St. John's Housing Market Records Stellar Second Quarter

The St. John's area housing market recorded a stellar second quarter, thanks to a bustling economy, positive net-migration and stable consumer confidence. These factors combined increased the level of demand for both new and existing

homes throughout all municipalities within the region during the April to June period. Strength in the existing homes market continued, while growth in residential construction activity was led by a surge in starts of single-detached homes. As expected, the positive momentum from last year's Hebron and White Rose oilfield extension announcements, combined with favourable demographic and economic fundamentals, produced record second quarter results.

Exceptional Demand for New Homes

Although 2004's record second quarter housing starts actually exceeded second quarter 2008 levels by 110 starts, demand for new homes from April to June was exceptional within the St. John's region. In fact, starts were limited only by builder capacity constraints due to a very tight labour market for skilled trades. In support of this, most new home contracts signed so far this year have been for completion as far as nine to 12 months out and include final price protection clauses for builders. Such high demand boosted residential construction activity throughout the St. John's region during the second quarter and resulted in double-digit growth. Total housing starts increased 20.6 per cent to 456 units compared to 378 in the second quarter of 2007. Single-detached starts rose 16.5 per cent, with 368 units recorded versus 316 the previous year. The volatile multiple starts segment jumped 42 per cent to 88 starts during the quarter. With the exception of a 13 per cent decline in housing starts in St. John's City, all other submarkets experienced sizeable growth, with increased new home construction activity posted across the board. Mount Pearl led the pack with 75 per cent growth in starts, followed by the Remainder of the CMA, up 72 per cent. Conception Bay South (CBS) posted a 43 per cent gain and Torbay increased 42 per cent, followed by Paradise up 41 per cent. It should be noted that only three of the six submarkets accounted for 82 per cent of all starts, or 372 of the 456 starts

recorded. They were St. John's City, Paradise and CBS, with 141, 124 and 107 starts, respectively. The average new house price for the St. John's CMA increased 4.8 per cent to \$222,690 compared to the second quarter of 2007. Prices were highest in the submarket classified as the Remainder of the CMA, where the average price of a newly built home jumped 11.9 per cent to \$244,736. CBS continued to post the lowest average new house price, with an average price of \$190,538 during the second quarter, but also had the highest price growth of 13.7 per cent. Throughout the St. John's region, approximately 68 per cent of all newly built homes fell within the \$150,000 to \$249,999 range during the quarter, with the largest growth in market share occurring within the \$250,000+ segment. Overall, the demand for new homes was very high during the second quarter and is expected to continue throughout the year, supported by a strong economy, improving migration patterns and stable consumer confidence.

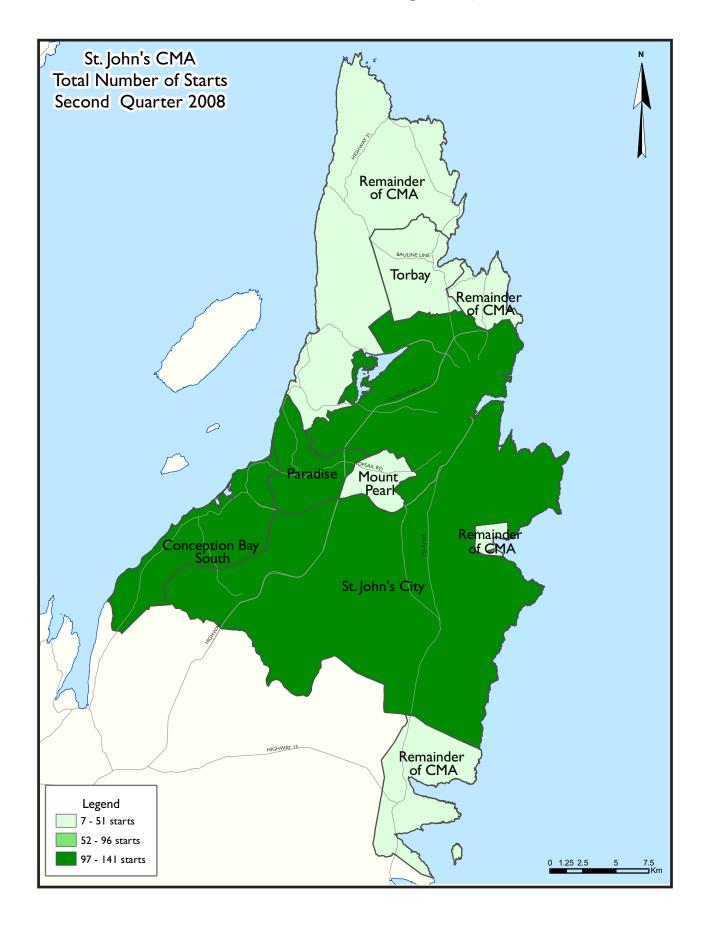

Existing Homes Market Maintained Record Pace

The resale market maintained its record pace throughout the second quarter and became firmly classified as a sellers market. Having trended downward since the third quarter of 2007, the sales-to-active listings ratio indicated a sellers market by the end of the fourth quarter. That carried over into the first three months of 2008 and continued during the second quarter. Much of the increased activity has been driven by the optimism created by recent NL Government budget surpluses and last August's Hebron oilfield announcement, as buyers have continued to bet on property values rising significantly in light of a formal agreement being signed. Tight resale market conditions brought about by high demand and low available inventory levels, continued to pose a challenge for buyers, but rewarded sellers during the quarter. Multiple offers and offers above asking price were once again the norm on choice properties. There were 2,243 new residential listings during the second quarter versus 2,344 during the

same period last year. With sellers conditions prevailing, active listings averaged just 1,540 from April to June compared to 2,750 during the second quarter of 2007. The unadjusted sales-to-active listings ratio reached 26.3 per cent in June and averaged 23.5 per cent during the quarter, nearly double the 12 per cent level recorded a year earlier.

Record Second Quarter for MLS® Sales and Prices

The existing homes market continued its record pace during the second quarter, setting records for both unit sales and average price. The number of MLS® sales recorded increased 9.3 per cent over last year, with 1,084 sales compared to 992 during the second quarter of 2007. Once again, the average MLS® residential house price grew aggressively throughout the quarter, maintaining a trend that began towards the end of the second quarter of 2007. Despite record buying activity, the dramatic reduction in active listings appears to have restricted unit sales somewhat. However, with lower inventory levels and more buyers during the April to June period, the average MLS® residential price surged 16 per cent to \$169,942 compared to \$146,509 over the same period last year, a difference of \$23,225. The relative strength in the average MLS® residential price has been driven by low inventory and high demand, as well as a positive shift in the current economic and demographic fundamentals. These trends are expected to continue throughout the rest of this year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website.
