Canada Mortgage and Housing Corporation

Date Released: First Quarter 2008

New Home Market

Kingston Single Starts at a Three-Year High

Single-detached home starts in the fourth quarter outpaced last year's performance, growing to a three-year high since the fourth quarter of 2005. Single housing starts rose to 203 units in the fourth quarter of 2007, up 112 units and 42 units from the same period in 2006 and

2005 respectively. Total starts in the fourth quarter of 2007 reached 240 units or 100 units higher than the number recorded in the same period in 2006. The increase was mainly due to stronger than expected single housing starts in Kingston City. On a submarket basis, 2007 single-detached home starts were up across the Kingston CMA except in the Frontenac Islands. Despite the growth in single-detached home starts in the fourth quarter, the

increase was not enough to offset a sharp fall in multiple-family home starts, leading to a nine per cent decline in 2007's total starts.

Multi-family housing activity fell to 37 starts in the fourth quarter. There was a slight increase in semi-detached and row unit starts. Apartments generally dominate multiple housing starts in Kingston. However, there were zero apartment starts in the fourth quarter of 2007 as a result of the high level of apartment construction in 2006 and early 2007. Consequently, the weaker performance in the fourth quarter dropped 2007 multiple starts to 280 units or 207 units fewer than the 2006 level.

The fourth quarter average price for a new single-detached home dropped by 11 per cent compared to the same period in 2006. On a submarket basis, average price for new single-detached homes were down across the Kingston CMA except in South Frontenac. The sharpest decline in the fourth quarter of 2007 was recorded in Kingston City, where the average price dipped by 15 per cent. The priciest homes were built in South Frontenac, where the average price reached \$267,780.

While low mortgage carrying costs were a dominant factor boosting single new home construction in 2007, it certainly was not the only factor.

Employment growth in Kingston ended 2007 with an increase of 1,000 jobs compared to 2006. In 2007, the gains in employment outpaced the gains in the labour force, and as a result, the annual unemployment rate in Kingston dropped to 5.3 per cent from 6.2

per cent in 2006. This year's unemployment rate is considerably lower than the provincial unemployment rate of 6.4 per cent, a difference of 1.1 per cent. Most of 2007's job creation was a result of full-time employment growth, which has a stronger impact on housing markets than part-time employment gains.

Resale Market

Sales Dipped in Fourth Quarter

The seasonally adjusted MLS sales from October to December 2007 experienced a decline of 7.6 per cent compared to the same period in 2006, while the seasonally adjusted new listings jumped by 4.5 per cent. Despite a slowdown in the fourth quarter, the resale home market in the Kingston CMA enjoyed a strong year, posting the highest number of annual MLS sales since 2005. The 3,725 existing home sales in 2007 represent a 5.9 per cent increase

over the 3,517 units sold in 2006.

Resale homes have become more popular with first-time buyers, who are staying away from a move-up driven new homes market.

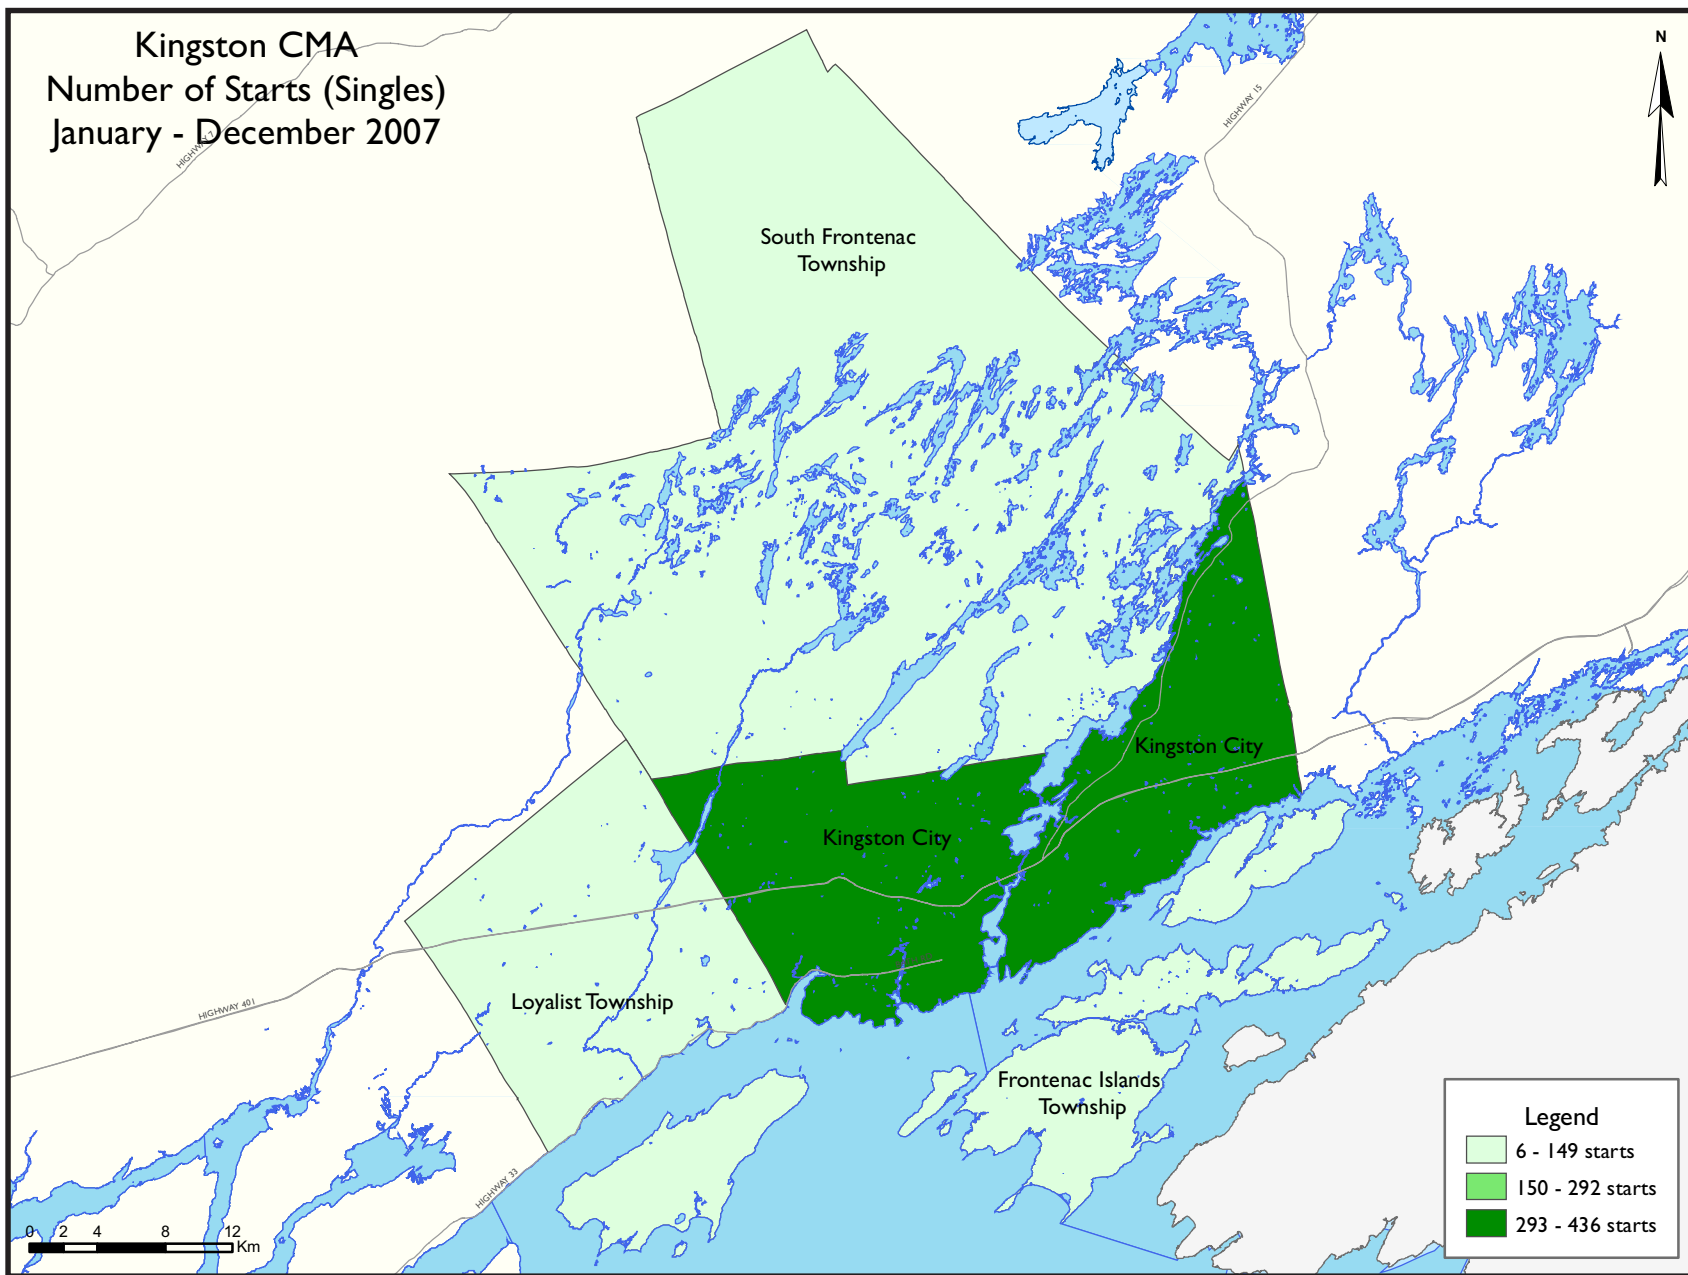

However, the fourth quarter numbers showed softening resale market as evidenced by the dropped seasonally adjusted sales-to-new listings ratio which fell to 52 per cent (the ratio ended 2007 at 55 per cent). Although the market has softened over the last three months, the rise in new listings has not put downward pressure on average price. Interestingly, the seasonally adjusted average price grew by 8.4 per cent in the fourth quarter, well above the annual increase of 4.8 per cent.

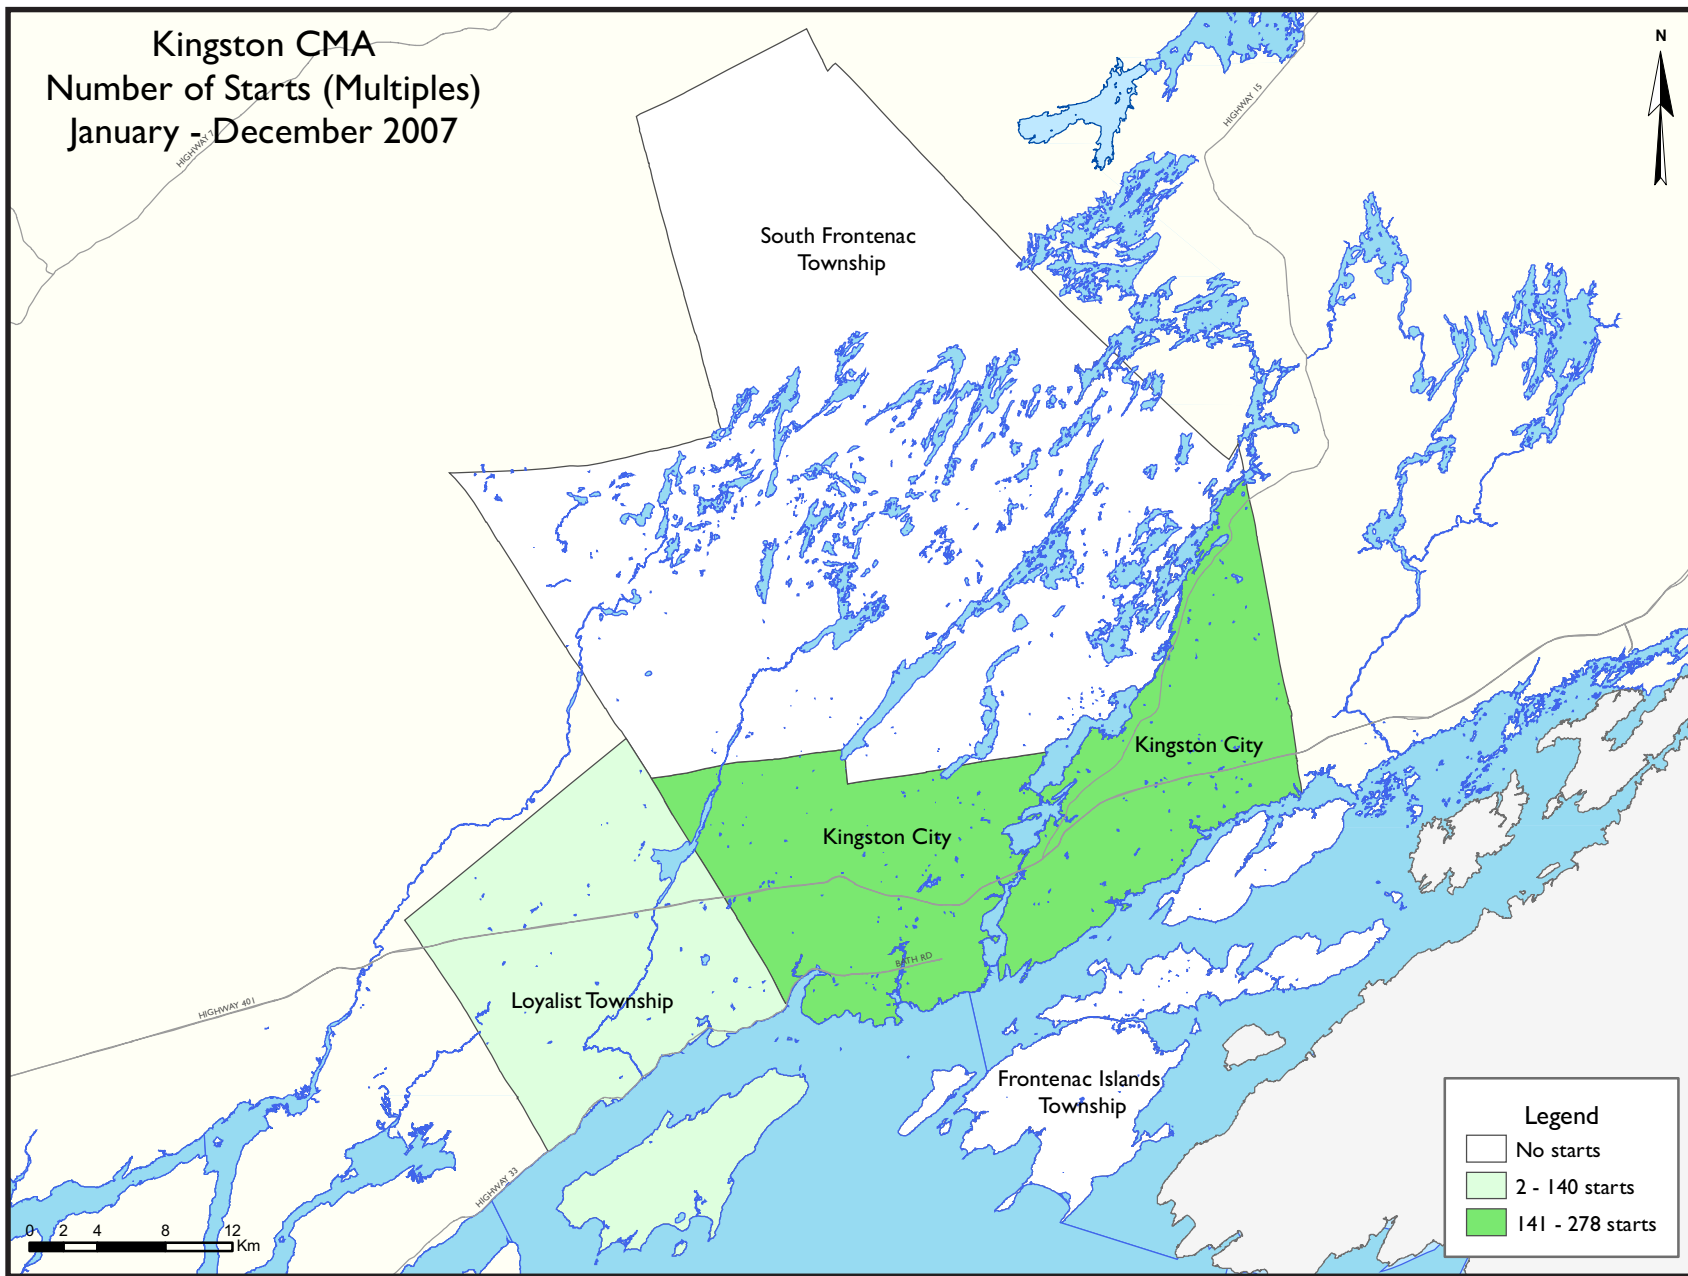

Nonetheless, the annual sales-to-new listings ratio may suggest that the robust price growth in the fourth quarter might not be sustainable in 2008. While the resale market surge seen in 2007 is unlikely to continue with the same magnitude, Kingston will remain firmly in "balanced" territory into 2008.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website.
