Victoria CMA Housing Starts On Rise In March

Metro Victoria new home starts increased by ten per cent in March relative to March 2007. While the number of new homes breaking ground increased in March, quarterly starts declined year-over-year (refer to Table 1). The number of single-family starts remained stable in the first quarter of 2008, but there was a down-trend in multi-family new home starts. Due to the volatility of the market for new multi-family units and the relatively small market size, it is too early to determine whether this is a trend.

Apartment condominiums accounted for both the increase in March starts and the decrease in quarterly starts in Metro Victoria. The municipality with the largest dip in apartment condominium starts was Saanich, where none were started during the first quarter of 2008. In the first quarter of this year, no new apartment condominium units were started in Saanich, while over the same period last year 46 units broke ground (refer to Table 1.1).

Despite the fact that quarterly Victoria new home starts (total) dropped, the number remains in line with historical

averages – see Figure 1. In the short-term, starts will remain in line with the historical average as socio-economic indicators for Victoria remain positive. The drivers of new home demand in Metro Victoria include low mortgage rates, increasing employment, and stable in-migration. Victoria employment experienced significant growth in the first quarter of 2008; increasing six per cent (Figure 2).

While the number of new home starts has dropped off relative to the first quarter of 2007, there has been an increase in the number of homes currently under construction in Metro Victoria. The increase is largely due to apartment condominium developments in Colwood, Victoria City and View Royal (refer to Table 1.1). Contributing to the increase in the number of apartment condominium units under construction is that many developments are increasingly complex and some also take longer to complete due to complications in scheduling workers.

In addition to growth in the number of units currently under construction, the number of completed units has also increased in both monthly and quarterly terms. With 213 new homes completed in March and 560 in the first quarter, this represents a significant increase from the levels recorded in 2007. In terms of dwelling type, the number of completed single-

family units in the Capital Region fell while multiple-family completions grew considerably in the first quarter. Notably, apartment condominium completions tripled in the first quarter. Two specific municipalities accounted for the bulk of the apartment condominium completions growth in Metro Victoria - Saanich and Victoria City.

First quarter completions growth outpaced the increase in absorptions, contributing to a rising inventory of new homes in Victoria. In the span of a year, apartment condominium inventories have increased from 27 to 154 units, accounting for more than half of the total inventory of new homes. While the total inventory of new homes in Victoria has increased relative to the first quarter of 2007, the inventory of single-detached new homes dipped. This drop in inventory was accompanied by an 18 per cent increase in the average price of absorbed new single-detached homes. The price increase was buoyed by rising prices in both Saanich and Langford (refer to Table 4.1), and the average price has now surpassed \$689,000.

Significant Growth in Metro Victoria Resale Home Prices

The Victoria resale market experienced moderate change in the

first quarter, with overall sales dipping and active listings increasing (refer to Table 5). As a result, the sales-to-active listings ratios declined for each of the three major components of the resale market (single-family, townhouses, and condominiums). Despite the increasing number of active listings, the average MLS® price rose in all three market components.

Single-Family: While there was a moderate increase in first quarter single-family MLS® active listings, there was a substantial decrease in sales. This resulted in a lower sales-to-active listings ratio, but the average single-family resale price continued to grow, rising by 12 per cent in the first quarter of 2008.

Townhouses: The average sales price of a Victoria townhouse rose 16 per cent in the first quarter of 2008, reaching \$436,100. While quarterly sales remained stable, active townhouse listings increased considerably relative to last year (42 per cent).

Condominiums: As new apartment condominium projects complete, active listings of new and existing apartment condominiums are rising. However, the quarterly sales to active listings ratio dropped significantly relative to last year. This is representative of a significant decrease in sales and an even larger increase in active condominium listings.

March's level of active condominium listings reached a 13 year high. While the condominium sales-to-active listings ratio is falling and suggests the market now favours buyers, the average price of a Victoria condominium continued to grow in the first quarter (see Figure 3), due largely to the greater proportion of newer condominiums being sold. The nine per cent growth in the average resale price was lower than that achieved by the single-family and townhouse market segments, and in line with the lower sales-to-active listings ratio.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
