### Accessing and ordering information

This product, catalogue no. 62-001-XIE, is available for free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select Publications.

This product, catalogue no. 62-001-XPE, is also available as a standard printed publication at a price of CAN\$12.00 per issue and CAN\$111.00 for a one-year subscription.

The following additional shipping charges apply for delivery outside Canada:

United States a single issue at a price of CAN\$6.00 and annual subscription at a price of CAN\$72.00.

Other countries a single issue at a price of CAN\$10.00 and annual subscription at a price of CAN\$120.00.

All prices exclude sales taxes.

The printed version of this publication can be ordered by

- · Phone (Canada and United States) 1-800-267-6677
- Fax (Canada and United States) 1-877-287-4369
- E-mail infostats@statcan.ca

### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

### **User information**

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

#### **Note on CANSIM**

Most of the data published in **The Consumer Price Index** (catalogue no. 62-001-X) is also available in machine readable form through *CANSIM* (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. For further information on *CANSIM* call 613-951-8200 or write to Electronic Data Marketing Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

Data that appears in this publication are also available electronically in our CANSIM database through the Internet tables 326-0020, 326-0021, 326-0009, 326-0012, 326-0015, at a cost of \$3.00 per series.

### **Highlights**

• Consumer prices rose by 2.2% in June 2007 compared with June 2006, identical to increases in both April and May. The Bank of Canada's core index rose 2.5%, faster than the 2.2% rise observed in May. On a monthly basis, the all-items index dropped 0.2% while the core index remained unchanged.

Chart 1
Percentage change in the consumer price index and major components (not seasonally adjusted) from the same month of the previous year, Canada

### **Analysis**

Consumer prices rose by 2.2% in June 2007 compared with June 2006, an increase identical to that posted in April and May.

For the third straight month, the costs associated with owned accommodation (+4.9%) accounted for much of the growth in average prices. To a lesser extent, the costs associated with motor vehicle operation (+2.8%) also played a role in this increase. Conversely, falling prices for computer equipment and supplies moderated the rise in average prices.

The all-items index without energy rose by 2.2% in June 2007 compared with the same month of the previous year, an increase slightly higher than that observed in May (+2.1%).

The Bank of Canada's core index rose 2.5% from June 2006 to June 2007 compared with 2.2% in May. The rise in homeowners' replacement cost accounted for most of this increase. This index is used by the Bank of Canada to monitor the inflation control target. The increase in this index has been over 2.0% for the past year.

On a monthly basis, the all-items index was down 0.2% between May and June 2007 after rising 0.4% the previous month. The downturn observed was largely tied to the decrease in gasoline prices. Falling prices for women's and men's clothing were also significant factors in this decrease.

Both the all-items index without energy and the core index remained unchanged between May and June 2007 following increases of 0.3% the previous month.

### Twelve-month change: Higher costs for owned accommodation and motor vehicle operation drive growth

Prices for consumer goods and services rose by 2.2% between June 2006 and June 2007, an identical rate of increase to what was posted in the past two months. The rise in the CPI was essentially supported by the strength of costs associated with owned accommodation combined with the rise in the costs of operating motor vehicles.

The rise in prices for restaurant meals also contributed to the 12-month increase. The drop in prices for computer equipment and supplies, video equipment and men's and women's clothing dampened these increases to some extent.

For a third straight month, costs associated with owned accommodation accounted for most of the increase in prices over 12 months. Between June 2006 and June 2007, mortgage interest cost increased 5.7%. This follows an identical 12-month advance in April and May. An increase of such magnitude had not been observed since January 2001. For the past several months, the growth in new house prices has been driving the sustained increase in mortgage interest cost.

Homeowners' replacement cost was the second most important contributor to the increase in the CPI in June. This component, which represents the worn-out structural portion of housing and is estimated using new housing prices (excluding land), rose by 6.1% in June 2007 compared with June 2006. This was up slightly from the 6.0% increase observed in May. This minor upswing in the rate of growth for this component follows on seven months of slowdown. June's increase was less than the average change posted since early 2007 (+6.8%).

Drivers saw a 2.8% rise in the cost of operating their vehicles between June 2006 and June 2007. This growth came partly from higher gasoline prices compared to year earlier levels, although the rise has tapered off somewhat. In June, they were only 1.7% higher than June 2006, compared with 5.8% in May. To a lesser extent, automotive vehicle parts, maintenance and repairs (+4.0%) also contributed to the change in vehicle operating costs.

In June, consumers had to spend 2.3% more for restaurant meals and 3.4% more for food bought in grocery stores. The increase in prices for food purchased in stores could be largely attributed to meat (+4.6%) and dairy products (+3.7%).

The growth in these components was partly offset by the downward trend in prices for computer equipment and supplies (-17.3%) and video equipment (-9.5%).

Consumers also had to spend less for their clothing. Prices for men's clothing were down by 2.7% and for women's clothing by 2.1%.

# Residents of Alberta and Saskatchewan were more affected by price increases than those of other provinces

Although consumer prices were up in all provinces and territories between June 2006 and June 2007, only Alberta (+6.3%) and Saskatchewan (+3.2%) posted increases higher than the national average (+2.2%). In Alberta, the growth in consumer prices has been higher than the national average since September 2005, while in Saskatchewan, the growth has been higher than the average for the past three months. In both Alberta and Saskatchewan, the increase in prices can largely be accounted for by costs for owned accommodation. Pushed up by the increase in new house prices, the growth in homeowners replacement cost in Saskatchewan (+31.8%) surpassed that of Alberta (23.6%) for the first time since September 2005. Owned accommodation (+12.7%) also made a significant contribution to the growth of the CPI in Saskatchewan between June 2006 and June 2007. The growth in prices in the real estate sector in Saskatchewan was sustained by the growth in the employment rate for the segment of the population over the age of 15 in that province. Growth in employment rate in Saskatchewan surpassed the national average from August 2006 to May 2007.

The most moderate growth in prices during this period was observed in Newfoundland-and-Labrador (+1.4%). This change is nonetheless considerable in light of the 0.7% increase posted in May. The cost of owned accommodation (+2.6%) and gasoline (+3.3%) contributed to most of the rise in the CPI in that province.

The increases in the CPI in Quebec (+1.5%) and British Columbia (+1.5%) were lower than the national average.

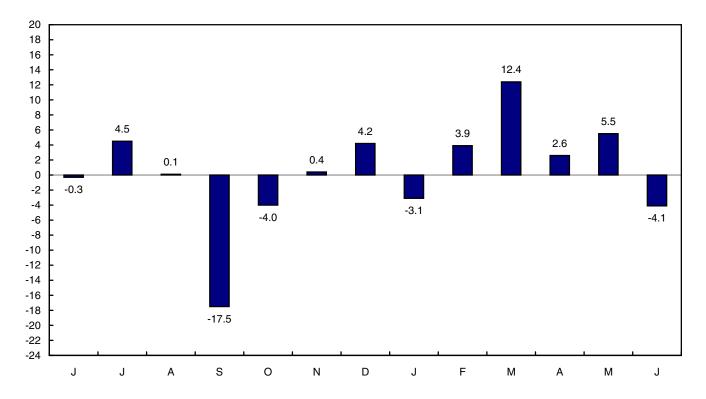

### From May to June 2007: gasoline prices remain the main contributor to the change in the CPI

Prices for consumer goods and services were down by 0.2% between May and June 2007. This is the first monthly decrease in the all-item index since October 2006. This decrease can largely be attributed to falling gasoline prices.

Gasoline prices dropped 4.1% in June, after being the main contributor to the rise in the CPI between April and May. A downturn of this magnitude had not been recorded since October 2006. The downturn in gasoline prices observed in June can partly be explained by the recovery in capacity utilization rates at refineries following completion of the maintenance tasks that had affected supply in May. The rise in stocks, although still below the average level of the past five years, also contributed to the decline in gasoline prices. The reduction of retailers' margins and the settlement of a labour dispute in Nigeria also had an influence.

Chart 1
Percentage Change in the Gasoline Index from the Previous Month, Canada

percentage change

A 4.0% slide in the clothing component between May and June 2007 also contributed to the monthly decrease in the CPI. Prices for women's clothing declined by 4.3% and for men's clothing by 4.5% during this period. Such changes are common in June given that retailers generally hold promotional sales to stimulate sales and reduce their inventories in order to make room for the collections of the following season.

Canadian consumers also had an opportunity to purchase vehicles at lower prices in June than in May 2007. Dealers offered discounts in order to reduce their inventories and make room for the 2008 models.

Energy costs associated with housing dampened the decline in the CPI between May and June 2007. During this period, on average, Canadians saw the average price of natural gas rise by 3.9%. This growth was particularly pronounced in Alberta. Electricity prices rose 1.6%, the largest increase since November 2006.

Again with respect to housing, homeowners' replacement costs climbed by 0.8% on a monthly basis. This is the largest monthly increase observed since September 2006.

#### Twelve-month change: The core index increases

The core index is obtained by removing the effect of the changes in indirect taxes from the all-items CPI from which the eight most volatile components identified by the Bank of Canada have been excluded. These volatile components are fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; heating oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies.

The 12-month increase in the core index as defined by the Bank of Canada was 2.5% in June 2007, up from the 2.2% rise reported in May. The growth in this index has been more than 2.0% since July 2006. In June, the increase came primarily from homeowners' replacement cost.

On a monthly basis, this index remained stable, down from the 0.3% growth of the previous month.

### **Energy: The influence of gasoline prices dominates**

The growth in the energy products index was 1.2% in June 2007 compared to June 2006. This increase comes after a 1.6% upturn in May in the wake of virtual stagnation in April (+0.1%). The rise in June was largely related to changes in gasoline prices (+1.7%). To a lesser extent, electricity (+0.8%) and fuel, parts and supplies for recreational vehicles (+4.0%) also contributed to the rise in this index. The drop in prices for heating oil and other fuels (-2.9%) moderated the growth in this index.

The energy index dropped by 1.3% between May and June 2007, in contrast with a 2.1% increase between April and May 2007. This was the first monthly decrease recorded since January 2007 and it can largely be attributed to falling gasoline prices (-4.1%). To a lesser extent, the 2.0% decrease in prices for fuel, parts and supplies for recreational vehicles also had a downward impact on the energy index. The magnitude of this decrease more than offset the effect of the 3.9% rise in natural gas prices combined with the 1.6% rise in electricity prices.

## Year-over-year, influenced by costs for owned accommodation, the services price index grew more than that of goods

Prices for services rose an average of 3.3% between June 2006 and June 2007. This growth was largely driven by the rise in mortgage interest cost (+5.7%) and homeowners' replacement cost (+6.1%).

Between May and June 2007, prices for services rose by 0.3%, the slowest growth in this aggregate over the past four months.

The goods index rose by 0.9% in June 2007 in relation to June 2006, down slightly from the 1.1% increase observed the previous month. Higher prices for non-durable goods (+2.2%) more than offset the decrease in prices for semi-durable goods (-1.1%) and durable goods (-0.5%).

The growth in prices for non-durable goods came essentially from the rise in food purchased in stores. If this component were excluded, the rise in non-durable goods would have been only 1.3% and that of the goods index 0.2%. Meat (+4.6%) accounted for most of the rise in prices for foods purchased at grocery stores. The 1.7% rise in gasoline prices also exerted upward pressure on this index.

The drop in average prices for semi-durable goods (-1.1%) nonetheless offset the rise in the goods index. The decrease in prices for computer equipment and supplies (-17.3%) combined with that for video equipment (-9.5%) accounted for most of this decrease.

The goods index dropped by 0.6% between May and June 2007, putting an end to six straight months of increase in this index. Decreases were more substantial for semi-durable goods (-2.3%) than for non-durable goods (-0.3%) and durable goods (-0.2%). The drop in prices for semi-durable goods can be explained by lower prices for men's clothing (-4.5%) and women's clothing (-4.3%).

### The seasonally adjusted CPI remained constant between May and June

The rise of five of the eight main components was completely offset by the decline of the three other components. The all-items thus remained constant between May and June 2007. The main upward contributor is shelter (+0.7%). At a lesser extent, the growth in indexes for health and personal care (+0.5%), alcoholic beverages and tobacco products (+0.5%), and recreation, education and reading (+0.3%), and household operations and furnishings (+0.2%) also had an upward influence on the seasonally adjusted all-items index in June. The decline in prices for clothing and

footwear (-1.6%), transportation (-1.2%), and food (-0.2%) completely offset the upward pressure exerted coming from the other components.

The seasonally adjusted core index as established by the Bank of Canada was up by 0.2% between May and June 2007.

## **Concepts and methods**

#### **Definition**

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

#### Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

#### Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

#### Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

#### Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

#### Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, **i.e.** the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see the **Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Prices Division.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. http://www.bankofcanada.ca/en/inflation/index.htm.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Text table 1 Comparison of the 2005 and 2001 distribution<sup>1</sup> of expenditures used in the Consumer Price Index, by major component, for Canada

|   | 2005 Expenditu           | 2001 Expenditures                 |                                   |

| Health and personal care                        | 4.8                      | 4.7                               | 4.4                               |
| Recreation, education and reading               | 13.0                     | 12.2                              | 11.2                              |
| Alcoholic beverages and tobacco products        | 3.1                      | 3.1                               | 4.2                               |

<sup>1.</sup> Figures may not add to 100% due to rounding.

#### Whitehorse, Yellowknife and Igaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the All-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

#### Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre All-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's All-items index.

#### Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for All-items, core consumer price index (CPI), each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

## **Explanatory notes for tables**

#### Table 1— The Consumer Price Index and major components, Canada

- 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
- 2. Figures may not add to 100% due to rounding.
- 3. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.

#### Table 2— The Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit

- 1. Not seasonally adjusted.
- 2. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

# Table 3— The Consumer Price Index and major components, selected sub-groups and special aggregates, Canada

Tables 3-3, 3-4, 3-5, 3-6, 3-8

Not seasonally adjusted.

#### Table 3-1

- 1. Not seasonally adjusted.
- 2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compare to all other components.

#### Table 3-2

- 1. Not seasonally adjusted.
- In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
- 3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.ca.

#### Table 3-7

- 1. Not seasonally adjusted.
- 2. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

#### Table 3-9

- 1. Not seasonally adjusted.
- 2. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
- 3. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
- 4. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

#### Table 4— The Consumer Price Index for Canada, all-items, historical data

- 1. Not seasonally adjusted.
- 2. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

## Table 5— The Consumer Price Index for Canada major components and special aggregates, historical data

- 1. Not seasonally adjusted.
- 2. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
- 3. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- 5. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

#### Table 6— The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces and territories

#### Tables 6-1 to 6-5 and 6-7 to 6-11

- Not seasonally adjusted.
- 2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compare to all other components.
- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

#### Table 6-6

- Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compare to all other components.
- Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.ca.

However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compare to all other components.

4. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.

## Table 7— The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, historical data

- Not seasonally adjusted.
- 2. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
- 3. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

# Table 8— The Consumer Price Index and selected sub-groups, by urban centre Table 9— The all-items Consumer Price Index by urban centre, historical data

- 1. Not seasonally adjusted.
- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

#### Table 11— Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

#### Average retail prices for food, household supplies, personal care items and cigarettes

Table 11 shows, for the current month and the two previous months, average prices for selected food, household supply and personal care items and for cigarettes.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

#### Table 12— Inter-city indexes of retail price differentials, as of October 2005, for selected groups of consumer goods and services

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

Price data for the current inter-city retail price comparison was drawn to a large extent from the extensive volume of price information collected for the production of the Consumer Price Index (CPI) for October 2004. To obtain the October 2005 comparison, October 2004 prices for each product category, were adjusted using the CPI to reflect the price movements over the year ending in October 2005.

Reliable inter-city price comparisons require that the sampled commodities be identical in different locations. This ensures that variations in index levels between cities, are due to price differences and not to differences in product attributes. In order to optimize comparability, price comparisons were initially made by pairing cities that are geographically close. This resulted in the following pairings:

St. John's Halifax Charlottetown-Summerside Halifax Halifax Saint John Ottawa Halifax Toronto Montreal Ottawa Toronto Toronto Winnipeg Regina Winnipeg Edmonton Winnipeg Edmonton Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical detailed descriptions, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practices.

Price level comparisons can be extended to include any pair of cities using a chaining procedure.

The weights used for aggregating the various components of the city indexes to obtain the All-items index are based on the expenditure proportions of the consumers living in the 11 cities overall. The weights are currently based on 1996 consumer expenditure data and price updated to October 2001. The base, for which the index is equal to 100, is also the combined city average. Therefore, an index value of 102 means that prices in that city are 2 percent higher than the combined city average.

It should be noted, especially in periods when prices are highly volatile, that the timing of price comparison and the relative rate of price change occurring in each location could significantly affect city-to-city retail price relationships. Furthermore, since the retail prices used in this study are final prices faced by consumers, they include applicable sales and excise taxes. Therefore, provincial sales tax rates in effect in the various cities at the time of price comparison can be of importance in explaining inter-city price differentials for items or groups of items that are subject to such taxes.

Shelter, as an expenditure category, was absent from the Intercity index program prior to 1999 because of methodological and conceptual issues associated with its measurement. For many products, adjusting for quality differences to ensure comparability across areas is relatively straightforward and can be done using traditional quality adjustment techniques. In the case of shelter however, its very diverse nature means that comparable matches across cities are difficult to make. Hedonic regression methods were used to adjust for quality differences among cities and produce more reliable inter-city comparisons of rental prices.

A rental equivalence approach is used to construct the inter-city price indexes for shelter services consumed by homeowners. Such an approach uses market rents as an approximation of the cost of shelter services faced by homeowners. This approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-ofpocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities. Furthermore, since the observed rents used in this index are those faced by existing renters and since the industry is regulated, they may not be indicative of rental prices faced by new renters.

#### Footnotes for table 12

- The weights shown are rounded 1996 basket weights at December 1997 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price change since October 2001.
- 2. Includes the following sub-groups: sugar and syrups, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
