## Saskatoon CMA

Canada Mortgage and Housing Corporation

Date Released: Third Quarter 2008

## New Home Market

## Housing starts see highest year-to-date performance in 25 years

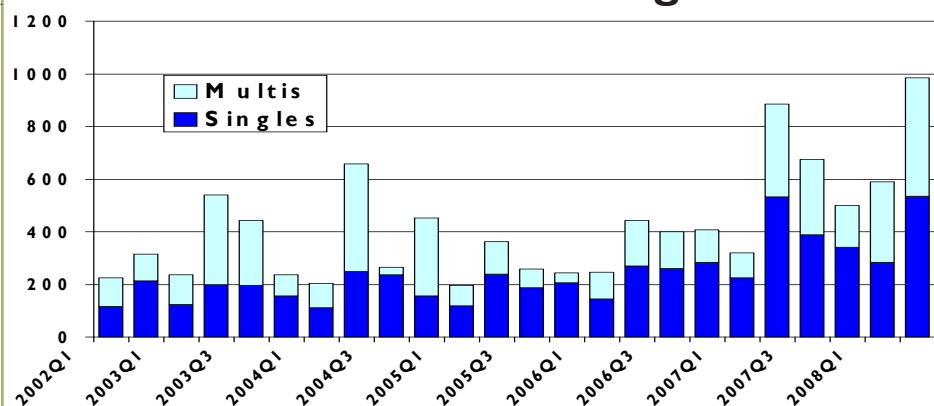

Saskatoon Census Metropolitan Area (CMA) ended the first half of 2008 with total housing starts of 1,574 units, 30.6 per cent ahead of the same time in 2007. This is the highest year-to-date starts figure seen in June since 1983.

There have been 820 single-detached starts in the first two quarters of 2008, a volume not seen since June 1983 when there was high demand from baby-boomers for single-detached housing. Notwithstanding these strong year-to-date numbers, June marked the first month since August 2006 when single starts declined on a year-over-year basis.

Turning to multiple construction activity, starts have also reached the highest level of activity since 1983. In

the first two quarters of 2008 there have been 754 multiple units started, 68 per cent ahead of the year-to-date starts in June 2007. Apartment units have led the way with 545 starts. Accumulated semi-detached starts numbered 56 units while row housing starts have hit 153 units.

The city of Saskatoon captured 71.4 per cent of the total starts in the CMA in the first half of 2008. This is slightly less than the 2007 first half figure of 74.3 per cent. The city held its own on the single-detached side with 66 per cent of the market compared to 65 per cent in 2007.

The towns of Warman and Martensville were the centres primarily responsible for construction activity in the area surrounding Saskatoon with 116 and 217 total starts respectively. Warman's starts in 2008 more than doubled 2007 activity but Martensville starts fell off 14.7 per cent compared to the first two quarters in 2007. Total starts numbers in Warman were elevated by the addition of 111 apartment units.

## **Total supply of new housing reaches 2,647 units**

The total supply of housing units comprised of units under construction and units that are completed and unabsorbed, is now 53 per cent ahead of the figure seen at the end of the first half of 2007. In June, 2,647 units were in supply, the highest level on record.

In June, the supply of new singles, totaling 1,317 units, was 45 per cent

above the 2007 figure and has reached the highest point on record. The supply of multiple units increased to 1,330 units in June, 63 per cent above the June 2007 number.

More than 99 per cent of the supply of housing was comprised of housing units that were under construction. In total, there were 2,628 housing units underway, a 54 per cent increase over the June 2007 number.

Almost 1,300 single-detached dwellings were under construction in June, the highest number of single units under construction ever recorded. The singles under construction number has increased on a year-over-year basis in every month since December 2005.

There were 1,329 multi units under construction in June, the highest seen since July 1985 and 63 per cent higher than the June 2007 figure. Most of these units (891) are apartment condominiums. There were 340 row units under construction in June, up almost 20 per cent from the June 2007 figure. Close to 100 semi-detached units were in the construction stage at the end of the second quarter, 58 percent ahead of the 62 units seen at this time in 2007.

## **Single-detached absorptions up in first two quarters**

Single-detached absorptions were up close to 30 per cent over last year at this time with 555 single units absorbed. Average absorptions of all types of single units (both freehold

and condominium) were 92.5 units per month compared to 84 units throughout 2007. Multiple absorptions recorded a 93 per cent uptick to reach 340 units by June 2008. At the end of the second quarter, row and apartment absorptions match closely with the previous year at 136 and 138 total absorptions respectively. Semi-detached absorptions have added 66 units to the total multi units occupied.

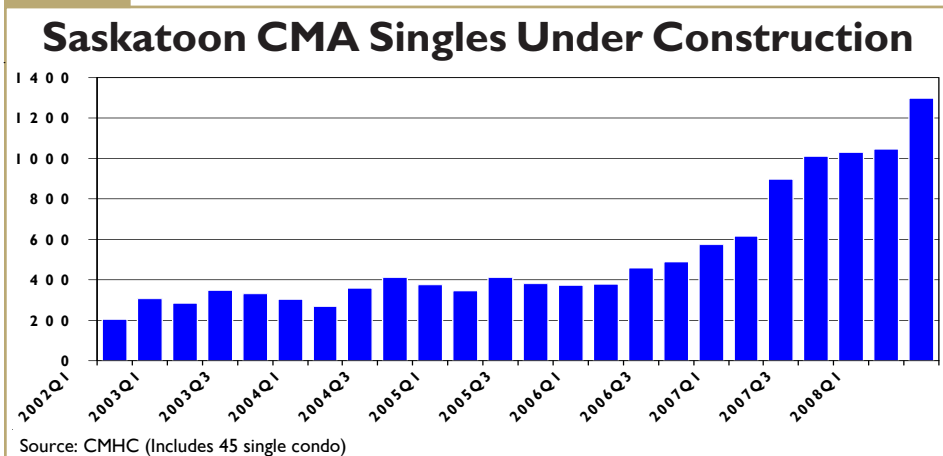

## **Average price of new single-detached units up 28 percent**

According to the latest absorption data, the average price for newly constructed single-detached homes to the end of the second quarter was \$332,404, a 28 per cent increase over the June 2007 year-to-date figure. Much of the increase in average price is due to buyers moving into the higher price ranges. All price ranges above \$250,000 have seen an increase in their share of the total units absorbed. For example, absorptions in the price range of \$300,000 to \$349,999 captured approximately 11 per cent of the total absorptions by the end of June 2007. In the most recent half of 2008, absorptions in this price range captured 28 per cent of the total market.

## **New House Price Index escalates**

Statistics Canada's New House Price Index (NHPI) is a measure of the increase in the price of a house where the detailed specifications pertaining to each house remain the

Figure 2

same between two consecutive periods. In 2007, the NHPI increased almost 39 per cent. In the first five months of 2008, the Saskatoon NHPI has been a national leader with an annual price increase of 45 per cent. In May, the price index for the building only has escalated 31 per cent while the land index was up 26.5 per cent.

## Resale Market

### Existing housing sales drop in first half of 2008

Year-to-date, existing housing sales were down 14 per cent at the end of the second quarter compared to the end of the first half in 2007. June seasonally adjusted sales were down 1.9 per cent compared to the previous month and down eight per cent from the June 2007 figure. Saskatoon seasonally adjusted monthly sales have been on a downward trend since October 2007.

New listings were up 47 per cent year-to-date compared to this time

in 2007. June seasonally adjusted listings were up 2.7 per cent compared to May and up 42 per cent compared to the June 2007 seasonally adjusted figure. The monthly seasonally adjusted new listings trend has been on the upswing since October 2006. As sales were down and new listings up, the inventory of active listings is building. In June, active listings reached 2,113 units, two and a half times the June 2007 figure of 836 listings. Seasonally adjusted active listings were up 9.2 per cent compared to May and were double the June 2007 inventory.

The June sales-to-active listing ratio was 15 per cent, down 42 percentage points from the June 2007 ratio. The June 2008 seasonally adjusted ratio of 19 per cent was down 3.7 percentage points from May 2008 and down 31.2 percentage points from the June 2007 ratio.

### Average resale price continues to climb

The year-to-date average price for single-detached homes was

\$289,420 up 32 per cent from an average price of \$219,531 at the end of June 2007. The seasonally adjusted average price in June was up 1.4 per cent compared to May 2008. There is some indication average price growth is easing. The trended month-over-month gain has been generally easing since January 2008 after the peak April 2007. The year-over-year seasonally adjusted trend peaked in August 2007 and has since been in decline.

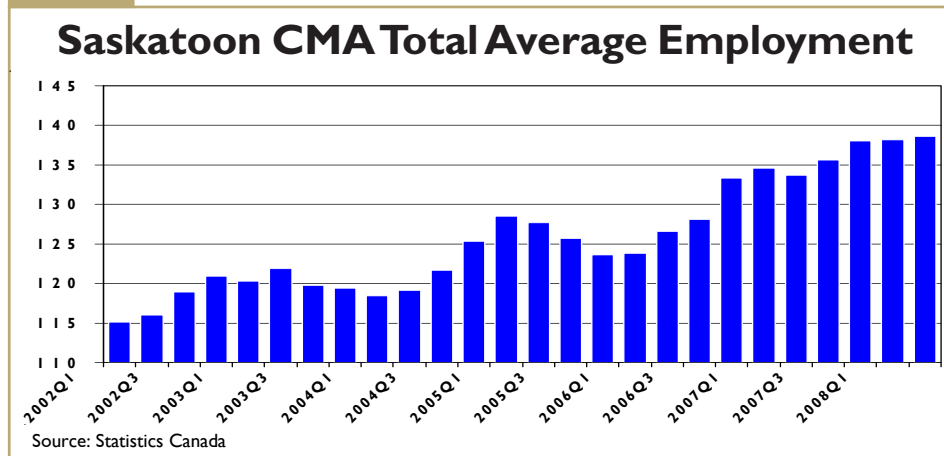

## Economy

### Labour force increase fuels job growth

Seasonally adjusted, year-to-date figures indicate the Saskatoon labour force has seen an increase of 3,200 potential workers helping to fuel employment growth of 4,100 jobs. On a month-to-month basis, the employment trend has been up since November 2006. The seasonally adjusted unemployment rate is running at 3.9 per cent in June and has been in decline since February 2007. The participation rate is running close to last year's June figure but has seen year over year declines since February 2008.

Turning to employment by sector, Saskatoon's goods sector exhibited gains of almost 5,000 jobs but the service sector bit into this increase with a loss of just over 1,500 employed. Within the goods sector, resource-based employment increased as did manufacturing. The service sector saw a substantial downturn in retail trade employment.

Figure 3

Saskatoon's construction labour force has seen monthly declines in the first half of 2008 ending with 9,500 persons in June. This is close to the 9,400-person workforce available in June 2007. Construction employment is up about 1,300 jobs on a year-to-date basis. The construction sector saw unemployment in June of 4.2 per cent.

### Construction weekly earnings grow in first half

In the first half of 2008, average weekly earnings for all industries were up almost 8.5 per cent com-

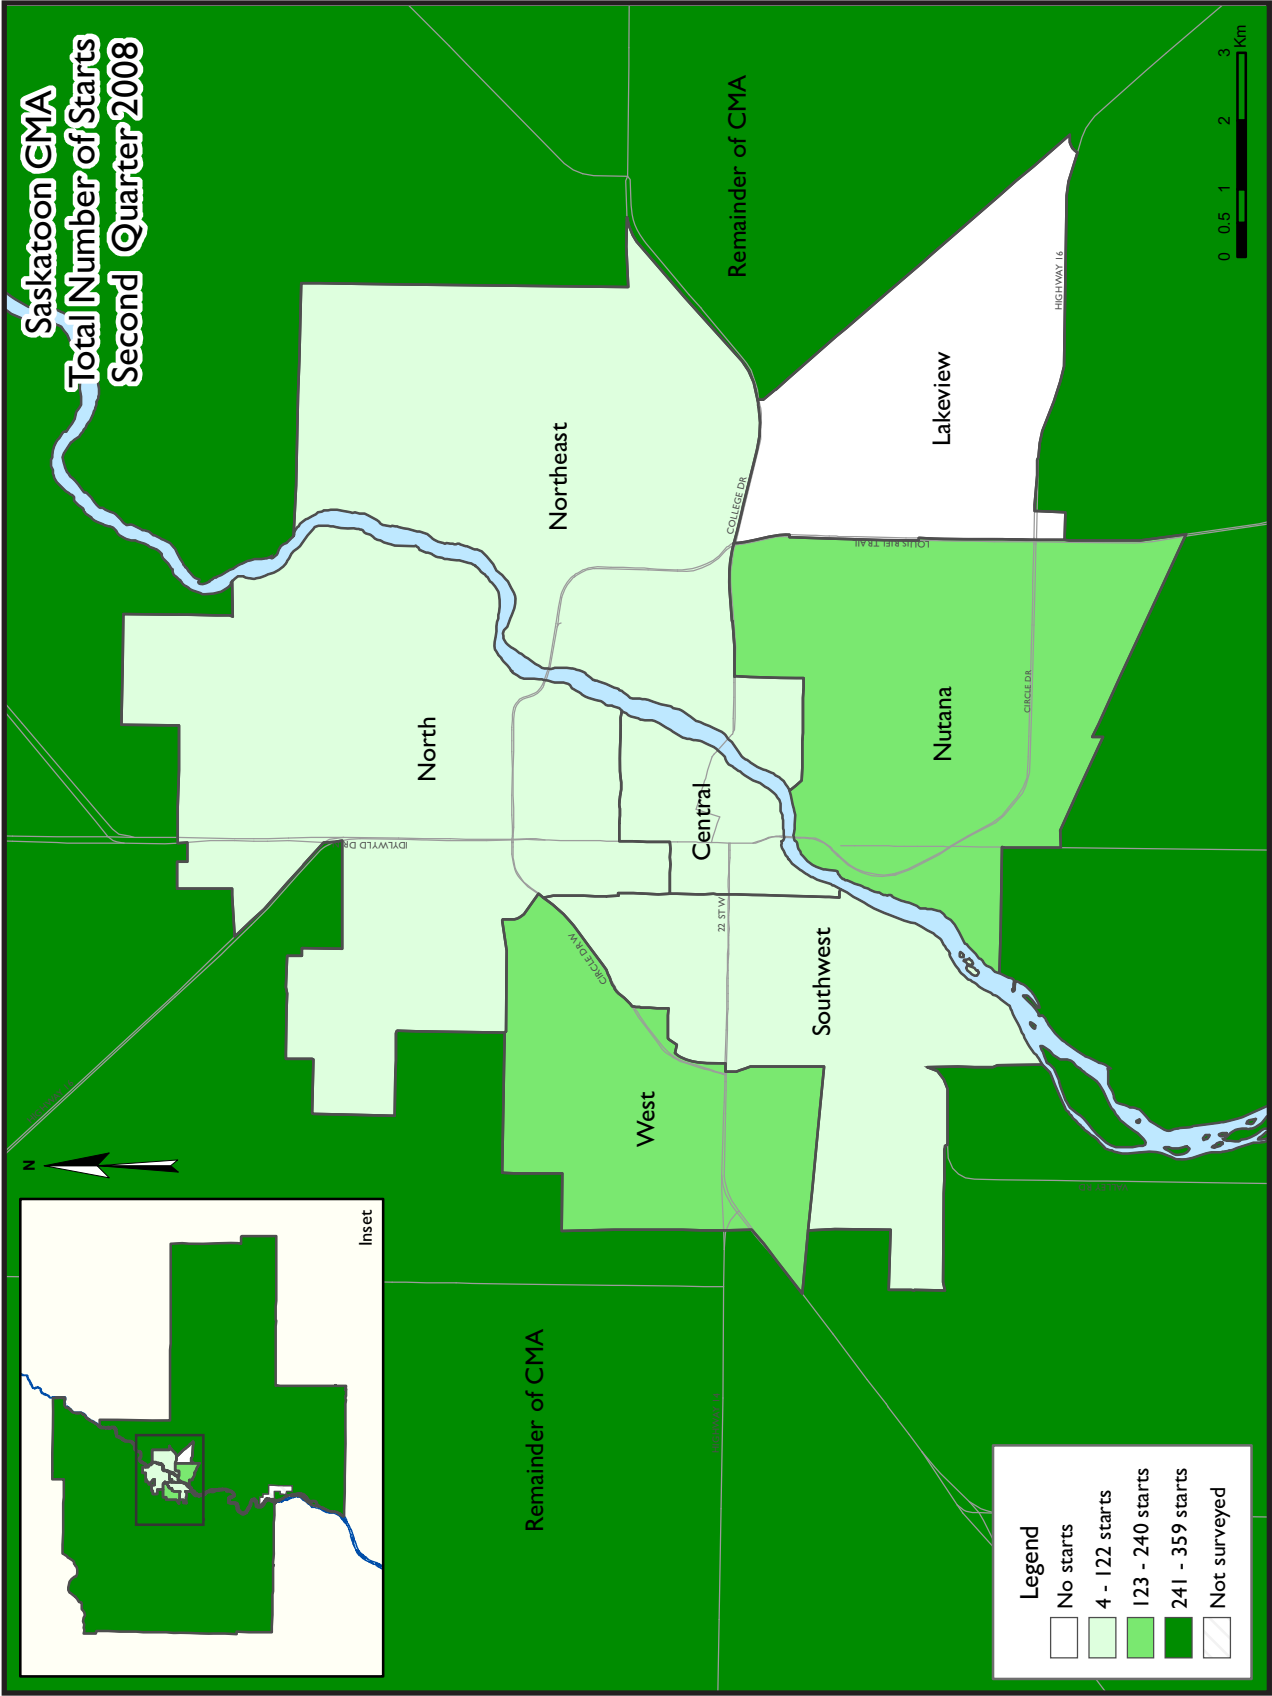

pared to this time in 2007. The goods sector led the way with a 12 per cent increase while the service sector average weekly earnings grew 6.5 per cent over the 2007 figure. Average weekly earnings in construction escalated seven per cent.

### Permits up sharply

The dollar volume of all types of building permits saw a 27 per cent increase by May 2008 compared to the first five months of 2007. Residential permits dollar volumes were up close to ten per cent. Commercial permits were up almost 63 per

cent while institutional and government permits were up 87.5 per cent.

There have been residential permits issued for 1,126 units by the end of May, down 3.4 per cent on a year-to-date basis. Single housing unit permits were up 5.4 per cent as were permits for apartments, semi-detached units and conversions. A 51 per cent drop in row permits has pulled total permits lower.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
