

HOUSING NOW

Kingston CMA

Canada Mortgage and Housing Corporation

Date Released: Fourth Quarter 2008

New Home Market

Fewer Total Housing Starts in Third Quarter

Total housing starts across the Kingston CMA fell to 260 units in the third quarter, a 24 per cent drop from 340 units recorded during the same period in 2007. The decline in housing activity this third quarter was a direct result of a decrease in

row and apartment construction. Row starts declined to nine units, a drop of 68 per cent from the same time last year, while the apartment segment reported no construction activity year-to-date.

On the positive side, however, single-detached starts showed a strong recovery in the third quarter. After two consecutive declines, single home starts rose 32 per cent to 233 units, compared with 176 units

Figure 1

registered during the third quarter of 2007. The surge in new singles may be considered as a come-back from a harsh winter that disrupted activity during the first quarter of 2008. Year-to-date, single starts in Kingston are running nine per cent ahead of last year's pace.

Meanwhile, semi-detached starts advanced by 12 units in the third quarter of this year compared to the same period in 2007. This represents a shift in first-time home buyers' demand away from single detached homes to less expensive town-homes and semis.

Single Detached Absorptions Pull Down Inventories

Increased new single-detached home sales continued to pull down the inventories of completed and unabsorbed units in the Kingston CMA. Approximately, 156 new single-family homes were sold between July and September, up 11 per cent from 140 units in the third quarter of last year. The third quarter increase in new home sales reflects a drop in the new single-detached average price. Year-to-date, price growth in the Kingston CMA has been negative. This shows a trend toward more modestly priced homes in the CMA.

After taking into account rising renovation costs coupled with decline in average price for new single-detached homes, the price differential between a modest new and existing single-family home appears negligible. Perhaps, this could also help explain the surge in single-detached starts. The average absorbed price of a new

single-detached home in the Kingston CMA fell from \$266,519 in 2007 to \$258,054 year-to-date in 2008.

Resale Market

MLS® Sales in the Third Quarter Exceeded the 2007 Levels

Supported by strong employment growth, Kingston's resale market posted marginal gains during the third quarter of 2008. Between July and September, a total of 993 homes were sold in the Kingston CMA, up from 978 units during the same period last year. Although the existing home market in the third quarter recorded an increase, it would be reasonable to analyze it with caution given the current economic uncertainty.

Meanwhile, the number of new listings reached a record high in the third quarter. A total of 1,779 homes were listed between July and September of

2008, up six per cent from the same period last year. With new listings outpacing sales, conditions in the resale market continued to remain in balanced territory. As a result, home price increases tend to slow – usually on par with the annual rate of inflation. Reflecting the overall temperature of the market during the three month period ending in September, the average existing home seasonally adjusted price grew by 3.8 per cent, down from the 8.4 per cent gains recorded in the second quarter of this year.

Economy

In Light of the Economic Uncertainty

The Kingston Census Metropolitan Area (CMA) employment advanced by 1.7 per cent in the third quarter as the public administration, educational service and health care sectors continued to support overall job creation. With the increase in resi-

Figure 2

Figure 3

Current Employment Share in Kingston CMA, by Sector

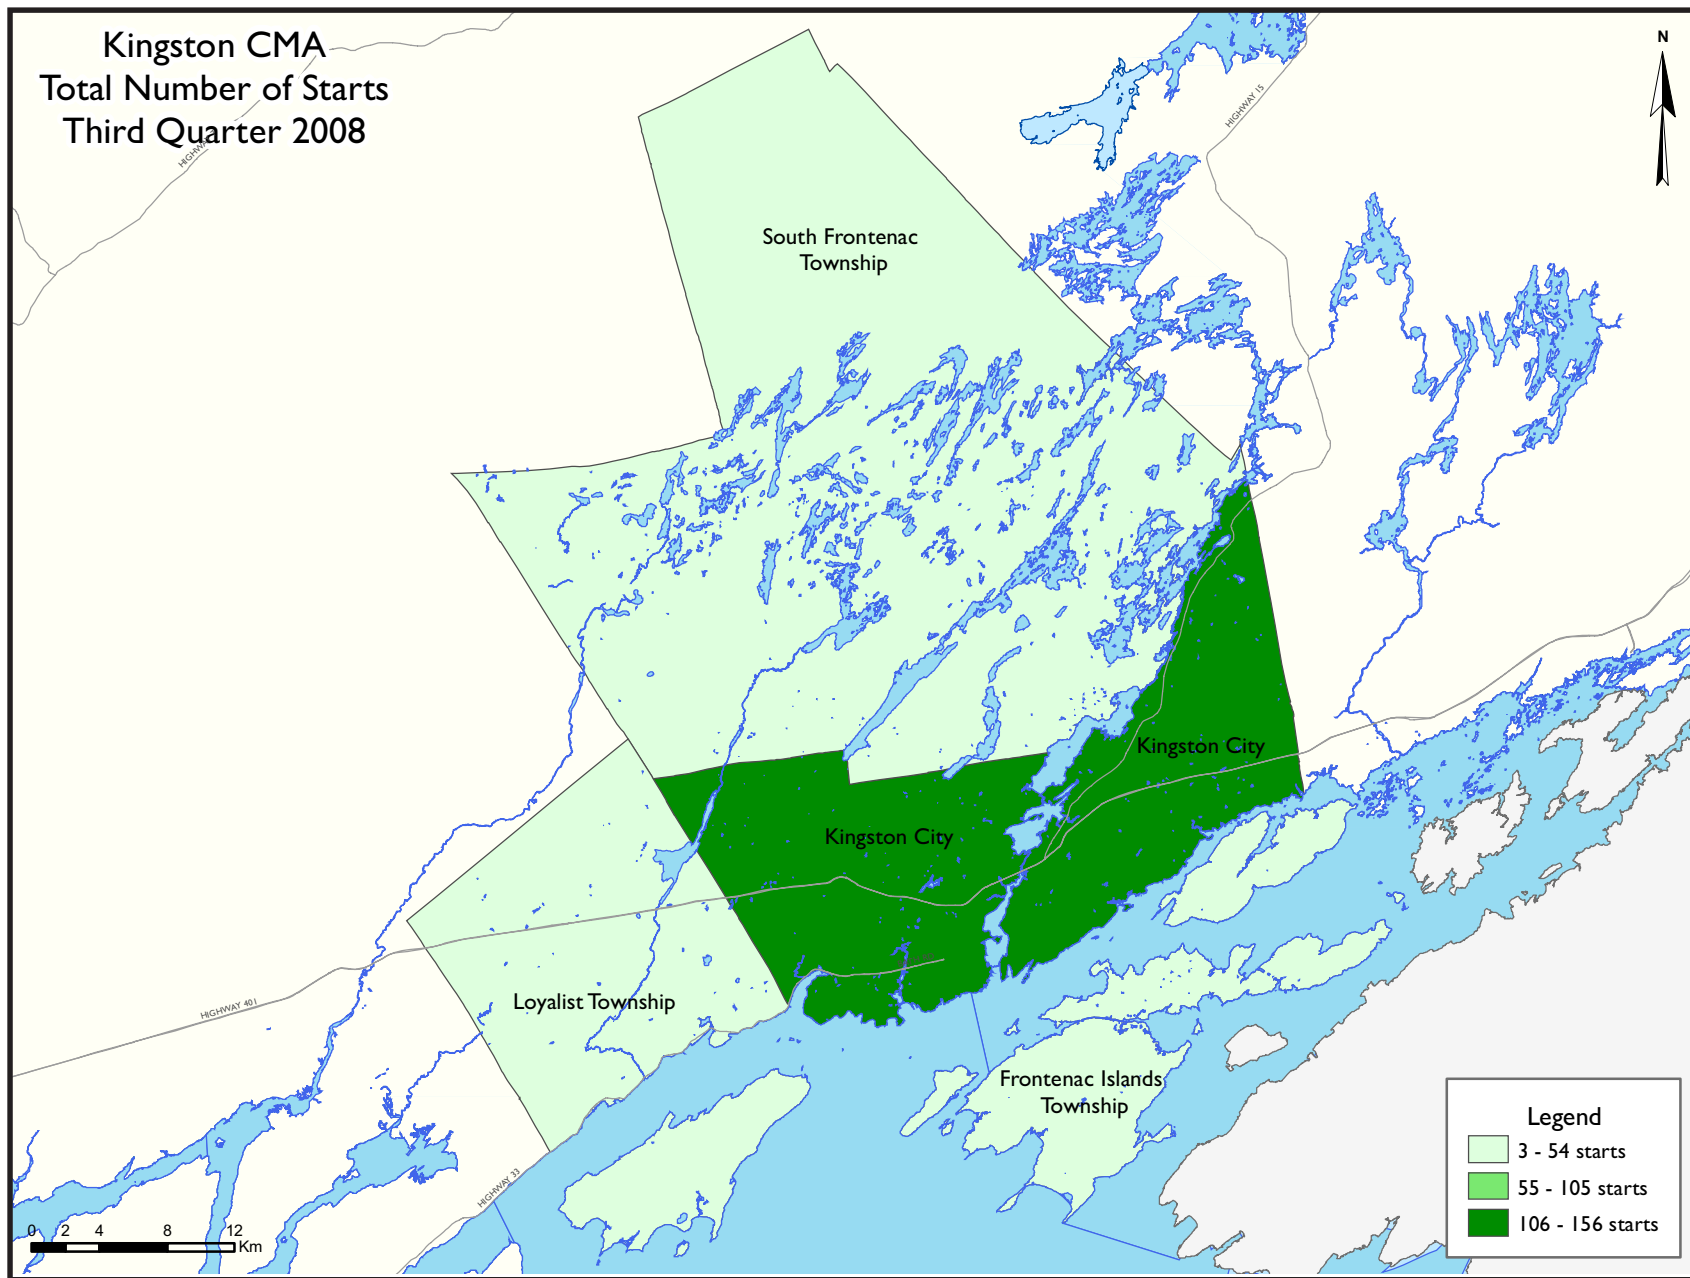

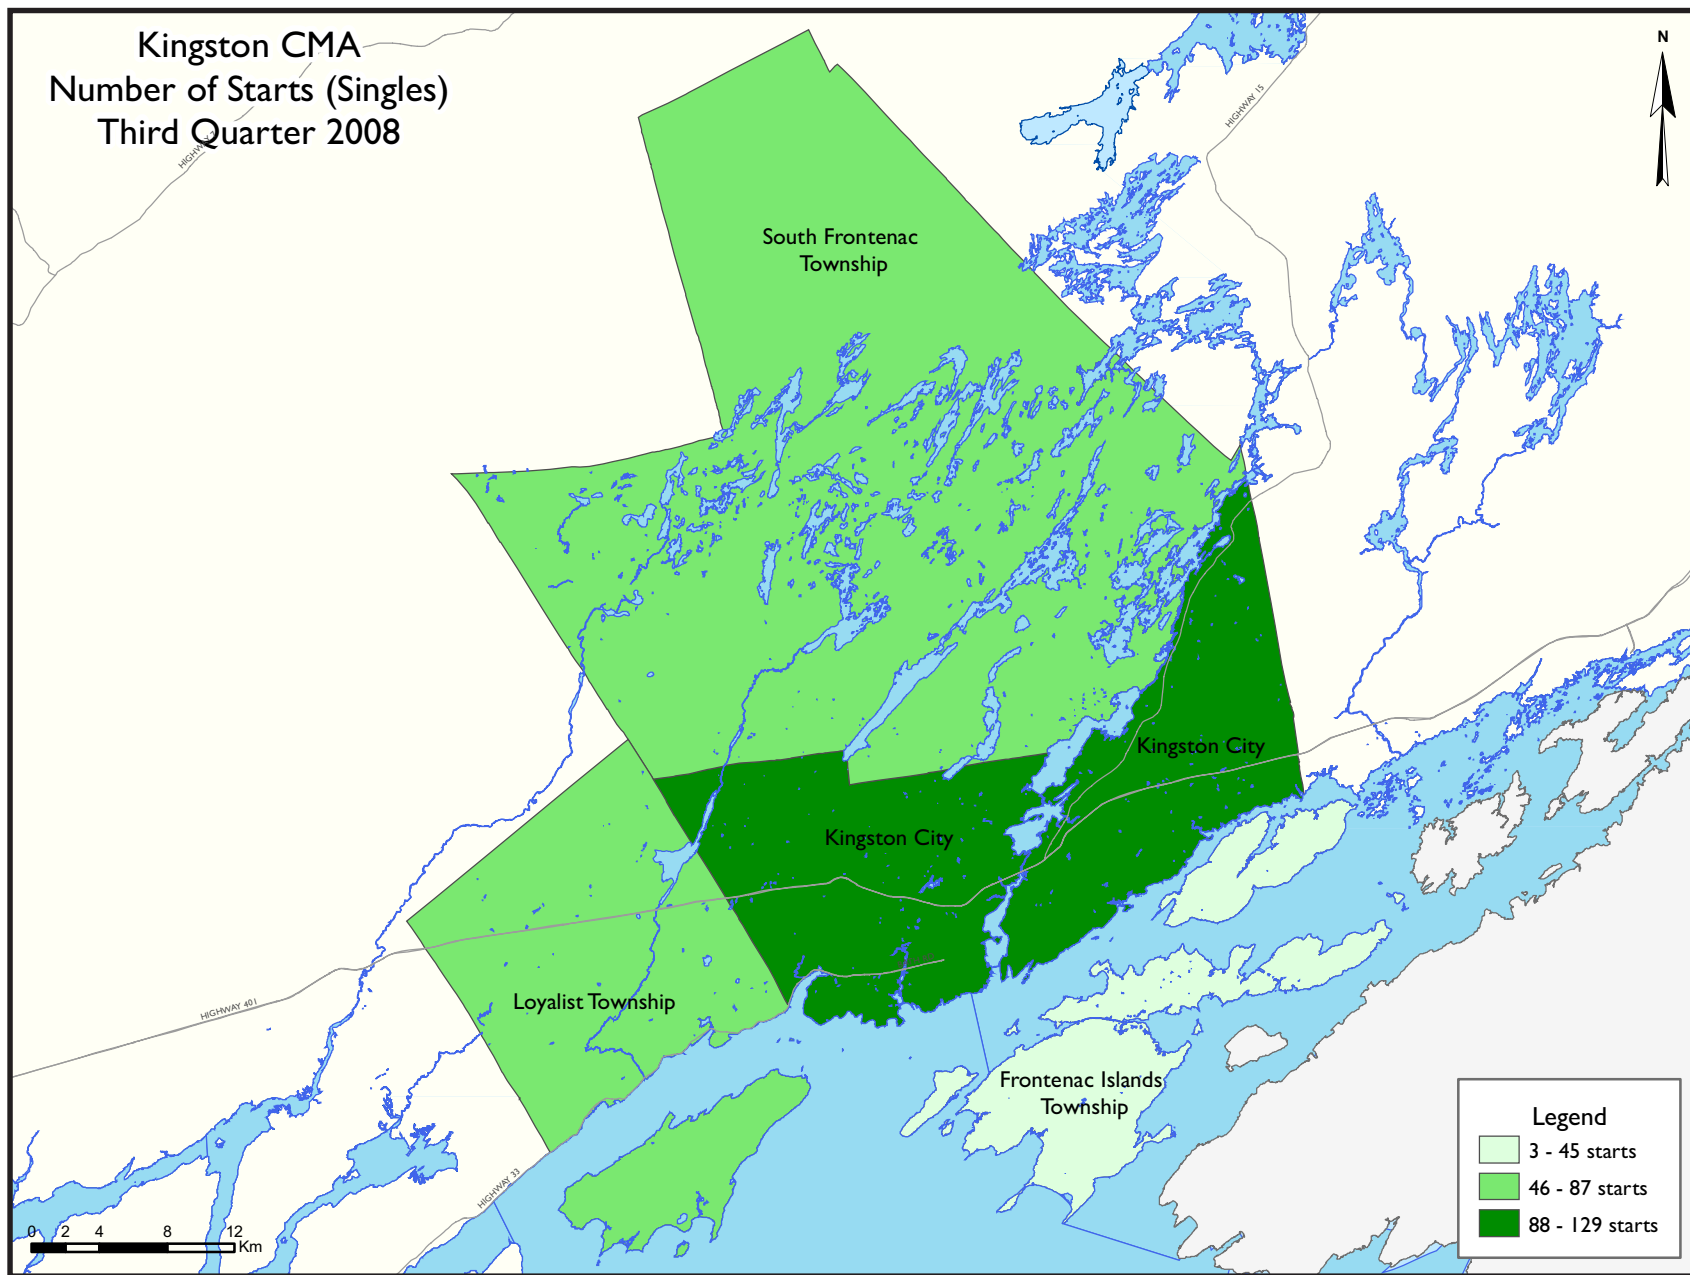

dential construction activity this third quarter, job growth in construction also contributed to the strong employment picture in the Kingston CMA.

Between July and September, Kingston's full-time employment grew by 2.8 per cent while part-time positions dropped 3.5 per cent during

the same period. As the main vehicle for buying a new or existing home, strong full-time job gains combined with historically low mortgage rate should help support the housing market in 2008.

On the down side, retail sales fell eight per cent in the third quarter, as consumers seem to have little appetite left for non-housing related items. Nevertheless, the diversity of Kingston's economy, together with the low concentration of manufacturing, has helped its economy maintain positive ground in a period of economic uncertainty. Therefore, the CMA should see marginal employment growth this year with the unemployment rate remaining flat.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
