

HOUSING NOW

Winnipeg CMA

Canada Mortgage and Housing Corporation

Date Released: December 2007

Continued Construction Strength; Inventories Bear Watching

November saw 221 housing starts across the Winnipeg Census Metropolitan Area (CMA), a full 55 per cent ahead of the 143 units started in November 2006. That activity

brought total housing starts for the first 11 months of 2007 to 3,244 units, 22 per cent ahead of corresponding levels in 2006. This represents a level of construction activity not seen since 1988, when 3,891 foundations were poured through November.

The bulk of the starts came from the single-detached sector, where 154 homes began construction in November. That is a 12 per cent gain over November 2006 and pushed

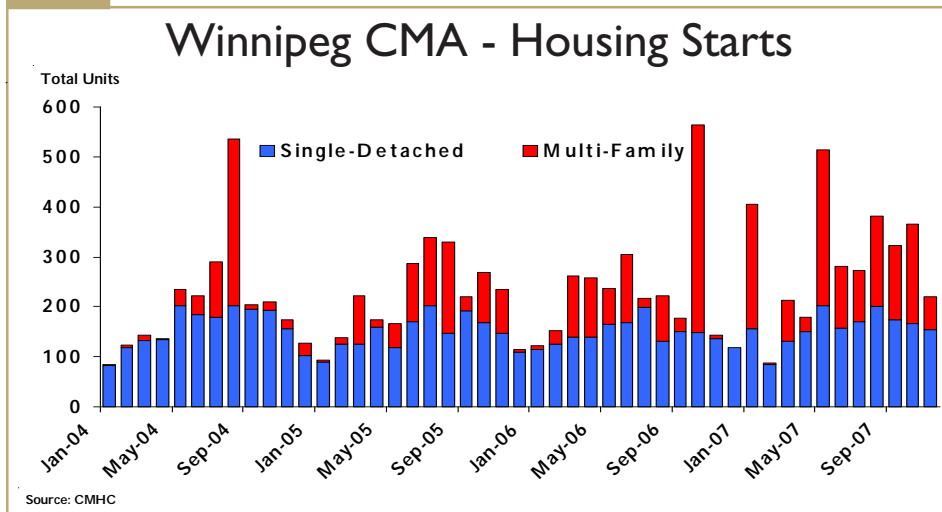

Figure 2

the total for the first eleven months of 2007 to 1,745 units, an eight per cent advance over the same period last year. The November performance also elevated total single-detached starts for 2007 over the 2006 full-year total. November's activity was also strong in several centres outside of Winnipeg. The R.M. of Macdonald saw nine starts and East St. Paul recorded eight, leaving each municipality with over 40 single-detached homes having started construction thus far in 2007. The R.M. of Springfield recorded four foundations poured in November, which pushed the year-to-date total over 100 units. The strength in new home construction in and around the Winnipeg CMA reflects a combination of factors, including robust economic growth, as well as demand from a variety of sources, including vacationers and recent immigrants

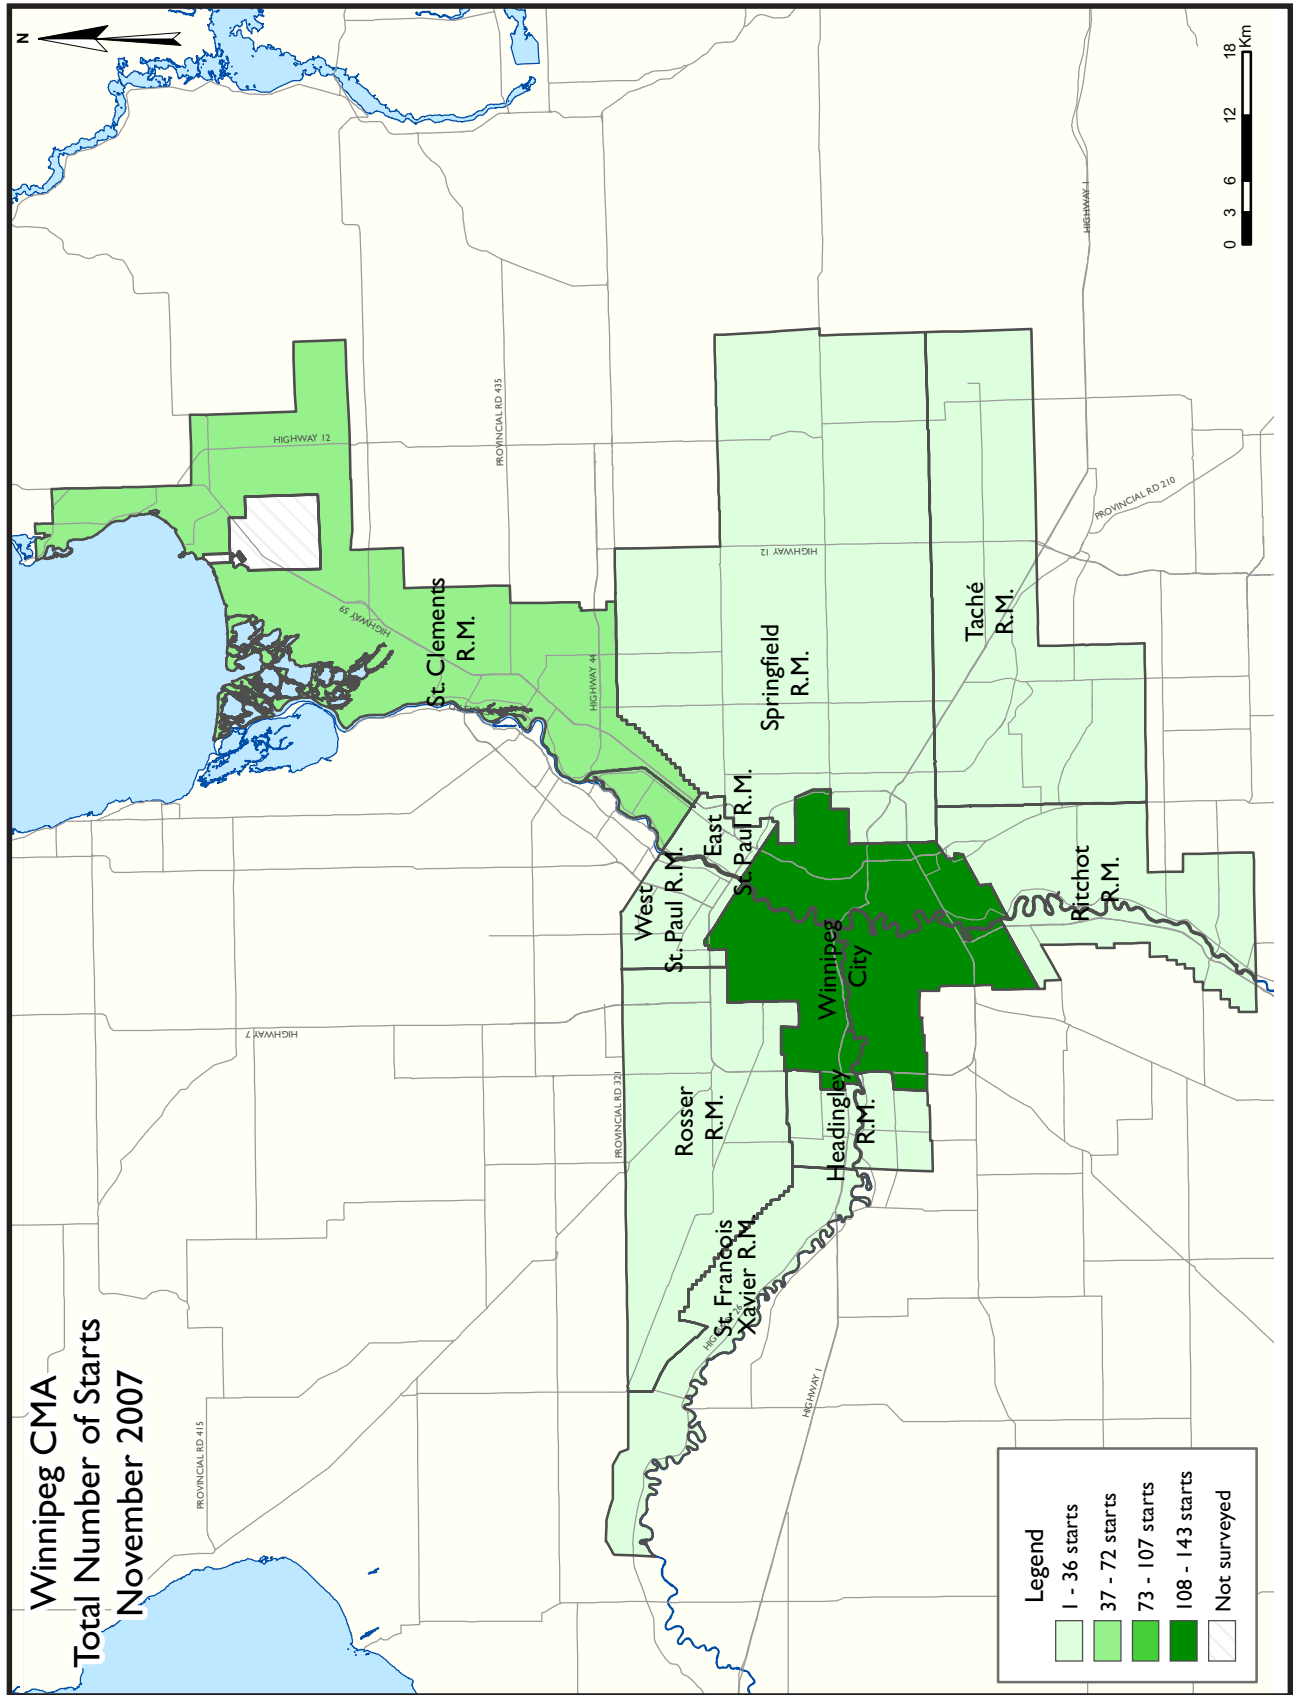

Meanwhile, the multi-family sector saw 67 starts in November. While this is lower than the triple-digit starts that had become the norm over the summer and fall months, it does represent a strong perform-

ance for November. By comparison, there were only six multi-family starts in November of 2006 and the ten-year average for the month to that point was only 21 units. The November performance pushed year-to-date starts for the Winnipeg CMA ahead of 2006 by 44 per cent, in line with CMHC's 2007 forecast. Counter to recent trends, however, was the fact that 30 of these starts occurred outside of the City of Winnipeg in the R.M. of St. Clements. This, coupled with seven single-detached starts, pushed total starts activity for the R.M. to 128 in the first 11 months of 2007.

Given the high levels of construction in 2007, particularly in the multi-family sector, attention should be paid to inventory levels. To date, the residential real estate market has shown a high propensity to absorb new units as they are completed. In November, there were only 37 complete and unabsorbed multi-family units, down 41 per cent from November 2006, and 15 less than were recorded in October. This came about despite the fact that there were 77 multi-family comple-

tions in the month. As more of the 1,806 multi-family units under construction reach completion, the ability of the market to absorb them will indicate, to a large degree, the strength of the residential housing market in the coming year. A significant rise in unabsorbed units may signal a return to a more balanced market, in line with long term growth trends for prices and volumes.

On the single-detached side is the fact that the inventory of complete and unabsorbed single-detached units has crept slightly higher to 248 units, six per cent ahead of November 2006. This represents the highest level since November of 1995 when there were 266 single-detached homes in inventory. While construction in this area has continued to grow, absorptions have remained largely in line with 2006 levels, down some two per cent on a year-to-date basis from November of that year. While this may be a short term aberration, attention must be paid to the levels of inventory over the winter months, given the potential for a seasonal slowdown in housing demand over that period.

HOUSING NOW REPORT TABLES

Available in ALL reports:

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
