

HOUSING NOW

Prairie Region

Canada Mortgage and Housing Corporation

Date Released: Second Quarter 2008

New Home Market

Gain in multi-family starts overshadowed by sharp decline in singles

In the first three months of 2008, total housing starts across the Prairie Provinces totalled 11,098 units, a ten per cent decline from corresponding levels last year. An impressive 27 per cent gain in

multi-family production could not compensate for weaker single-detached activity. Across the Prairies, single-detached construction in the first quarter fell by 38 per cent to 4,386 units, the poorest first-quarter performance since 2001.

The decline in Prairie housing starts can be attributed to weaker construction in Alberta and Manitoba. Strong gains have persisted in Saskatchewan where residential

Figure 2

construction continues to benefit from last year's migratory record. A total of 1,105 new homes were started in Saskatchewan in the first three months of 2008, a 41 per cent increase over the previous year. This also represents the strongest first-quarter performance in over 20 years. Single-detached builders led the increase, as the 688 starts from January to March were 43 per cent higher than the previous year. The increase was most pronounced in rural areas, where single-detached construction jumped 149 per cent. Not to be outdone, multi-family starts totalled 417 units across Saskatchewan, representing a 38 per cent gain. Apartment units led the charge with a 113 per cent increase over 2007's first quarter production.

Among Saskatchewan's urban centres, the Battlefords, Moose Jaw, Swift Current, and Yorkton, posted the largest year-over-year gains thus far, with each up more than 100 per cent. However, these centres represent a relatively small number of units. The most notable

increase was in Saskatoon, where starts climbed 85 per cent. At 590 units, Saskatoon's first quarter production was the highest in 25 years. The increase was led by a 222 per cent jump in multiples. In Regina, housing starts from January to March totalled 285 units, 10 per cent above 2007 levels. A 36 per cent gain in single-detached construction more than compensated for a 22 per cent reduction in multi-family units.

Manitoba is also enjoying record levels of migration, but it has yet to translate into higher housing starts. Local builders started work on 874 units during the first three months of 2008, a 17 per cent decline from the first quarter of 2007. Single-detached starts slipped by 11 per cent, while multi-family construction fell by 25 per cent. Within the province, rural areas and Winnipeg were responsible for the decline. Rural starts to the end of March fell 21 per cent, largely due to a drop in single-detached activity. In Winnipeg, where the majority of provincial construction occurs, housing starts fell by 24

per cent during the same period. Single-detached construction was relatively unchanged, thanks to robust demand and the introduction of new lots. Multi-family activity in Winnipeg, however, was nearly cut in half, as builders competed with an uncharacteristically strong first quarter of 2007.

In Alberta, builders are facing the brunt of declining migration and elevated inventories in the competing resale market. To the end of March, a total of 9,119 new homes were started, a 13 per cent drop from the same period in 2007. A significant gain in multiples could not offset weaker single-detached construction. From January to March, builders started 3,193 single-detached homes, a drop of 47 per cent from the previous year. This represents the poorest quarterly performance in Alberta in seven years. Multiple starts, meanwhile, increased 32 per cent over corresponding 2007 levels, as an 86 per cent gain in apartment construction more than countered weaker activity for semi-detached and row units.

Among Alberta's urban centres, Calgary and Canmore recorded the only year-over-year gains in starts thus far. After three months, new home construction in Calgary increased 68 per cent, thanks to elevated multi-unit starts. All of Calgary's gain in multiples occurred in the apartment segment of the market, where a number of multi-tower projects were recorded. To the end of March, concrete was poured for 3,130 apartment units, only a few hundred fewer than the annual total

for 2007. Single-detached construction in Alberta moved in the opposite direction, with every centre except Medicine Hat and Wood Buffalo recording declines in the first quarter. Edmonton and Calgary faced the most notable reduction, with single-detached starts down 62 and 38 per cent, respectively.

The jump in Saskatchewan housing starts has boosted the number of units under construction, fuelling additional upward price pressure. At the end of March, the number of homes under construction in Saskatchewan was 46 per cent higher than March of 2007, reaching nearly 4,000 units. The resulting price pressure is clearly evident, with the latest release of Saskatchewan's New House Price Index (NHPI) up an astonishing 44 per cent over the previous year. In Alberta, the growth rate in the NHPI has moderated to nine per cent from the peak of 52 per cent 18 months earlier. The moderation in price growth in Alberta can be attributed to the 25 per cent reduction in single-detached starts. In Manitoba, the number of units under construction has climbed nearly 18 per cent year-over-year, leading to a 14 per cent gain in the NHPI.

Resale Market

Alberta resales down sharply, Saskatchewan on pace for another record

Early indications suggest that existing home sales in the Prairies

will decline in 2008, ending the string of seven consecutive records. According to the Canadian Real Estate Association, Saskatchewan is the only Prairie province on a record-setting pace, thanks largely to the remarkable turnaround in net migration and capacity constraints in the new construction industry. In the first two months of 2008, residential transactions in Saskatchewan climbed 24 per cent over the previous year, reaching 1,705 units. Alberta and Manitoba did not fare as well. During the same period, sales in Alberta dropped 28 per cent, as activity responded to weaker net migration and rapid price escalation from previous years. The decline was most pronounced in Calgary, where sales fell 33 per cent to the end of February. Despite solid demand in Manitoba, historically low listings are inhibiting sales. After two months, sales in Manitoba are down by less than one per cent.

Given Saskatchewan's rapid pace of sales and listings shortages in most markets, it continues to enjoy the strongest rate of price growth in the country. Following a record 32 per cent gain in 2007, the average resale price in Saskatchewan is up an astonishing 45 per cent in the first two months, reaching \$206,410. At this pace, Saskatchewan will overtake Quebec this year as Canada's fourth most expensive province. Regina is the strongest contributor to Saskatchewan's price growth, as the average price jumped 60 per cent after the first few months of 2008. While not as prevalent, listings shortages in Manitoba have pushed the average resale price up 12 per cent

to the end of February. In Alberta, a record level of listings combined with the drop in sales has constrained price growth considerably. In four of the last seven months, prices have recorded monthly declines. Despite this, Alberta's year-to-date average price was seven per cent higher than the corresponding average in 2007.

Economy

Saskatchewan's migratory turnaround at Alberta's expense

After 22 consecutive years of decline, net migration in Saskatchewan experienced a remarkable turnaround last year. A strong fourth-quarter inflow from other provinces pushed Saskatchewan's net migration to a record 13,583 people in 2007, with over 10,000 of those coming from other provinces. Bucking the trend from previous years, Alberta was the largest contributor to Saskatchewan, as nearly 7,000 people left Alberta last year to go east where house prices were much lower at the time. Accordingly, Alberta's net migration was cut in half in 2007. From July to December, interprovincial migration in Alberta was actually negative, the first such occurrence in 13 years. Some of Alberta's losses in the second half of 2007 moved to Manitoba, where record migration was also reported last year. At 288 people in the fourth quarter, interprovincial net migration in Manitoba was the strongest for any quarter in over 20 years.

Despite the decline in net migration and persistent labour shortages, Alberta continues to lead the rate of job growth across the Prairies. Following an impressive 4.7 per cent gain in 2007, average employment in Alberta to the end of March was up 3.3 per cent, representing 64,000 new jobs. In Manitoba, first quarter employment climbed 1.7 per cent, the best start to any year since 2000. Saskatchewan's job creation has been comparatively modest thus far, a surprise considering the low unemployment rate and rapid population growth. To the end of March, average employment in Saskatchewan was up only one per cent. This pace should improve through the duration of the year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
