New Home Market

New Home Construction Strengthens

Demand factors remained positive for new home construction activity in the Peterborough Census Metropolitan Area in 2007. Low mortgage rates, strong job creation and inmigration continued to be key drivers supporting housing demand this year. The strong fourth quarter

construction pushed housing starts in 2007 to 540 units, up 23.6 per cent from 2006. Construction strengthened for both single-detached and multiple-family homes and across most CMA municipalities.

While positive employment and historically low mortgage rates supported new home construction, Peterborough's abundant supply of relatively more affordable homes remained the magnet for home buyers from the Greater Toronto

Area where prices are higher. Despite rising new home prices, Peterborough's average price of a new single-detached home remained lower compared to many of the more expensive neighboring Toronto markets, helping to sustain home buyers' interest in Peterborough.

Strong demand from homebuyers reaching their more affluent middle age years supported construction of the more expensive single-detached homes. For instance, the number of new homes priced above \$450,000 more than doubled, from 26 units in 2006 to 55 units in 2007. Tight resale market conditions through much of 2007 translated into less choice for home buyers and were partly responsible for the increased spillover of demand to the new home market. Move-up buyers looking to trade-up into a new and more expensive single-detached home accounted for a substantial share of the new home buying activity, helping to drive up housing starts in 2007.

Prices of new single-detached homes continued to advance in 2007. The average price of a new single-detached home in the Peterborough CMA rose 14.7 per cent to \$342,152. Despite the rising prices, inventories of new single-detached homes as measured by the number of units not yet sold at completion remained stable at 32 units at the end of 2007 from 35 units a year earlier, indicating that demand for single-detached homes of all price ranges continues to remain strong.

Resale Market

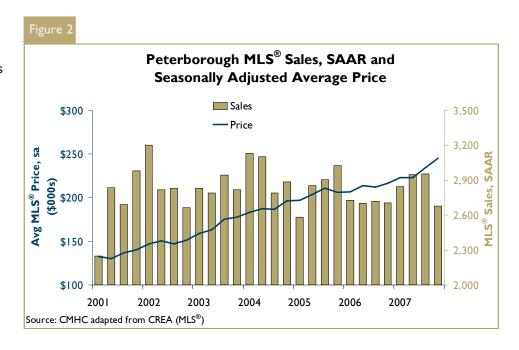

Second Highest Sales Ever

Peterborough's resale market recorded a high level of sales as low mortgage rates, high employment levels and in-migration continued to stimulate housing demand. Existing home sales increased by 7.1 per cent compared to 2006, helping to bring existing home sales to their second highest level ever. MLS® sales were only 100 units (i.e. 3.4 per cent) lower than the record set in the previous record year.

The sales-to-new listings ratio (SNLR), a leading indicator of future price growth and current market conditions, moved up to 56.6 per cent, compared to 54.7 per cent in 2006. In line with the tightening of the resale market in 2007, Peterborough recorded a stronger pace of home price

appreciation compared to the previous year. The average resale price rose by 8.5 per cent to \$231,596 in 2007, more than double the 3.5 per cent rate for the previous year. A SNLR above 55 per cent is usually associated with price growth exceeding the general rate of inflation, shorter listing periods and increased bidding wars.

Detached homes were generally more expensive in Peterborough's suburban areas and for cottage/ recreational properties and homes with water frontage. Given their higher average price, these properties also took generally longer time to sell. In general, demand strengthened for homes priced above \$180,000. Homes in this category accounted for 61 per cent of the total sales, and recorded an increase of 24 per cent in home buying activity in 2007.

Local Economy

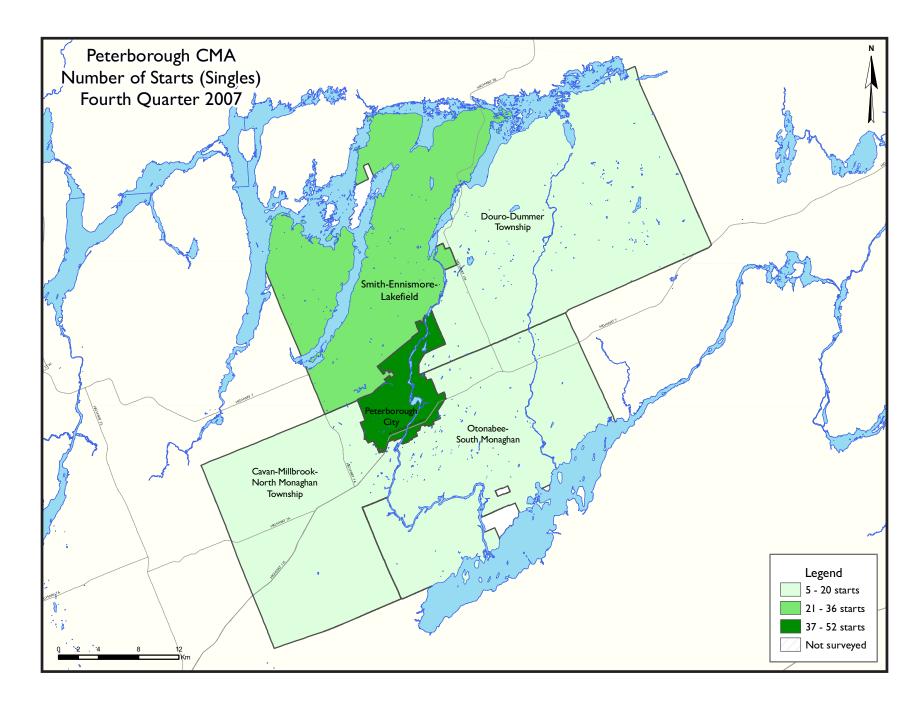

Record Employment Levels

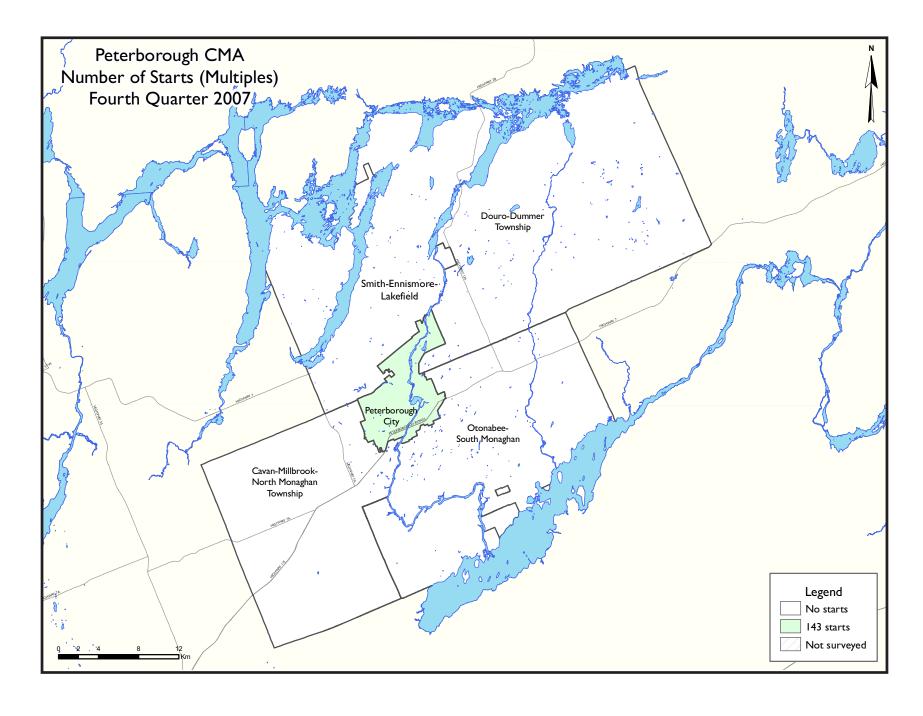

New jobs continued to be one of the most important drivers support-

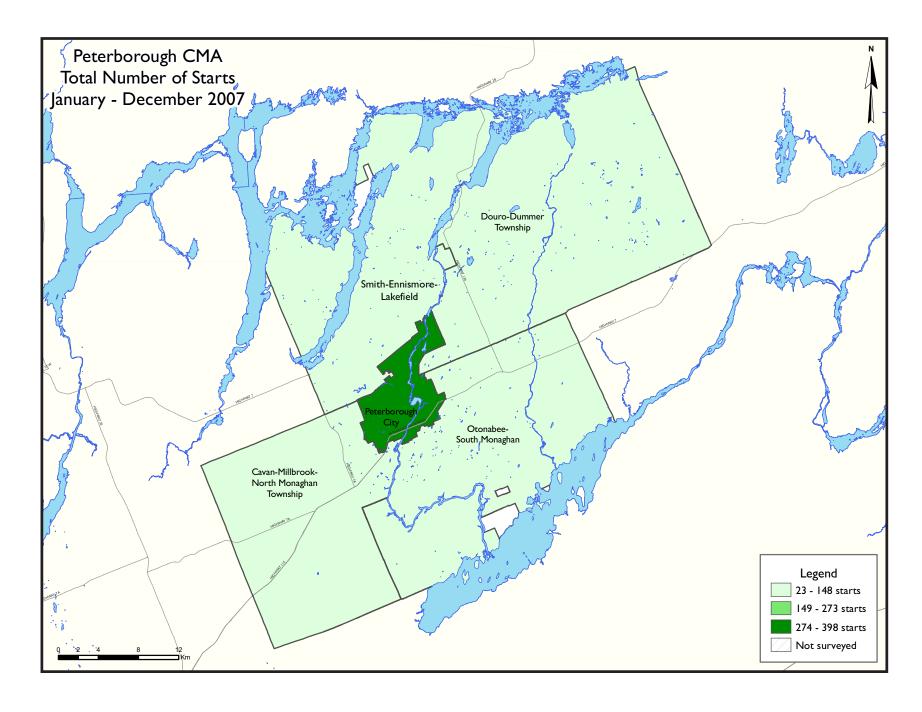

ing housing demand. Year-to-date employment moved up by 5.1 per cent in 2007 compared to the previous year. Strong job creation in 2007 resulted in record employ-

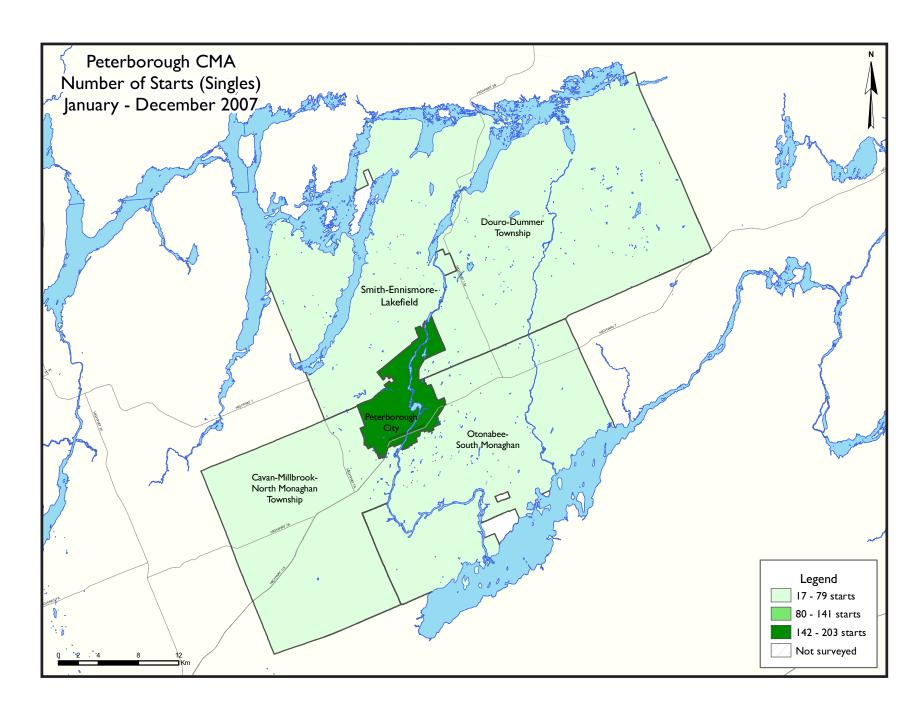

ment level for Peterborough, helping to reverse job losses recorded in 2006, when employment declined by 3.5 percent compared to the previous 2005 record.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/housingmarketinformation

For more information on MAC and the wealth of housing market information available to you, visit us today at www.cmhc.ca/housingmarketinformation

To subscribe to priced, printed editions of MAC publications, call I 800 668-2642.
