

HOUSING NOW

Regina CMA

Canada Mortgage and Housing Corporation

Date Released: Third Quarter 2008

New Home Market

Regina starts highest since 1983

Year-to-date, total housing starts in the Regina Census Metropolitan Area (CMA) have now reached 688 units, the highest seen at this time of year since June 1983. All of the strength in total housing starts is coming on the single side where starts are now up 28 per cent over this time in 2007.

By the end of the second quarter, multi starts have fallen off 24 per cent compared to mid-year 2007. The entire decline has been felt in the row housing where starts were down 72 per cent compared to the end of June in 2007. An increase of 22 per cent in apartment starts and an almost doubling of semi-detached starts only partially compensated for this decline.

There has been a sharp decline in the proportion of housing starts

occurring within the city limits so far in 2008. By the end of June, the city captured 78 per cent of the total housing starts compared to just over 90 per cent of the starts in 2007. Almost 69 per cent of the single-detached starts occurred within the city limits in the first half of 2008. In 2007, 84 per cent of the single starts were within the Regina city boundaries.

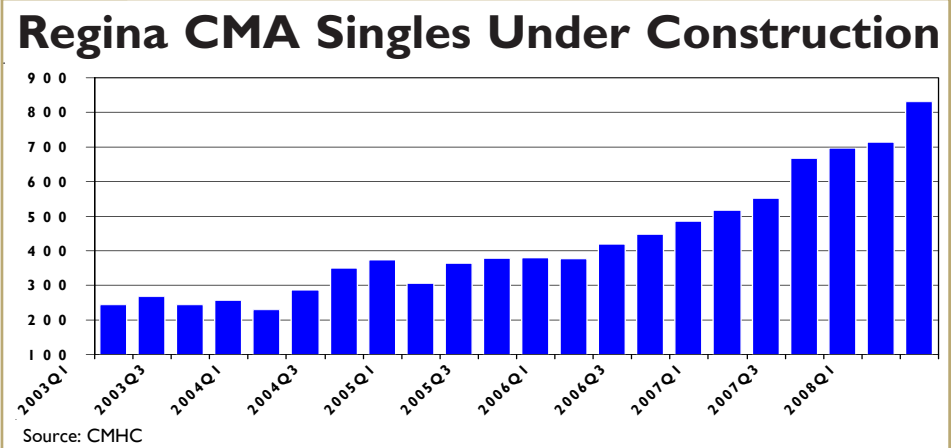

White City led the way with total housing starts of 78 units in the first two quarters of 2008 compared to 28 starts at this time last year. Balgonie has reported 20 starts so far in 2008, four times the five units in 2007 at this time. All communities except the R.M. of Pense have seen an increase in starts in 2008.

Total supply reaches 1,422 units

The total supply of units, including those in the construction stage as well as those completed and ready for sale, ended the second quarter up 50 per cent reaching 1,422 units compared to the 947 units seen at the end of June 2007. The single and multiple unit supply increased by approximately 50 per cent compared to the end of the second quarter of 2007.

More than 98 per cent of the supply of new housing units was found to be in the construction stage. In June, the total volume of units under construction was up 51 per cent to 1,397 units compared to 928 at the end of June in the previous year. The total number of units under con-

Figure 2

struction in any month has increased on a year-over-year basis since February 2007.

There was a year-over-year increase of more than 50 per cent in the number of single units that were in the construction stage in June, the highest number of units under construction at this time of the year since June 1983. The number of single-detached units under construction in any month has seen a year-over-year increase since April 2004.

The number of multi units in the construction stage in June was up 51 per cent over this time last year to 567 units. This number of multiple units under construction in June has not been surpassed since 1983. Most of the multiple units under construction in June were apartment units. Apartments at various stages of construction rose to 395 units compared to 144 units at the end of the second quarter of 2007. Row units under construction slipped 44 per cent to 114 units compared to

204 units recorded at the end of June 2007. The number of semi-detached units at various stages of construction more than doubled the June 2007 figure.

Single absorptions up in first two quarters

Accumulated single absorptions were up almost 13 per cent compared to the end of June 2007. This was the highest number of units absorbed by this time of year on record. Single units are being absorbed at an average rate of 57 units per month compared to an average monthly absorption of 50 units per month in the first half of 2007. The 108 multiple units absorbed in the first two quarters is down 33 per cent from last year at this time. There have been 12 semi-detached units absorbed in 2008 compared with ten in the first half of 2008. Row absorptions totaled 72 units in the first two quarters of 2008 compared to 117 units absorbed in the same time period of 2007. There were 24 apartment absorptions

compared to 35 units absorbed by the end of June 2007.

Average price of new homes up 18 per cent

By mid-year 2008, average selling price is approaching \$340,000 in the capital, more than 18 per cent over the 2007 second quarter figure. At the end of the second quarter, absorptions in the \$300,000 to \$349,999 range captured more than 26 per cent of the total absorptions in 2008, up from 19 per cent in 2007. Year-to-date absorptions in this price range were up 57 per cent compared to 2007. Absorptions in the price range of \$350,000 to \$399,999 tripled and now form almost 20 per cent of the market compared to ten per cent in 2007.

New House Price Index up 30 per cent

Statistics Canada's New House Price Index (NHPI) is a measure of the increase in the price of a house where the detailed specifications pertaining to each house remain the same between two consecutive periods. In 2007, the NHPI in Regina increased over 22 per cent. Statistics Canada reports that, in the first five months of 2008, the Regina NHPI increase has been one of the highest in the nation with a year-over-year increase of almost 30 per cent. Considering the price of the building only, the index shows a 33 per cent increase.

Resale Market

Existing housing sales see downturn in first half of 2008

Year-to-date, existing home sales were down six per cent at the end of the second quarter compared to the number of sales recorded by the end of the first half in 2007. June seasonally adjusted sales were down 1.8 per cent compared to May 2008 and down eight per cent from the June 2007 figure. Monthly seasonally adjusted sales have been on a downward trend since October 2007.

New listings in the first half were up 37 per cent compared to this time in 2007. June seasonally adjusted listings were up 4.1 per cent compared to May and up 40 per cent compared to the June 2007 seasonally adjusted figure. The seasonally adjusted monthly new listings trend has been on the upswing since October 2006. Reduced sales and an increase in the pace of new listings, has driven up the inventory of active listings. In June, active listings were double the June 2007 figure. Seasonally adjusted active listings were up just over ten per cent compared to May and up 39 per cent compared to the June 2007 inventory.

The June sales-to-active listing ratio was 24.8 per cent, down 44 percentage points from the June 2007 ratio. The June 2008 seasonally adjusted ratio was down 4.7 percentage points from May 2008 and down 11 percentage points from the June 2007 ratio.

Average resale price mounts

The year-to-date average price for single-detached homes was \$225,896, up 50 per cent from an average price of \$150,958 at the end of June 2007. The seasonally adjusted average price in June was up one per cent compared to May 2008. Average price growth is showing signs of easing. The trended month-over-month gain has been slowing since its peak in August when it reached 4.8 per cent.

Economy

Sluggish labour force expansion restricts employment growth

Seasonally adjusted, year-to-date figures indicate the Regina labour force has seen an increase of only 400 potential workers. Year-to-date, seasonally adjusted employment growth has been restricted to 700 jobs. The seasonally adjusted unemployment rate is running at 4.1 per cent in June and has declined in the months of May and June 2008. The participation rate has seen year-over-year declines of 1.1 percentage points since June 2007.

Turning to employment by sector, Regina's goods sector exhibited virtually no growth while the service sector saw only a minimal increase in employment. The service sector saw a substantial uptick in retail trade employment but this was eaten up by losses in other sectors.

Figure 3

Regina's construction labour force has seen little change in the first half of 2008 ending with 8,200 persons in June. Construction employment was 7,000 persons. The construction sector was experiencing an unemployment rate of 4.9 per cent in June, slightly higher than the 4.4 per cent in June 2007.

Construction earnings rise 12 per cent

The escalation in average weekly earnings so far this year in Regina is approaching three per cent over last year. Most of the growth has been seen in the goods sector where a 13 per cent increase has been recorded. The service sector has recorded a

minimal rise of less than one per cent. In the first five months of 2008, average weekly earnings were up almost three per cent for all industries. All of this strength is coming on the goods side where earnings have escalated close to 13 per cent. Construction has seen an increase of about 12 per cent.

Building permits ramp up

In dollar terms, total building permits for the city of Regina in January to May were up close to 29 per cent compared to May 2007. Residential, industrial and institutional permit dollars were up while commercial permits were down compared to the end of May 2007.

Year-to-date residential permit volumes were up more up 52 per cent compared to last year at this time. Single permits were up 38 per cent and multiple permits have doubled. Permits have been issued for 121 apartment units year-to-date, up 75 per cent compared to May 2007. There have been permits for construction of 22 semi-detached units but no row permits have been issued.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
