Housing Market Posts Record Third Quarter

A buoyant local economy, healthy in-migration and a favourable employment picture helped the St. John's area housing market post a record third quarter. These factors led to an increase in demand for both new and existing homes throughout all submarkets within

the region during the July to September period. Record sales activity in the existing homes market continued, while record growth in residential construction was led by a surge in starts in the all-important single-detached segment. As expected, a positive shift in demographic and economic fundamentals, paired with upward momentum from recent oil sector announcements, produced record third quarter results.

Brisk Demand for New Homes Continued

Demand for new homes from July to September was brisk within the St. John's region. In fact, starts were held back only by builder capacity constraints, due to a very tight labour market for skilled trades. In support of this, most new home contracts signed so far this year have been for completion as far as nine to twelve months out and include final upside price protection clauses for builders. The high level of demand bolstered residential construction activity throughout the St. John's area during the third quarter and resulted in double-digit growth. Total housing starts increased 26 per cent to 660 units compared to 523 in the third quarter of 2007. Single-detached starts rose 25 per cent, with 520 units recorded versus 417 the previous year. The volatile multiple starts segment jumped 32 per cent to 140 starts during the quarter compared to 106 a year ago. All submarkets experienced sizeable growth during the July to September period, with robust new home construction activity recorded across the board. Paradise led the way with a 55 per cent gain in starts, followed by Torbay up 54 per cent. Conception Bay South (CBS) posted 26 per cent growth and the remainder of the CMA submarket increased 24 per cent, followed by St. John's City up 14 per cent, while Mount Pearl advanced seven per cent. The average new single-detached house price for the St. John's CMA increased 11 per cent to \$235,767 compared to the third quarter of 2007. Prices were highest in the submarket of Torbay, where the average price of a newly built

Figure 2

home was \$299,600. CBS continued to post the lowest average new house price, with an average price of \$193,801 during the quarter, up 13 per cent. Throughout the St. John's area, approximately 67 per cent of all newly constructed homes fell within the \$150,000 to \$249,999 range during the quarter, with the largest growth in market share occurring within the \$250,000+ segment. Overall, the demand for new homes was very high during the three month period (July-Sept).

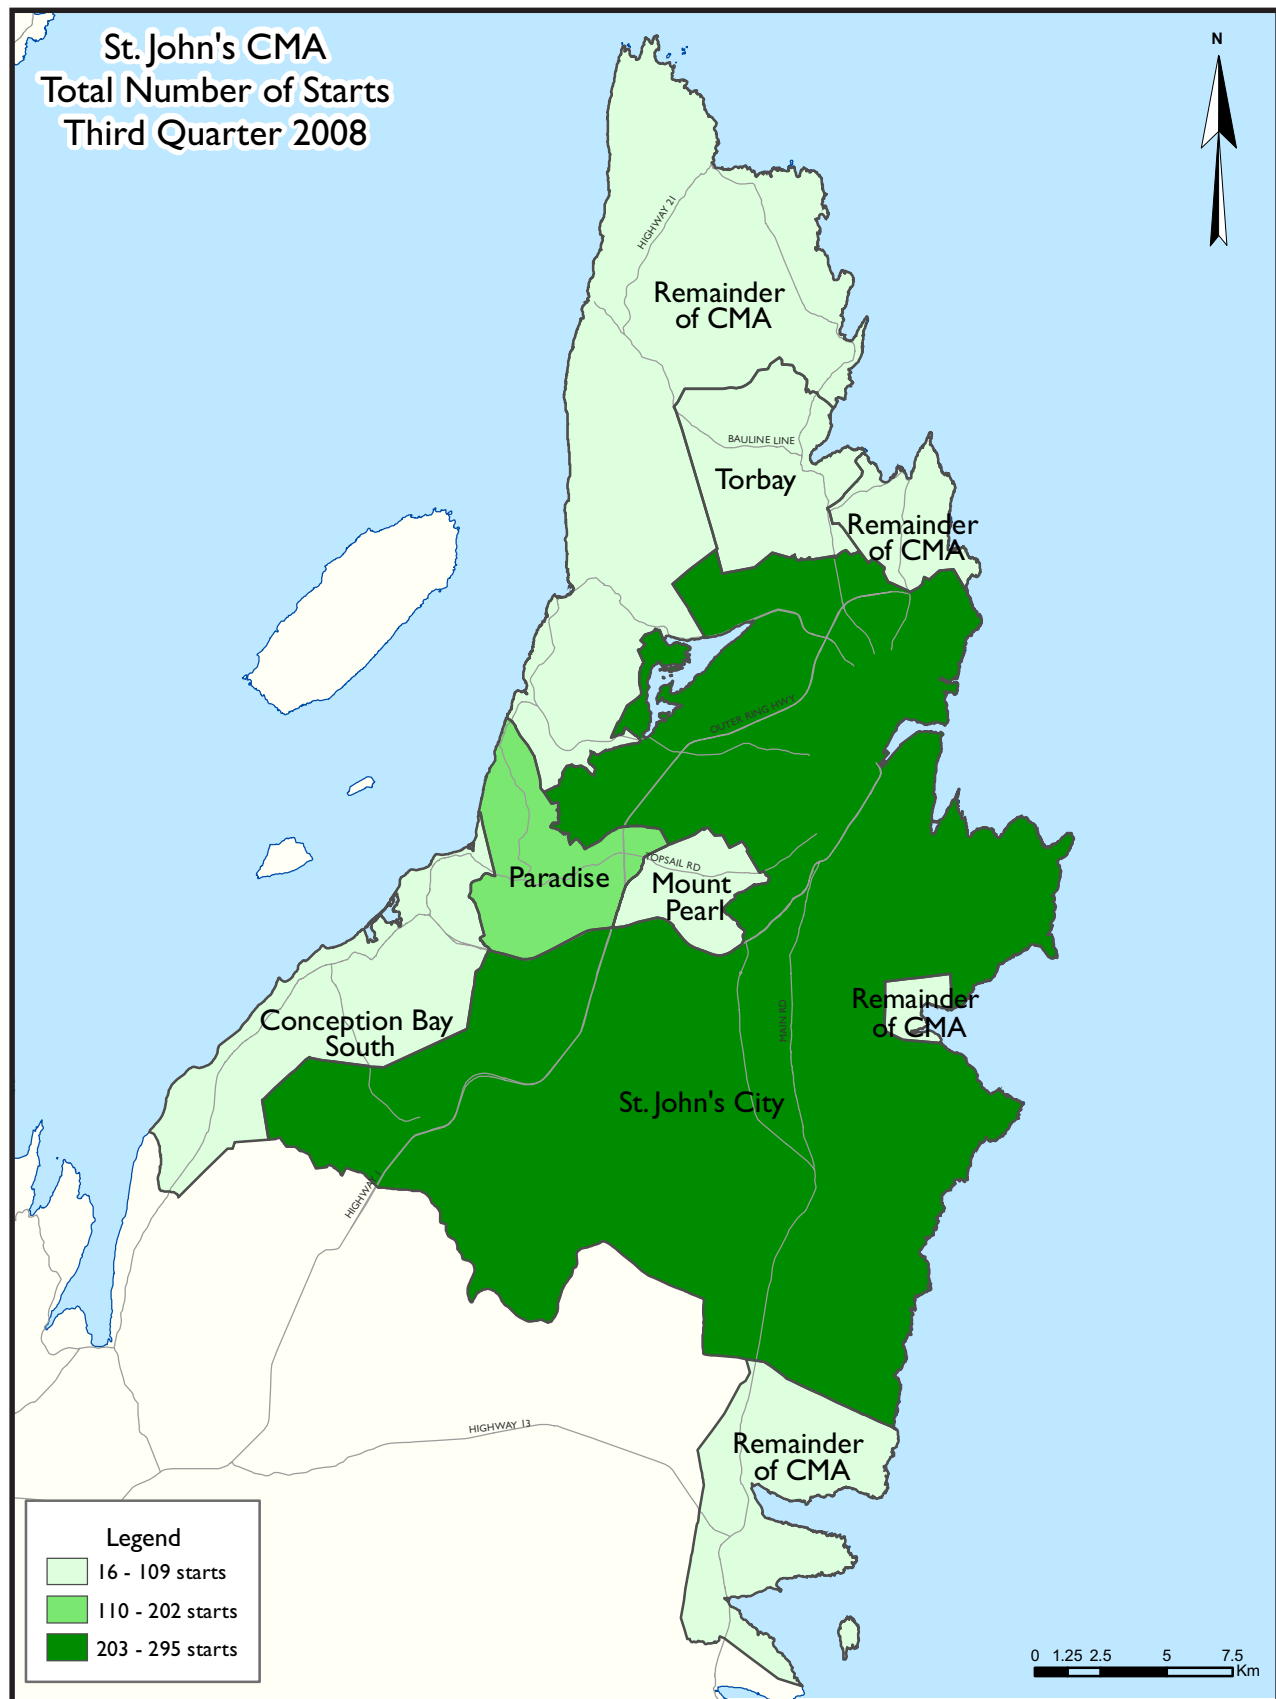

Existing Homes Market Maintained Record Pace

The resale market maintained its record pace throughout the third quarter, as sellers market conditions prevailed. The sales-to-active listings ratio indicated a sellers market by the end of the fourth quarter of 2007. That carried over into the first six months of 2008 and continued during the third quarter. Much of the increased activity was driven by the optimism created by recent NL Government budget surpluses, the August 2007 Hebron oilfield announcement and the September

2007 White Rose oilfield extension announcement. In light of these announcements and the signing of the formal Hebron agreement this past August, many buyers have been speculating on property values rising significantly, which they have. Tight resale market conditions brought about by exceptional demand and a 40 per cent reduction in inventory levels continued to pose a challenge for buyers, but rewarded sellers during the quarter. Multiple offers and offers above asking price were once again the norm on many properties during the July to September period. There were 2,246 new residential listings during the third quarter versus 2,120 during the same period last year. With sellers conditions prevailing, active listings averaged just 1,713 from July to September compared to 2,756 during the third quarter of 2007. The unadjusted sales-to-active listings ratio reached 36 per cent during the month of September and averaged 33 per cent during the quarter versus the 19 per cent level recorded a year earlier.

Record Third Quarter for MLS® Sales and Prices

The existing homes market continued its record pace during the third quarter, setting records for both unit sales and average price. The number of MLS® sales increased 11 per cent over last year's third quarter, with 1,695 sales compared to 1,529 during the same period in 2007. Once again, the average MLS® residential house price grew aggressively throughout the quarter, maintaining a trend that began in mid 2007. Despite record buying activity, the dramatic reduction in active listings this year has restricted unit sales somewhat. With lower inventory levels and more buyers during the July to September period, the average MLS® residential price surged 19 per cent to \$182,306 compared to \$153,053 over the same period last year, a difference of \$29,253. The relative strength in the average MLS® residential price was driven by low inventory and high demand, as well as solid economic and demographic fundamentals in the St. John's region.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
