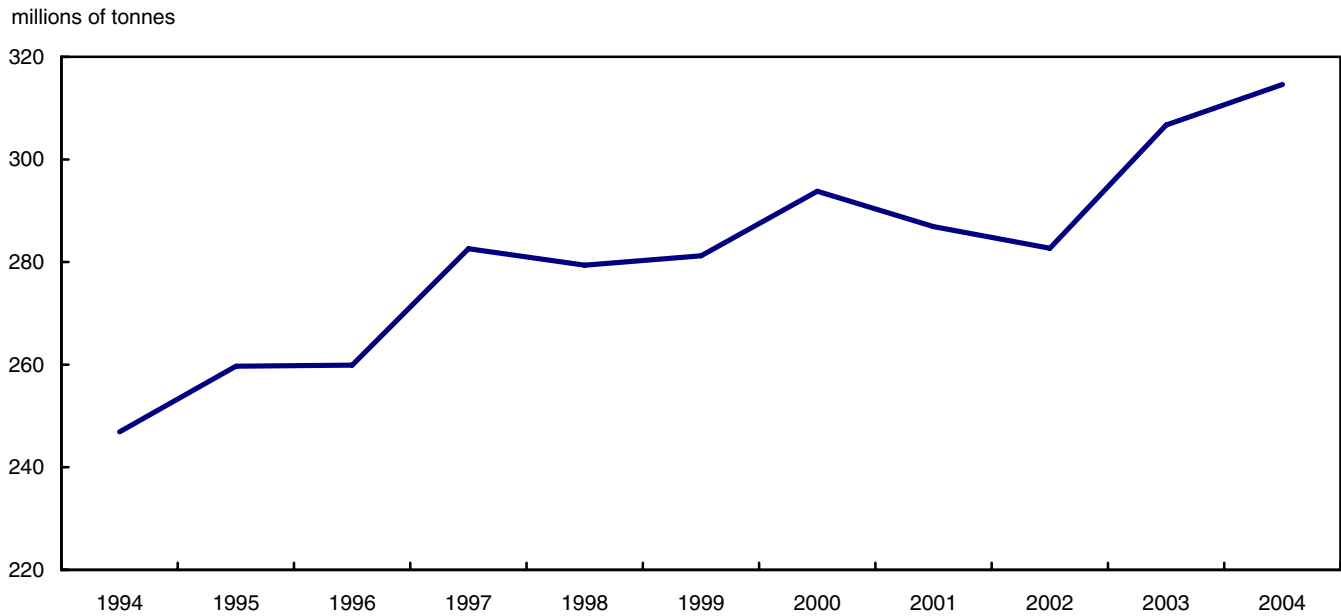

Led by a moderate increase in international cargo, Canada's port and marine terminals handled a record 452.3 million metric tonnes (Mt) up 1.9% from 2003. For a second consecutive year international cargo (between Canadian and foreign ports) reached record levels rising 2.6%, from 306.7Mt to 314.6Mt. The amount of domestic cargo (between two Canadian ports) handled saw a slight increase of 0.5%. It increased from 137.1Mt in 2003 to 137.8 Mt in 2004.<sup>3</sup>

**Chart 1**  
**Total cargo handled at Canadian ports and marine terminals**

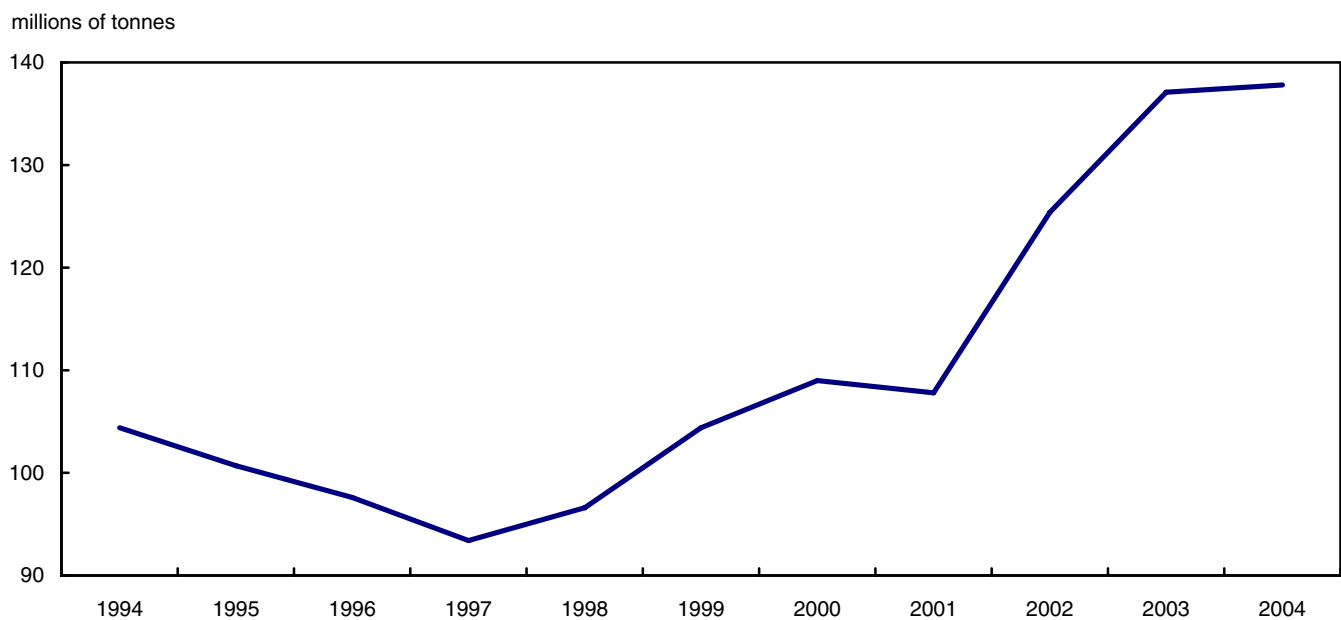

1. Other countries excludes the United States, Japan, the EU (European Union), and other countries within the OECD (Organization for Economic Co-operation and Development).
2. Statistics pertaining to 2004 and 2003 data can be found in Canadian Economic Observer; Vol 19 No 12, December 2006. Statistics Canada catalogue no 11-010-XIB. Comparative analysis were done using data taken from various issues of the Canadian Economic Observer.
3. Note that domestic cargo is handled twice by the Canadian port and terminal system, once when loaded and again when unloaded.

**Chart 2**  
**International cargo handled at Canadian ports and marine terminals**

**Chart 3**  
**Domestic cargo handled at Canadian ports and marine terminals**

## Container Traffic

Continuing the trend begun in 2002, the amount of international container traffic handled by Canadian ports reached new heights in both volume and tonnage in 2004. Canadian ports handled 3.7 million twenty-foot equivalents (TEUs) in 2004, up 8.6% from 2003. Container tonnage increased 10.7% to reach 31.2Mt in 2004 from 28.2Mt the previous

year. While the amount of container traffic with Asia continued to dominate the overall picture, the growth in tonnage in 2004 was due primarily to increased inbound traffic from Europe which rose 10.1% to reach 7.1Mt.

## **International marine cargo**

Buoyed by increased demand, primarily from the Peoples Republic of China, Canada's ports and terminals loaded 196.1Mt of cargo destined for foreign countries, including the United States, in 2004. This represents an increase of 2.5% from the previous year. The gain in outbound shipments was dampened due to a prolonged labour dispute in the iron ore industry. This resulted in a sharp decrease in international loadings of iron ore and concentrates. In 2004, Canadian ports and terminals unloaded 118.5 Mt of cargo from foreign ports, including the United States, an increase of 2.7% from the previous year. Higher inbound shipments of crude petroleum, iron and steel (primary or semi-finished) and iron ore and concentrates were sufficient to offset the decline in shipments of coal.

## **Canada – United States cargo**

After two consecutive years of growth, marine traffic between Canada and the United States held steady at 123.3Mt, virtually unchanged from the levels reported in 2003. Inbound shipments from the United States declined to their lowest levels since 1997, falling 6.4% to 39.5Mt. In contrast, outbound shipments to the United States continued its upward trend, reaching 83.8Mt in 2004, from 81.2Mt in 2003.

The decline in inbound activity was largely driven by a decline in shipments of coal, which dropped 2.9Mt in 2004. The ports primarily affected by the decline were Nanticoke, Courtright and Port Credit. The decrease was due, in part, to a decision by the Ontario government to phase out the use of coal-fired electricity generation. Despite the decline coal remained the primary commodity unloaded (40.4%) from the United States. Also contributing to the overall drop in inbound shipments were reductions in alumina and fuel oils, down 83.7% and 31.6% respectively. These declines more than offset increases in other commodities including iron ores and concentrates, which were up 19.3% and gasoline and aviation turbine fuel, up 102.4%.

While outbound shipments to the United States continued to be led by increased shipments of crude petroleum, the growth was not as dominant as in the previous two years. Since 2001, crude petroleum shipments to the United States have increased 48%. Other commodities which also experienced increases in 2004 were other non-metallic minerals and stone, sand, gravel and crushed stone. The gains in these commodities were sufficient to offset declines in both iron ores and concentrates and fuel oils.

Ships registered in Canada handled 43.0% of the Canada – United States cargo in 2004 up from 42.0% in 2003. Cargo carried by United States-flag vessels remained at 10.9%, unchanged from 2003. Foreign-flag ships carried the remaining 46.1% of Canada-United States cargo in 2004.

Canadian flagged vessels accounted for the majority (80.5%) of the Canada- United States cargo activity on the Great Lakes and an increasing amount on the Pacific Coast. Cargo handled by Canadian-flag vessels destined for United States Pacific ports has rebounded from 5.6% in 2001 to 8.2% in 2004.

## **Canada – Overseas Cargo**

Canada's marine traffic to and from overseas ports climbed 4.3% from 183.3Mt in 2003 to a reach a record 191.3Mt in 2004. This gain was due, almost exclusively, to increases in cargo arriving from overseas ports which rose 8.0%. The growth in cargo shipped to overseas ports rose marginally from 110.2Mt in 2003 to 112.3Mt in 2004.

The growth in inbound overseas cargo was fueled by a second consecutive year of record shipments of crude petroleum. In 2004, inbound crude petroleum grew to reach 37.0Mt up from 33.5Mt reported a year earlier. The majority of the crude petroleum arrived from ports in Africa which surpassed Europe as the primary source of

overseas crude petroleum. Also contributing to the overall rise in cargo arriving from overseas ports was a sharp increase in shipments of iron and steel (primary or semi-finished) which rebounded 42.2% (up 1.0Mt).

A combination of sharp increases coupled with equally strong declines in several commodities resulted in an overall slight increase in cargo destined for foreign ports. Outbound shipments of grains<sup>4</sup> rose 3.3Mt to reach 17.7Mt. This growth was due, almost exclusively, to a surge in shipments of wheat to Asia which more than doubled to 6.1Mt up 3.4Mt from 2.7Mt in 2003. Also, destined primarily to ports in Asia, were increased shipments of potash up 1.2Mt to 6.8Mt and sulphur up 0.9Mt to 6.4Mt. These gains were sufficient to offset declines in several commodities, most notably iron ore and concentrates and coal. Labour disputes at two mining companies resulted in a sharp drop of 3.9Mt (down 18.0%) in overseas shipments of iron ore and concentrates which fell to 17.8Mt. In particular, cargo destined for Europe plunged 2.8Mt (down 19.1%) to 11.8Mt, its lowest levels in since 1988. Outbound shipments of coal were also reduced in 2004 falling 1.0Mt (down 4.0%) to 24.5Mt.

The amount of cargo handled by Canadian-flag vessels which was exchanged with overseas ports held steady at 0.1%. Ships registered to the following countries Panama (20.2%), Greece (10.4%) and Liberia (9.3%) continued to handle the majority of the overseas cargo.

## Domestic Cargo

In 2004, Canada's ports and terminals handled 137.8Mt of domestic cargo, essentially unchanged from the levels reported a year earlier. While the majority of commodities experienced positive growth in the amount of domestic cargo handled, there were a few significant exceptions. Leading the pack of declines was crude petroleum which tumbled 4.5 Mt to 35.6Mt. Output of oil from the fields off the Grand Banks fell from a record 123.0 million barrels in 2003 to 115.0 million barrels<sup>5</sup> in 2004, the first decline in output since production began in 1999. The impact of the drop in domestic shipments of crude petroleum in 2004 was centered primarily at several ports in the Atlantic region, specifically Come by Chance (down 10.8%) and Saint John (down 41.2%), where the majority of the crude produced domestically is handled. Other commodities which exhibited large decreases in domestic shipments included wheat and newsprint. Most notable among those commodities whose domestic tonnage increased were stone, sand, gravel and crushed stone (up 1.5Mt to 6.9Mt) and limestone (up 1.3Mt to 8.3Mt).

Despite lengthy strikes at two of the region's three iron ore mining operations, domestic shipments in the St. Lawrence Region continued to trend upward in 2004, rising 0.8Mt to 26.6Mt. Domestic activity in the region is heavily influenced by shipments of iron ore and concentrates which account for 25.2% of the region's shipments. Increases in domestic cargo shipped through Port Cartier (up 0.8Mt to 5.1Mt) and Montréal (up 0.6Mt to 5.1Mt) were sufficient to overcome the decline in shipments at Sept-Îles (down 1.3Mt to 2.3Mt).

After back to back declines in the two previous years, shipping activity in the Great Lakes rebounded in 2004 to reach 31.0Mt, up 2.7Mt from 2003. The majority of the increase was attributed to an increase in shipments of stone, sand, gravel and crushed stone which climbed 1.7Mt to 3.6Mt.

In 2004, the level of domestic activity occurring in the Pacific region improved slightly, rising 1.3% to reach 32.4Mt. Increased shipments of limestone (up 1.0Mt to 2.8Mt) mostly offset declines in newsprint (down 0.7Mt to 1.1Mt). Canadian newsprint production continued to be hampered by a number of factors including sluggish demand, primarily from the United States, and the impact of a higher Canadian dollar. As a result, several newsprint producers in Canada revealed their intentions to substantially scale back production in the face of such economic conditions

4. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains.

5. Newfoundland and Labrador oil figures were taken from data obtained from the Canada-Newfoundland Offshore Petroleum Board, April 2006

## Canadian port traffic

Nineteen Canadian Port Authorities<sup>6</sup> (CPAs) were created under the Canada Marine Act of 1998 based on their potential to be financially self-sufficient. In 2004, the 19 CPAs accounted for 59.7% of the total international and 36.2% of the total domestic cargo handled by Canadian ports and marine terminals.<sup>7</sup>

Shipments of marine cargo from the Port of Vancouver were 75.0Mt, up 7.1 Mt from 2003. This rise in shipments, the port's largest since 1987, was spurred by increased demand from Asia, primarily the Peoples Republic of China. For the second consecutive year the overall growth in cargo handled was led by grains<sup>8</sup> which surged upward 2.0Mt to 8.6Mt. Increased shipments of wheat accounted for most of the gain rising 1.7Mt to 5.1Mt. In addition, impressive gains were noted in the amounts handled by the port of potash (up1.3Mt to a record 5.9Mt) and sulphur (up1.0Mt to 6.4Mt). Demand for both these commodities is heavily influenced by the production of fertilizers for which they are key ingredients.

Vancouver remained the nations leading container port handling 1,665,000 TEUs surpassing the record 1,539,000 TEUs set a year earlier. Burgeoning trade with Asia resulted in the port handling 45% of the nation's container traffic. Overall, the level of containerized cargo reached 13.3Mt, up 1.4Mt from 2003. The gain was primarily due to increases in outbound containerized wood pulp and lumber, which rose 19.4% and 15.1% respectively. Also contributing to the rise in containerized cargo were increased inbound shipments of other manufactured and miscellaneous goods which rose 6.0%.

The tonnage handled at the port of Saint John, New Brunswick, remained essentially flat at 26.2Mt. The port experienced sharp drops in fuel oils (down 0.6Mt to 4.8Mt), other refined petroleum and coal products (down 0.2Mt to 0.2Mt) and potash (down 0.1Mt to 0.7Mt). Offsetting these declines were increases in crude petroleum (up 0.7Mt to 13.1Mt) and gasoline and aviation turbine fuel (up 0.3Mt to 5.6Mt). Although the overall level of shipments of crude petroleum increased, the proportion derived from the domestic market plummeted from 2.2Mt in 2003 to 1.3Mt in 2004 in response to the drop in production from the oilfields in Newfoundland .

In 2004, the port of Montréal/Contrecoeur handled 23.3Mt (up 3.0Mt) of cargo, its highest level of shipments since 1984. The gain resulted, in large part, from sharp increases in shipments of iron ore and concentrates (up 0.8Mt to 2.0Mt), petroleum products<sup>9</sup> (up 0.5Mt to 5.0Mt), other basic chemicals (up 0.3Mt to 1.5Mt) and salt (up 0.2Mt to 0.8Mt) which were more than sufficient to counteract the drop in fertilizers (excluding potash) (down 0.1Mt to 0.4Mt). The volume of international containers handled continued to grow as the port handled a record 1,146,000 TEUs in 2004 compared with 1,021,000 TEUs in 2003. In 2004, containerized cargo accounted for 10.5Mt of the shipments either destined for or arriving from foreign ports.

Total shipments at Québec (including Lévis) reached a record 21.7Mt in 2004, up 6.3% from the previous year. Since 2001, the total cargo handled at the port has risen 6.5 Mt, (up 42.7%) boosted primarily by higher levels of international shipments. In 2004, the increase in international cargo (up 7.4%) was primarily due to a rise in shipments of iron ores and concentrates, coal and fuel oils. Domestic cargo rose slightly (up 2.1%) as gains in several commodities including metallic waste and scrap, wheat and other refined petroleum and coal products offset sharp declines in crude petroleum and gasoline and aviation turbine fuel.

The tonnage handled at Sept-Îles (including Pointe-Noire) plummeted to 17.0Mt from 22.7Mt in 2003. The port experienced declines in shipments of both international and domestic cargo, which fell 4.4Mt (to 14.7Mt) and 1.3Mt (to 2.3Mt) respectively. Activity at the port was severely impacted by prolonged labour disputes at both Iron Ore Company of Canada and Wabush Mines, of 10 weeks and 14 weeks respectively. As a result, shipments of iron ore and concentrates fell 26.7% to 15.2Mt, their lowest levels since 1982.

---

6. Vancouver, Saint John, Montréal, Sept-Îles, Québec, Halifax, Prince Rupert, Hamilton, Fraser River, Thunder Bay, Windsor, Ont., Belledune, Trois-Rivières, Nanaimo, Toronto, Saguenay(Chicoutimi), Port Alberni, St.John's, North Fraser River.

7. The quantity of cargo reported to Statistics Canada may vary, in some cases quite significantly, from the statistics reported by individual port authorities due to differences in coverage and information sources. Users should consult the section on Survey Methodology and Data Quality for further information.

8. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains

9. Petroleum products includes fuels oils, gasoline and aviation turbine fuel, coal coke and petroleum coke and other refined petroleum and coal products

A total of 14.9Mt of cargo was handled at Fraser River Port in 2004, up from 13.3Mt in 2003. Increased levels of both domestic and international cargo contributed to the growth. Among the major domestic commodities handled at the port, only shipments of newsprint and coal declined. The amount of international activity, in particular, the levels of containerized cargo at the port continued to trend upward. The port handled 321,000 TEU's surpassing the previous year's record of 264,000 TEU's. The volume of containerized tonnage rose 25.7% (up 0.6Mt) to reach 2.8Mt

The amount of cargo handled at the port of Halifax held steady at 14.2Mt, as domestic activity decreased slightly while international cargo remained virtually unchanged. Crude petroleum remains the largest commodity handled at the port, 3.8Mt in 2004. The decline in domestic cargo (down 4.6% to 2.9Mt), was due almost exclusively to a 27.4% drop in inbound shipments of domestic crude petroleum. This decline was offset by an increase in international inbound shipments of crude petroleum from South America and Europe. Halifax retained its position as the third busiest container port in the country despite a decline in container traffic, which fell to 492,000 TEUs in 2004 from 499,000 TEUs in 2003.

Cargo handled at Hamilton rose 1.1Mt to reach 11.9Mt in 2004, a manifestation of the improved conditions affecting the steel industry. Increased world demand for steel, primarily from the People's Republic of China, led to a rise in prices and production of steel. At the port, these changes were reflected in shipments of iron ore and concentrates and coal which are primary inputs in the production of steel. The tonnage of inbound international shipments of iron and steel (primary or semi-finished) rose 0.2Mt (to 1.0Mt). Further, inward shipments of iron ore and concentrates registered a net gain (up 0.6Mt) as a rise in cargo from the United States-Great Lakes more than offset a decline from Sept-Îles (including Pointe Noire). In addition, inbound domestic shipments of coal also increased 41% to 0.5Mt.

After declining in each of the two previous years, the total tonnage handled at the port of Thunder Bay rebounded in 2004 to reach 8.5Mt. The turnaround was sparked by an increase in shipments of colza seed (canola) which pushed the overall tonnage of grains<sup>10</sup> to 5.1Mt. Other commodities which experienced increases include potash, which achieved its highest levels since 1998, and fresh, chilled or dried vegetables. These gains were sufficient to overcome a sharp decline (down 0.2Mt to 0.4Mt) of other oilseeds and nuts and other agricultural products.

In 2004, the amount of cargo handled at the port of Windsor (Ontario) began to show signs of recovery rising 0.5Mt to reach 4.8Mt. Higher shipments of both domestic (up 0.3Mt to 2.2Mt) and international cargo (up 0.2 to 2.7Mt) each contributed to the gain. Leading the upturn in domestic shipments were increased shipments of both colza seeds (canola) and stone, sand, gravel and crushed stone which each rose 0.2Mt. The slight rise in international cargo (up 0.2Mt to 2.7Mt) was due primarily to increased inbound shipments of iron and steel (primary or semi-finished) from Europe and Africa in addition to limestone from the United States-Great Lakes.

The total tonnage reported for the North Arm Fraser River port dropped 2.7% to 4.6Mt from 4.7Mt in 2003, all of which was domestic traffic. The three main commodities handled at the port were logs and other wood in the rough (2.4Mt), wood chips (1.5Mt) and stone, sand, gravel and crushed stone (0.5Mt). The North Fraser River is the major port for tug and barge and log boom traffic on the Pacific coast. Some of this traffic is loaded and unloaded within the port while some of it is transported through the port to other points on the Fraser River. There are significant differences between the statistics reported by the North Fraser Port Authority and this publication.<sup>11</sup>

In 2004, the port of Prince Rupert posted an increase in overall tonnage handled as the level of shipments reached 4.4Mt, up from 4.0Mt in 2003. Owing to the closure of the Bullmoose mine, which reached the end of its 20 year expected lifespan, no coal was shipped from the port in 2004. This resulted in an overall reduction of 1.7Mt in cargo handled. Despite this, activity at the port benefited from a surge in outbound shipments of wheat and barley which each more than doubled to reach 2.9Mt and 0.3Mt respectively. In addition, the port handled an increasing amount (0.3Mt) of iron ore and concentrates arriving from Minnesota destined for Asia.

After falling to 1.8Mt in 2003, the level of shipments at Trois Rivières bounced back to reach 2.4Mt in 2004. Both international and domestic shipments rose, 0.3Mt and 0.2Mt respectively, primarily on the strength of increased

10. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains

11. These differences are due to differences in the coverage (e.g. Statistics Canada's survey is a threshold survey that may exclude some traffic operating on the river), survey definitions (Statistics Canada survey counts cargo that is actually loaded onto or unloaded off from a marine conveyance within the port) and differences in the levels of response from the marine community.

transshipments<sup>12</sup> of sugar (up 537.3% to 0.3Mt). In addition to alumina, the main commodity handled at the port, other commodities which recorded gains were coal and other non-metallic mineral products. Although shipments of grains<sup>13</sup> rose substantially in 2004 (up 26.2% from 2003) the cargo handled remains far below the historical ten year average of 0.4Mt. Among those commodities where tonnages fell, the most noteworthy were coal coke and petroleum coke, other non-metallic minerals and fertilizers (excluding potash).

Slight increases in the level of international and domestic cargo resulted in the port of Nanaimo handling a total of 2.2Mt in 2004 up from 2.1Mt in 2003. With the exception of wood pulp, which experienced a decrease in tonnage handled, shipments of the ports other major commodities, logs and other wood in the rough and wood chips, all increased.

The amount of cargo handled at Belledune dropped to 2.1Mt in 2004 from the 2.2 in 2003. The fall was due to lowered shipments of other metallic ores and concentrates and coal which were each down 0.1Mt. Together these commodities accounted for 66.8% of the total tonnage at the port. The port handled 1.9Mt of international and 0.2Mt of domestic cargo in 2004.

Tonnage handled at Toronto continued to climb in 2004 reaching 2.0Mt, its highest level of shipments since 1980. For a second consecutive year the increase in total cargo handled (up 0.2Mt from 1.8Mt in 2003) was driven by the growth in domestic activity. In particular, there were substantial increases in the amount of stone, sand, gravel and crushed stone (up 986.4% to 0.2Mt) and sugar (up 177.1% to 0.3Mt) shipped domestically. In contrast, international activity continued to decline, falling a further 1.7% (to 0.7Mt) from the levels reported the year earlier.

At St. John's, Newfoundland and Labrador, the total cargo handled reached 1.6Mt exceeding the record 1.5Mt set in 2003. Domestic shipments, which account for the majority of the activity at the port, rose 4.2 % (to 1.6Mt) on the strength of increased shipments of manufactured and miscellaneous goods, fuels and basic chemicals and agriculture and food products.

The port of Port Alberni handled 694 kilotonnes of cargo in 2004 as compared to 701 kilotonnes the year previous. The transportation of commodities from the forest and wood products industry, specifically logs and other wood in the rough and lumber accounted for all the traffic at the port.

The total amount of cargo handled at Saguenay Port (Chicoutimi) was 391 kilotonnes in 2004 down from 462 kilotonnes in 2003. Decreases in both international (down 19.2%) and domestic shipments (down 5.5%) were responsible for the decline. The reduction in international activity was due, almost exclusively, to the closure of a newsprint mill in late 2003.

---

<sup>12</sup>. *Transshipped cargo is cargo that is unloaded from a vessel at a port and reloaded on to another vessel. It is therefore handled twice by the same port, sometimes after a period of storage.*

<sup>13</sup>. *Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains.*

Metallic waste and scrap	18.6	14.4	68.8	114.0
Non-metallic waste and scrap	4.3	3.7	166.5	166.8
Other manufactured and miscellaneous goods	3,960.2	4,502.8	4,128.9	4,698.7
Mixed loads or unidentified freight or cargo	50.5	129.6	67.3	191.3

# Data quality, concepts and methodology

---

## Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey Number 2751) and the Marine International Freight Origin Destination Survey (Survey Number 2791).<sup>1</sup> The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

## Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

## Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

---

1. For more information see *Coastwise Shipping Survey*: [www.statcan.ca/english/sdds/2751.htm](http://www.statcan.ca/english/sdds/2751.htm) and *International Freight Origin Destination Survey*: [www.statcan.ca/english/sdds/2791.htm](http://www.statcan.ca/english/sdds/2791.htm).

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

## Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, shipping lines or port authorities send equivalent reports to Statistics Canada. Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

## Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

---

## Glossary

### Terms related to reporting forms

**A6 General declaration:** A6 General Declaration: This is an administrative document which is submitted along with supporting cargo reports to Canada Border Services Agency (CBSA) for every vessel arriving from or departing for any port or place outside Canada. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

**S.4 Towboat and ferry operators shipping report:** This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

**S.1 Domestic shipping report:** This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

### Terms related to cargo

**Ballast movement (arrival or departure):** An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

**Commodity:** Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

**Lightering:** This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

**In-transit cargo:** Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

### Terms related to ports

**Destination:** The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

**Origin:** The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

**Handling port:** The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

**Atlantic region:** This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

**Great Lakes region:** This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

**Pacific region:** This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

**St. Lawrence River region:** This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

### Terms related to vessels

**Gross register tonnage:** The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

**Net register tonnage:** The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

**In ballast:** A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

**LO LO:** an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

**RO RO:** An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
