

HOUSING NOW

Regina CMA

Canada Mortgage and Housing Corporation

Date Released: First Quarter 2008

Regina starts end year up 42 per cent over 2006

At the end of the fourth quarter, Regina saw total housing starts of 1,398 units, up 42 per cent compared to the end of the fourth quarter of 2006 and the highest number of starts recorded in 21 years. Year-to-date single-detached starts were up almost 15 per cent over the year-end

in 2006. Multiple starts ended the year 125 per cent higher than seen in 2006 at the end of December.

Looking more specifically at multiple starts, apartment style condominiums saw 239 units started compared to none at the end of 2006. There were also 47 rental apartment units started. Row and semi-detached condominium housing starts were up 8.5 per cent, ending the year with 242 units started.

Figure 2

The city of Regina has captured 88 per cent of the total housing starts occurring in the Regina Census Metropolitan Area (CMA) in 2007. This is close to the city share in 2006. Notwithstanding this, the bedroom communities outside the city limits have seen a 44 per cent increase in total housing starts in 2007.

Total supply reaches 1,201 units

The total supply of units, including those in the construction stage as well as those completed and ready for sale, ended the year up 55 per cent reaching 1,201 units compared to the 777 units seen at the end of December 2006. Single unit supply increased by 41 per cent compared to the fourth quarter of 2006 and there was an 82 per cent increase in the total supply of multiples. The increase in the supply of multiple units was mainly due to the large number of apartment units under construction at the end of the last quarter of 2007.

The supply of apartment units rose to 277 units compared to 61 units at the end of the fourth quarter of 2006. The supply of row units slipped 12 per cent to 158 units compared to 180 units recorded at the end of the fourth quarter in 2006. The supply of semi-detached units at various stages of construction and completed and unoccupied units rose 92 per cent.

Most of the supply of new housing units is in the construction stage. At the end of December, the total volume of units under construction was up 65 per cent to 1,175 units compared to 711 at the end of December 2006. There was an increase of 44 per cent in the number of single units that were in the construction stage while the number of multi units in the construction stage more than doubled to 479 units.

Most of the multi-family units recorded as being under construction at the end of the quarter were apartment units totaling 277 units. The volume of row units under

construction was unchanged from the 2006 December year-end number of 156 units.

Year-to-date total absorptions down 7.4 per cent

Total absorptions for all types of housing units ended the year down 7.4 per cent compared to the same time in 2006. Single-detached absorptions were up 3.4 per cent to 641 units absorbed by the end of December 2007. Multiple absorptions were down 25 per cent at the end of the fourth quarter. Row absorptions have seen 207 row units absorbed in 2007 compared to 234 units absorbed in all of 2006. Apartment condominium absorptions were down to 57 units compared to 115 units absorbed by the end of December 2006.

Average price of new homes up 23 per cent

The average price trend for new single-family homes increased 23 per cent over the average price of units absorbed in 2006. This brings the average price to \$305,284 at the end of 2007. The average price is increasing due to rising input costs of land and labour as well as consumer demand for more costly features in their homes.

Sales of existing housing up almost 34 per cent in 2007

The Association of Regina Realtors® reports total residential sales were

Figure 3

up 33.8 per cent at the end of 2007 compared to the number of sales seen by that time in 2006. Single-detached sales were up 23.4 per cent in the same period. The total residential sales dollar volume was up 68.2 per cent from the 2006 last quarter figure.

The year-to-date average price for single-detached homes was \$175,107, up 29 per cent from the average price of \$135,861 at the end of December 2006. A portion of the gain in average price can be attributed to more sales occurring in higher price ranges.

December 2007 active listings were down sharply compared to the same month in 2006. The inventory of active residential listings in December stood at 435 units, down 28.2

per cent from one year ago. Single-detached active listings were down to 254 units in December 2007 compared to 340 in December 2006.

In December 2007, the total number of new listings processed was even with the same month in 2006. The December number for single-detached new listings was up 18.1 per cent compared to the same month in 2006. At the end of 2007, the Association had processed 4.661 residential listings, up 11 per cent from the end of 2006.

Single-detached homes sold after an average listing period of 24 days in December, down from the 35 day listing period before sale in the month of December 2006. Year-to-date, the average listing period before

a sale takes place has been 21 days compared to the year-to-date figure of 35 days at this time in 2006.

Regina sees gains in employment and weekly earnings

Regina has seen average employment gains of just fewer than 1,000 employed by the end of December. Unemployment stood at 3.9 per cent by the end of the fourth quarter, slightly higher than the province as a whole which was recorded at 3.7 per cent. Both the service and goods sectors contributed to the minimal gains.

Average weekly earnings were up close to five per cent in all industries combined. The goods sector saw gains of 9.8 per cent while the service sector recorded an increase of four per cent in average weekly earnings.

The construction sector ended the fourth quarter with 6,900 employed, up 150 jobs from that seen in 2006 at that time. The unemployment rate in construction ended the year at 4.2 per cent. Average weekly earnings within the construction sector recorded an average year-to-date gain of 9.4 per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
