Date Released: July 2008

Victoria Home Starts on Par with First Half of 2007

Home builders in Metro Victoria remain busy despite a lower level of starts in June. The Victoria CMA recorded a more than 50 per cent drop in the number of new homes breaking ground in June (relative to June 2007). The 1,217 total starts recorded year-to-date is on par with the total observed over the first six months of 2007 (see Figure 1). The trend to denser housing types continued with single-detached starts

declining compared to the first half of 2007, while multiple-family starts have edged up.

Consistent high levels of housing starts data during the past year have boosted the number of homes under construction, particularly in the multi-family sector. There were eight per cent more multiple-family homes under construction in June than there were in June of last year. The number of single-detached

homes under construction has lagged so far in 2008. As of the end of June, there were nearly 3,400 housing units under construction in the region; with multi-family homes accounting for roughly 80 per cent (see Figure 2). The large share of multi-family homes under construction suggests that over the next 18 to 24 months, more of these homes will be completed and coming on to the market.¹

The number of completed dwelling units edged down in June 2008, but the year-to-date number continues to exceed 2007's level. During the first six months of the year, 1,072 units were completed in Metro Victoria, with roughly two-thirds of these were multi-family homes. A large portion of the recently completed multi-family homes are located in the City of Victoria and Saanich.

While the number of completions fell, there was a larger decline in the number of absorptions in June. More homes are being completed than absorbed, indicating that the supply of new homes entering the Victoria market is outpacing demand and adding to the inventory. While year-to-date new home sales are down, the average new single-detached

home price was \$662,000 – an eight per cent increase from last year.

At the end of June, the inventory of new homes (single-detached and multi-family) in Metro Victoria sat at 267 units, the highest it has been in eight years. This increase can be attributed entirely to a larger multi-family inventory. Since last June, the inventory of newly completed single-detached homes has declined, but the inventory of multi-family homes has more than doubled.

More Homes for Sale in Victoria

The Metro Victoria resale market has cooled during the first half of 2008, with fewer resale transactions, an increase in the number of homes for sale and a slowdown in the pace of price growth. In the first half of this year, 3,342 total sales were recorded, a 15 per cent drop relative to the first six months of last year. While housing demand has softened, supply (as measured by active listings) has increased 35 per cent. Despite the more balanced supply and demand conditions, existing home prices continue to rise in each segment of the market (single-detached, townhouse, and apartment

condominium). The average MLS® sale price jumped nine per cent compared to the first half of last year, reaching \$480,000.

Sales in all three components of the resale market have fallen over the first six months. Notably, single-detached and condominium resale transactions were down 17 per cent. While sales have dipped considerably, each component's year-to-date sales surpass their 15-year average for January to June period.

The rising supply of homes is contributing to the softening of the Victoria resale market. The number of active listings in Metro Victoria currently sits at 2,879, with the single-detached and apartment condominium components each accounting for 44 per cent of the supply. The apartment condominium sector has experienced the most robust growth since last year, increasing 48 per cent compared to June 2007.

For all three sectors of the resale market, the sales-to-active listings ratios have fallen, indicating that the respective markets are moving towards more balanced supply and demand conditions. Despite these developments, prices continue to rise. Relative to the first six months of last year, the average single-detached, townhouse, and condominium prices have increased 11 per cent, ten per cent, and five per cent, respectively.

Footnotes:

¹ Note that not all units currently under construction will enter the market once complete, as some are pre-sold.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
