New Home Market

Townhouses Keep New Home Starts Elevated in Second Quarter

New home starts in the Hamilton and Brantford Census Metropolitan Areas (hereafter referred to as Hamilton and Brantford) last quarter were strong, increasing 23 and 42 per cent, respectively, compared to the same period

last year. Strong starts of semi-detached homes and townhouses in Hamilton and townhouses in Brantford last quarter accounted for some of the increase. First half total starts are also up in Hamilton and Brantford by 18 and 30 per cent, respectively, from last year.

Although single-detached homes continue to account for approximately half of total starts in the Hamilton market, they fell behind by

2 per cent last quarter as compared to last year. At the same time, starts of semi-detached homes, townhouses and apartments picked up the pace, rising 63 per cent over last year. Semi-detached starts more than doubled, townhouse starts (both freehold and condominium) increased by 76 per cent, and apartment starts also rose by 17 per cent. Condominium townhouse and apartment starts alone have increased by 86 per cent this year.

Although starts of single-detached homes were lower last quarter, their prices continue to flourish. The average price of a new single-detached home in Hamilton increased to \$410,000 in the first half of 2008, a 16 per cent increase from the same period last year. Average prices rose in all municipalities of Hamilton, although the price appreciation was most pronounced in Dundas, Glanbrook and Flamborough. In Dundas, the average year-to-date price increased 30 per cent compared to the first half of 2007 to \$536,000.

In Brantford last quarter, townhouse starts rose to 46 starts, compared to just 6 starts in the same period last year. Single-detached starts also rose by 12 per cent to 124 units.

Resale Market

Moderate Demand in Resale Market

The resale market in Hamilton and Brantford held strong in the second quarter, though conditions were more temperate as compared to the previous year. Sales have eased in Hamilton and Brantford and listings

have increased as a result of sellers' expectations from the previous year, when price appreciation was well above the inflation rate.

In Hamilton, there were 4,141 sales of existing homes, off 5 per cent compared to last year. However, the salesto-new listings ratio of 65 per cent indicates that Hamilton is in a sellers' market. The market tightened up into the end of the quarter as the busiest home purchasing season commenced and average prices rose, keeping in line with sellers' market conditions. To date, although sales are down, the average price of an existing home in Hamilton is \$285,700, up 7.5 per cent compared to the first half of the year in 2007. It is important to note that average prices varied by municipality and home type. The majority of sales occurred in the Burlington and Hamilton Mountain areas last quarter.

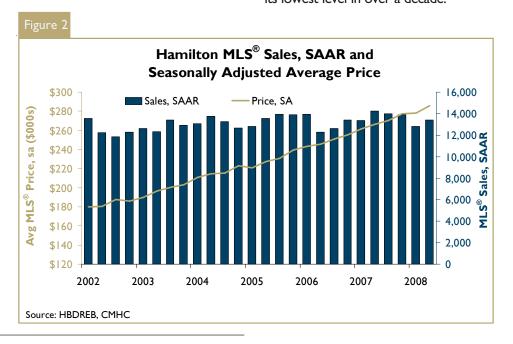

In Brantford, sales decreased modestly by 2 per cent last quarter to 460 units, though over half of all newly listed homes were sold during

the period, resulting in a healthy balance between sales and new listings. The average price of an existing home in Brantford year-to-date is \$220,600, up 6 per cent from the first half of 2007.

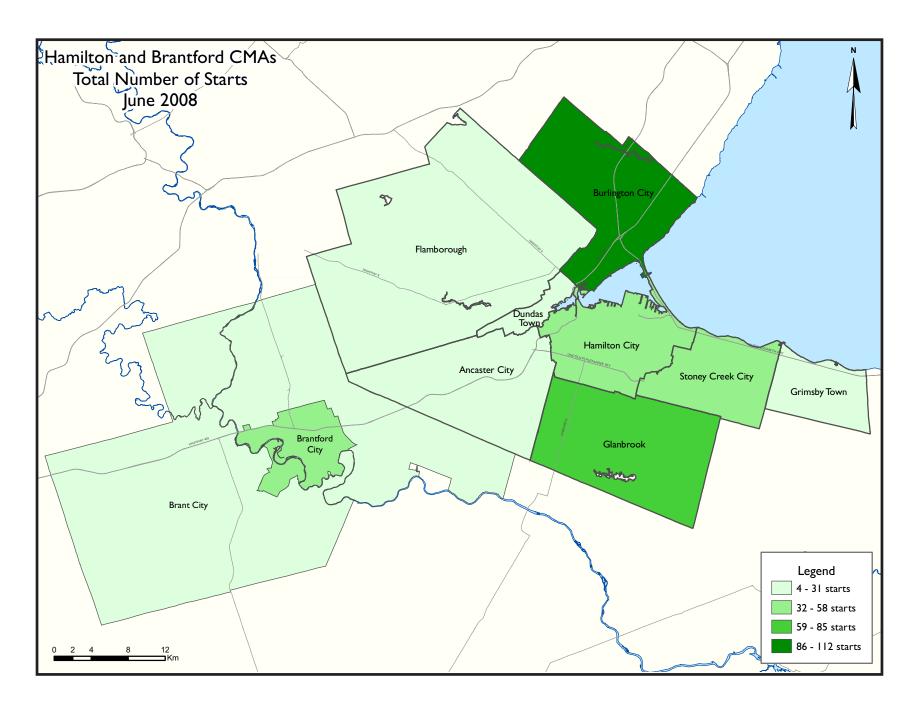

Economic Overview

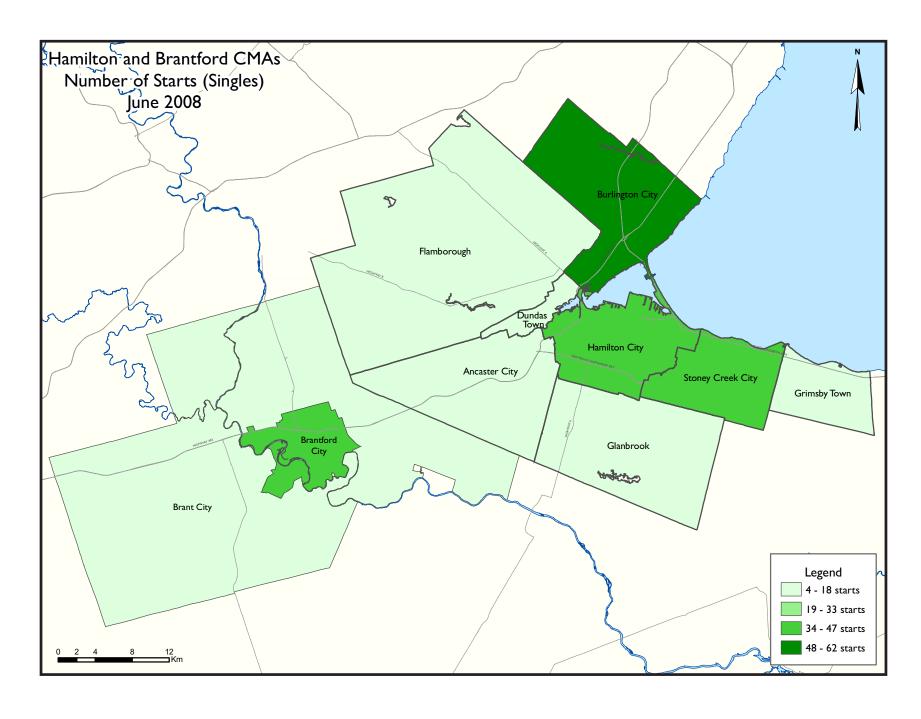

Local Economy Holds Steady

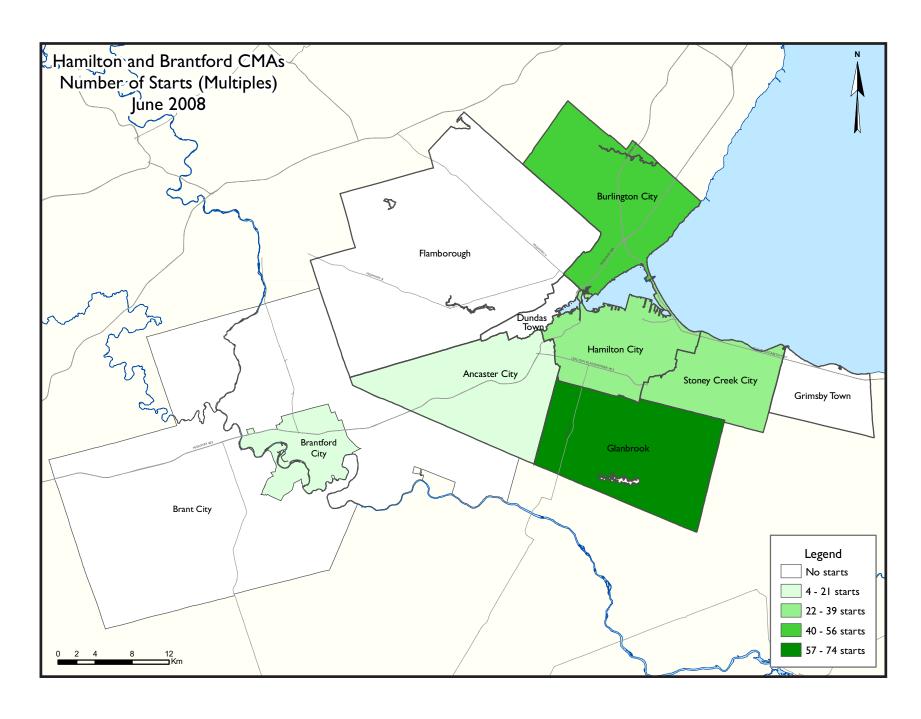

This year, existing home sales have cooled as consumer confidence in the economy continues to decline. Some consumers may be wary of making bigticket purchases such as a home or car. However, Hamilton's total unemployment rate remained relatively unchanged at 6.3 per cent last quarter compared to the same time period last year. One factor keeping the unemployment rate stable is the record high level of service sector employment, which has offset some job losses in the manufacturing sector. Manufacturing sector employment in Hamilton has hit its lowest level in over a decade.

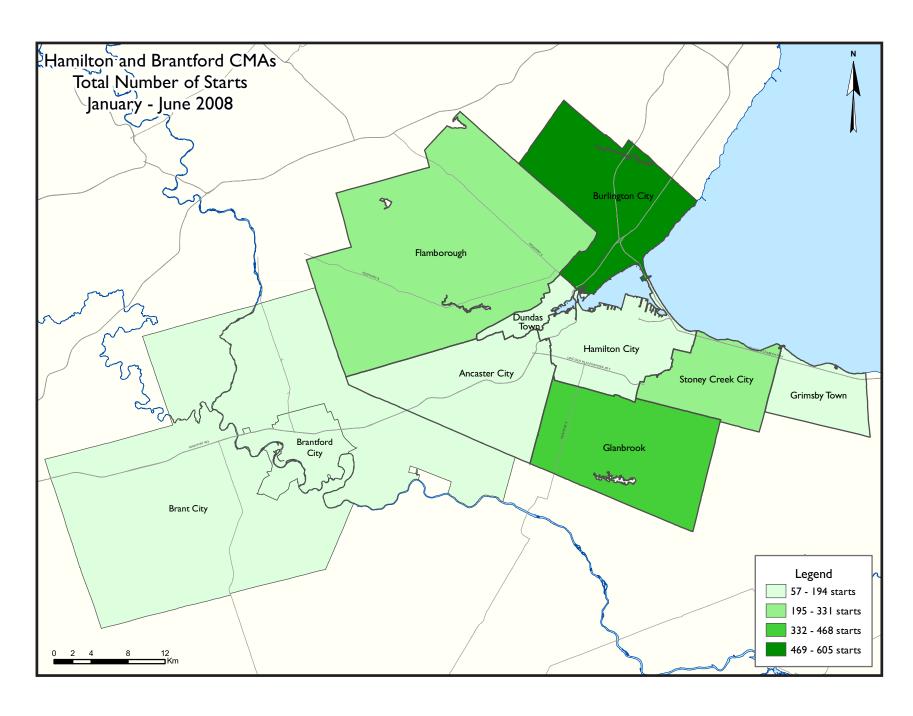

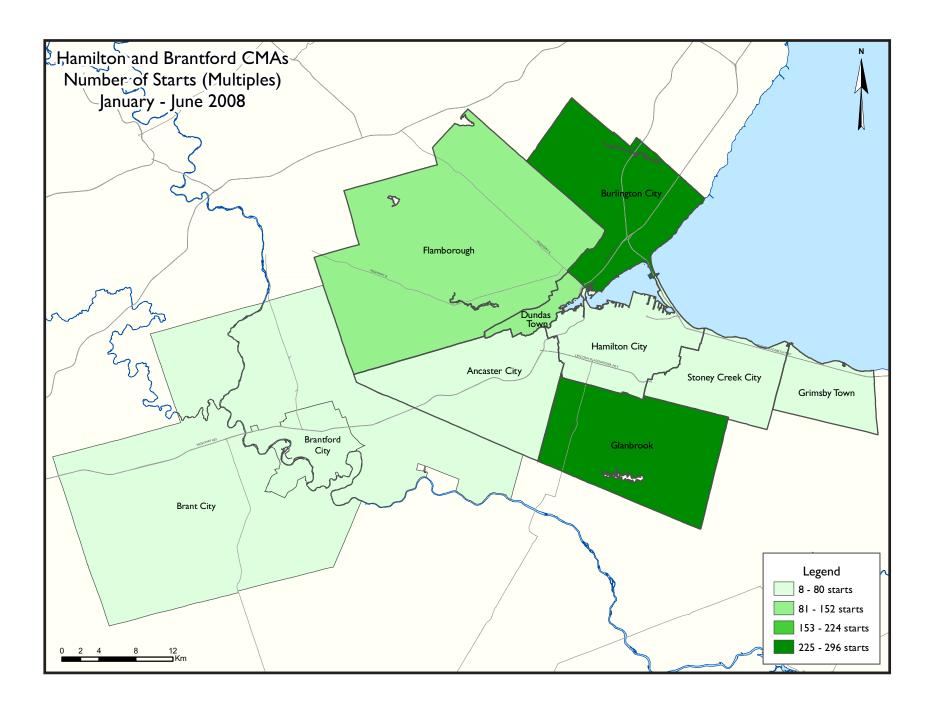

A market with an SNLR above 55 per cent and prices rising above the rate of inflation signifies sellers' market conditions. Alternatively, a market with an SNLR below 32 per cent indicates buyers' market conditions and a balanced market occurs when the SNLR is between 32 and 55 per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
