Note on CANSIM

CANSIM (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM. For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call 613-951-8200.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

Charts

1. Prices for manufactured goods increase	7
2. Raw materials prices are back up	8

Highlights

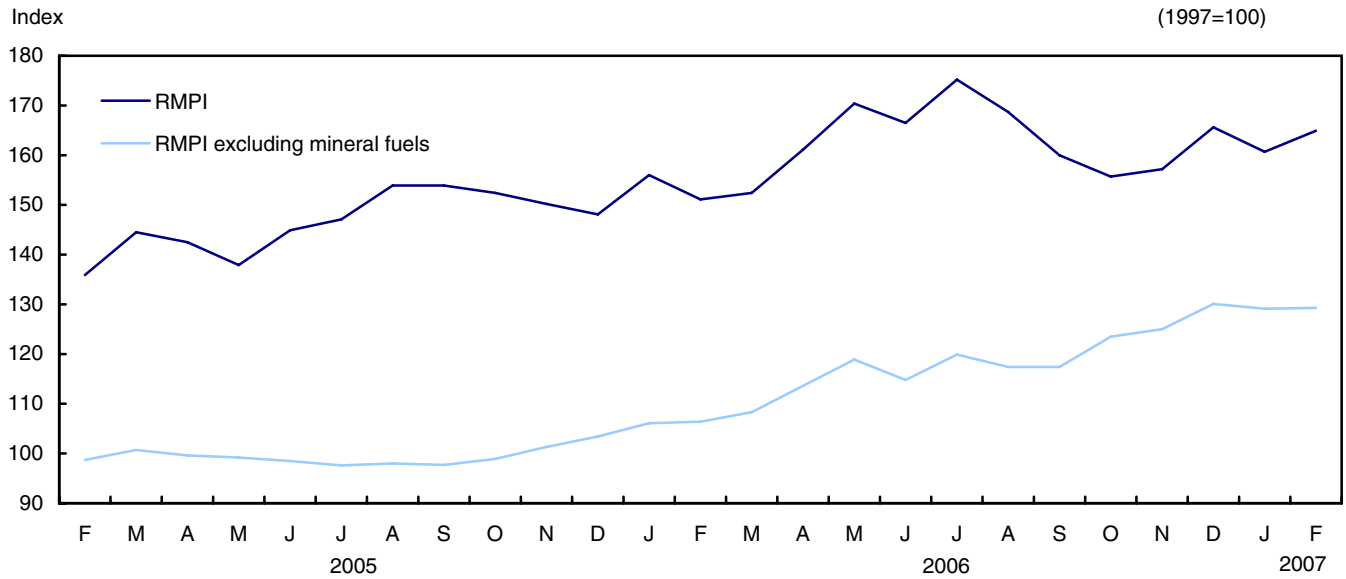

- Energy prices were the main factor pushing up the prices for manufactured goods and raw materials in February.
- From January to February, prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), registered a fifth consecutive monthly increase. The 0.9% rise in the index basically reflects the strength of prices for petroleum and coal products and primary metal products.

Chart 1
Prices for manufactured goods increase

- On a twelve-month basis, the IPPI rose by 4.4%, comparable to the year-over-year increase observed in July 2006 (+4.6%), which constituted a peak for 2005 and 2006. The upward pressure came largely from higher prices for primary metal products and, to a lesser extent, pulp and paper products and petroleum and coal products. The upward movement was slowed by a drop in the prices for lumber and other wood products.
- From January to February, the Raw Materials Price Index (RMPI) rose by 2.6%, a rate intermediate between those recorded for December and January. The month-over-month increase in the index is mainly attributable to the appreciation of mineral fuels. All raw material groups posted gains, except for non-ferrous metals.
- Compared to February of last year, raw materials cost plants 9.1% more, a rate of increase that once again lies between those for December and January. Unlike the rise in the index from its January level, the rise compared to February 2006 was led by non-ferrous metals and was slowed by mineral fuels.
- In February, the IPPI was 116.4 (1997=100), up from January's revised level of 115.4. The RMPI was 164.9 (1997=100), up from January's revised level of 160.7.

Analysis

IPPI: Price index pushed up by petroleum products and primary metals

Month over month, manufacturers' prices were pushed up by rebounding prices for petroleum and coal products (+4.6%) and primary metal products (+2.9%).

The prices for petroleum and coal products rebounded 4.6% in February, following the 3.9% drop registered in January and the 4.6% rise in December. In February, prices for petroleum products were boosted by a reduction in the activity of some refineries; however, prices for petroleum and coal products were 16.5% lower than the peak reached in July 2006. If the prices for petroleum and coal products had been excluded, the IPPI would have increased by 0.5% for a second straight month, rather than rising by 0.9%.

The prices for primary metal products increased 2.9% in February after falling 0.9% in January. Since May 2006, upward and downward movements have alternated monthly, but they have diminished over time in conjunction with the slowdown in the manufacturing and construction sectors. However, in February, the index was boosted by a surge in prices for nickel products (+16.9%) and, to a lesser extent, by the appreciation of copper and copper alloy products (+4.9%); prices for these two metals were sustained by activity in Asia, which continued to be strong. Prices for nickel continued to rise toward a new historic peak, and the level of the index for February was 73.8% higher than the average for 2006.

Other price increases were observed for chemical products (+1.2%), meat, fish and dairy products (+1.6%) and fruit, vegetables and feed products (+0.7%), but their contribution to the change in the IPPI was to a much lesser degree.

In February, the rise in the IPPI was slowed slightly by decreases in prices for motor vehicles (-0.3%) and lumber and other wood products (-0.3%).

IPPI: Primary metals remain most important factor in the twelve-month change

The IPPI was up 4.4% from February 2006 to February 2007, the highest rate of increase since the peak recorded in July 2006. The Industrial Product Price Index was boosted by rising prices for primary metals and, to a lesser extent, by increased prices for pulp and paper products, petroleum and coal products, meat, fish and dairy products, as well as fruit, vegetables and feed products. The total IPPI excluding petroleum and coal was up for a twelfth consecutive month. If the prices for petroleum and coal products had been excluded, the rise in the IPPI compared to February 2006 would have still been 4.4%.

Prices for primary metals were up 24.4% compared to February 2006. Year-over-year price increases were observed for nickel products (+159.7%), copper and copper alloy products (+28.5%), precious metal basic manufactured shapes (+65.9%), refined zinc products (+59.2%) and aluminum products (+5.8%).

The annual rate of growth in the IPPI was mitigated slightly by lower prices for lumber and other wood products (-3.7%) as well as rubber, leather and plastic fabricated products (-1.3%).

RMPI: Higher prices for crude oil and lower prices for non-ferrous metals

In February, raw material prices rose 2.6%, a rate that lies between December's 5.3% increase and January's 3.0% decrease.

Mineral fuels led the way with their prices rising 5.5%. The price for crude oil rose 6.8%, owing to the decrease in refinery output, while the price for natural gas declined 0.9% as a result of excess supply. Without mineral fuels, the RMPI would have increased 0.2% from January instead of rising 2.6%.

With the exception of non-ferrous metals, all other product groups advanced in February, notably vegetable products (+2.2%) and animals and animal products (+0.8%). Among vegetable products, grains and oilseeds continued their upward trend, with their prices increasing 3.0% in conjunction with strong demand for organic fuels. Prices for rubber and natural gums rose 9.7% after jumping 22.3% in January, pushed up by production costs. In the animals and animal products group, prices for hogs for slaughter rose 9.8% as a result of higher production costs and reduced supply.

Prices for non-ferrous metals declined 1.3% after a 5.4% drop in January. In February, the reduction in prices was almost exclusively due to lower prices for zinc concentrates (-13.7%).

On a twelve-month basis, the price of raw materials rose 9.1% in February, up from the 3.0% recorded in January but down from the 11.8% registered in December. If mineral fuels had been excluded, the RMPI would have risen by 21.5% instead of 9.1%.

Non-ferrous metals accounted for most of the twelve-month increase, with prices rising 50.7%, mainly on the strength of year-over-year increases in the prices for radioactive concentrates and concentrates of zinc, copper, nickel and lead.

Prices were also up over the previous year in the case of vegetable products (+20.0%), wood (+14.1%), animals and animal products (+3.1%) and ferrous materials (+7.9%).

However, prices for mineral fuels were down 2.5%, owing to a drop in the price for natural gas (-22.2%), while crude oil prices rose 1.7%. Year over year, natural gas prices declined for an eighth month in a row, with reserves reaching record levels.

Impact of exchange rate

The value of the Canadian dollar against the U.S. dollar rose 0.4% between January and February. Consequently, without the effect of the exchange rate, the total IPPI would have risen 1.0% instead of 0.9%.

On a twelve-month basis, the value of the Canadian dollar fell 1.9% against the U.S. dollar. If the impact of the exchange rate had been excluded, producer prices would have risen 3.9% between February 2006 and February 2007, rather than their actual increase of 4.4%.

Prices for intermediate goods increase

Prices for intermediate goods rose 1.2% from January to February. Most of the increase in the prices for intermediate goods is attributable almost exclusively to primary metal products, petroleum products and, to a lesser extent, chemical products. Other minor contributors to the increase were meat, fish and dairy products and fruit, vegetables and feed products. Price decreases were observed for lumber products and motor vehicles.

Producers of intermediate goods received 6.0% more for their products in February 2007 than in February 2006. Higher prices were observed for primary metal products, pulp and paper products, petroleum products, fruit, vegetables and feed products and meat, fish and dairy products.

A few price decreases affected this year-over-year growth, including declines for lumber products and rubber, leather and plastic products.

Finished products affected by increase in petroleum prices

Prices for finished products rose 0.6% from January to February on the strength of petroleum and coal products and, to a lesser extent, meat, fish and dairy products. However, the increase in prices for finished products was dampened by lower prices for motor vehicles.

Since February 2006, prices for finished products have risen 1.9%. Price increases were noted for petroleum and coal products, motor vehicles, tobacco products, meat, fish and dairy products, fruit, vegetables and feed products, machinery and equipment, electrical and communication products, and chemical products.

Note to readers

The **Industrial Product Price Index(IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its U.S. counterpart affects the IPPI.

The **Raw Materials Price Index(RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997. The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw Materials Price Indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (for example, metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in table 330-0006.

Historical data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential (1997 = 100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in table 329-0050. Indexes for the current year and the previous year are subject to revision.

Note(s): The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr wheress indicates the S-level commodity code (from 9 to 28)mm indicates the M-level commodity code (from 14 to 43, 45 to 69)nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special detailspppp indicates the PCGA code (except for some special aggregations which include several PCGAs)rr indicates a split of a PCGA.
