

HOUSING NOW

Victoria CMA

Canada Mortgage and Housing Corporation

Date Released: March 2008

Housing starts decline, but keep pace with historical average

Construction commenced on 119 new homes in the Victoria region in February. This represents a decline when making both month-to-month and year-to-year comparisons. While there was a decline in total February housing starts, the number is consistent with the historical average (see Figure 1). In fact, the number of

starts recorded for February 2008 equals the average number of February new home starts over the past 10 years in the Victoria CMA. With respect to dwelling type, the number of single-detached new home starts was consistent with February 2007, while multiples accounted for the decline in total new home starts. It is worth noting

that Langford continues to drive new home starts in Victoria, accounting for nearly half of all starts in 2008 (see Table 1.1).

Continued employment growth (year-to-date growth: 6.2%), increased migration to the Victoria region, and rising levels of income are all strong economic indicators for the Victoria CMA. The regional economic growth combined with relatively low mortgage rates continue to stimulate demand for new homes in the market.

While the number of new home starts has declined relative to February of last year, the same cannot be said for the number of homes currently under construction. Over 3,200 new homes were under construction in February, representing an increase of 8% relative to February 2007. The bulk of these homes that are currently under construction are condominium apartments (roughly 70%), and most are located in the Victoria City and Langford. Demand for this type of home has been on the rise in recent years, as they are generally less expensive than single-detached homes and offer more flexibility in terms of lifestyle. Of the single-family units currently under construction, most are being built in Langford and Saanich (see Figure 2).

The number of completed new homes increased in February by 17% (year-over-year) – see Table 1. In terms of composition, apartment condominiums accounted for the largest share of completed units. While there was a significant year-

over-year increase in February completions, there was also a moderate increase in number of absorptions. In fact, the ratio of sales to completions for the month was very strong at 96%.

Despite the strong sales to completions ratio observed in February, the inventory of completed units that have yet to be occupied or sold increased by 45% relative to last year (see Table 1). However, the February 2008 inventory of 223 new homes is in line with the 10-year historical

average for the month of February. The bulk of inventory was apartment condominiums located in Saanich and Victoria City.

New house prices continue to rise in Metro Victoria, as the year-to-date average price of all completed and absorbed single-detached new houses climbed 28% relative to 2007 (see Table 4.1). New house sales in Langford and Saanich have been the driving force behind the rising prices in the Victoria region.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! The 2008 CMHC Housing Awards Program is officially underway!

If you've created a unique solution to enhance housing affordability in Canada, it is time you received the national recognition you deserve! CMHC is interested in receiving applications demonstrating best practices that have improved housing affordability. These initiatives may include large or small projects and demonstrate various ways to create affordable housing that meets the needs of the communities they serve. To find out more click on [Housing Awards Program](#).
