Canada Mortgage and Housing Corporation

Date Released: First Quarter 2008

## New Home Market

## Higher New Home Starts in 2007

In both the Kitchener and Guelph Census Metropolitan Areas (CMAs), 2007 new home starts rose above 2006 levels. In the Kitchener CMA, the construction of multiple-family type dwellings pulled starts higher despite weaker single-detached

numbers. The reverse occurred in the Guelph CMA where single-detached starts were responsible for the increase in new home construction. While Kitchener CMA starts remained below the 40-year average, Guelph CMA starts were marginally higher.

In the Kitchener CMA, construction began on a total of 2,740 homes in 2007, up five per cent from 2006.

While single-detached starts dropped 25 per cent, stronger starts for all multiple-family home types pulled new construction figures higher. A limited amount of land readily available for immediate construction in many Kitchener CMA municipalities, especially in the first half of the year, restrained single-detached starts. Single-detached starts declined in all municipalities in the CMA, except Woolwich Township. The lack of choice for single-detached homes and higher ownership costs had potential home buyers looking for alternative types of housing such as a resale home or a more affordable multiple-family type new home. With the move to intensification and strong demand for more affordable housing, apartment construction, both rental and condominium, more than doubled in 2007. On a sub-market basis, all municipalities in the CMA, with the exception of North Dumfries Township, recorded double digit gains in multiple-family home construction.

Builders started 941 homes in the Guelph CMA in 2007, up nine per cent from 2006. While Guelph City actually recorded a slight decline in starts, starts in Guelph/Eramosa Township more than doubled. As land availability is not as much of an issue in the Guelph CMA and new home buyers prefer ground-oriented housing, single-detached housing starts increased by 19 per cent. On the other hand, multiple-family home starts declined marginally, led by a more than 60 per cent drop in apartment construction.

New home construction in the fourth quarter of 2007 in both the

Kitchener and Guelph CMAs exceeded the level recorded in the same quarter the previous year. Kitchener CMA fourth quarter total housing starts jumped by 40 per cent, while starts in the Guelph CMA increased by 34 per cent. Both single-detached and multiple-family (which include semi-detached homes, townhouses and apartments) home starts were responsible for the growth in new construction in the fourth quarter.

For 2007, the average price of completed and sold single-detached homes in the Kitchener CMA increased by ten per cent from the 2006 level to \$345,800. This increase was slightly above the nine per cent increase recorded in 2006. Increased land and construction costs pushed new home prices higher. More than 50 per cent of new single-detached homes in the Kitchener CMA are now priced above \$300,000. New single-

detached home prices in Guelph were up five per cent to \$360,900. As a result of the widening price differential between new and resale homes, homebuyers have been encouraged to search for their home in the resale market.

## Resale Home Market

### Record Resale Numbers in 2007

Demand for existing homes in the Kitchener-Cambridge-Guelph area was at a record level in 2007. Driven by in-migration, more home financing options and longer amortization periods, a high level of new listings and prices which are lower than new home prices, existing home sales were higher than average. The resale markets tightened up in the area as demand outpaced supply.

Figure 2

As a result, price growth was above the inflation rate.

Sales of residential properties through the Kitchener-Waterloo Real Estate Board set a record in 2007. A total of 7,031 homes changed hands, up 15 per cent from 2006 and more than 14 per cent higher than the previous record in 2005. Home ownership in the more affordable resale home market became increasingly attractive in 2007 thanks to longer amortization periods, a high level of employment and limited choice in the new home market. New listings had been trending higher and exceeded 10,000 for the first time as strong price growth enticed homeowners to list their homes for sale. Although new listings were up three per cent, sales outpaced this new supply and the market tightened up significantly. The sales-to-new listings ratio (SNLR), a leading indicator of home prices, edged close to 70 per cent in 2007. In Kitchener-Waterloo, a SNLR above 60 per cent indicates a sellers' market in which price growth is above the rate of inflation and where listing periods are shorter. The average price for a resale

home was \$252,400, an increase of six per cent from the level recorded in 2006. Single-detached homes were priced at \$283,100.

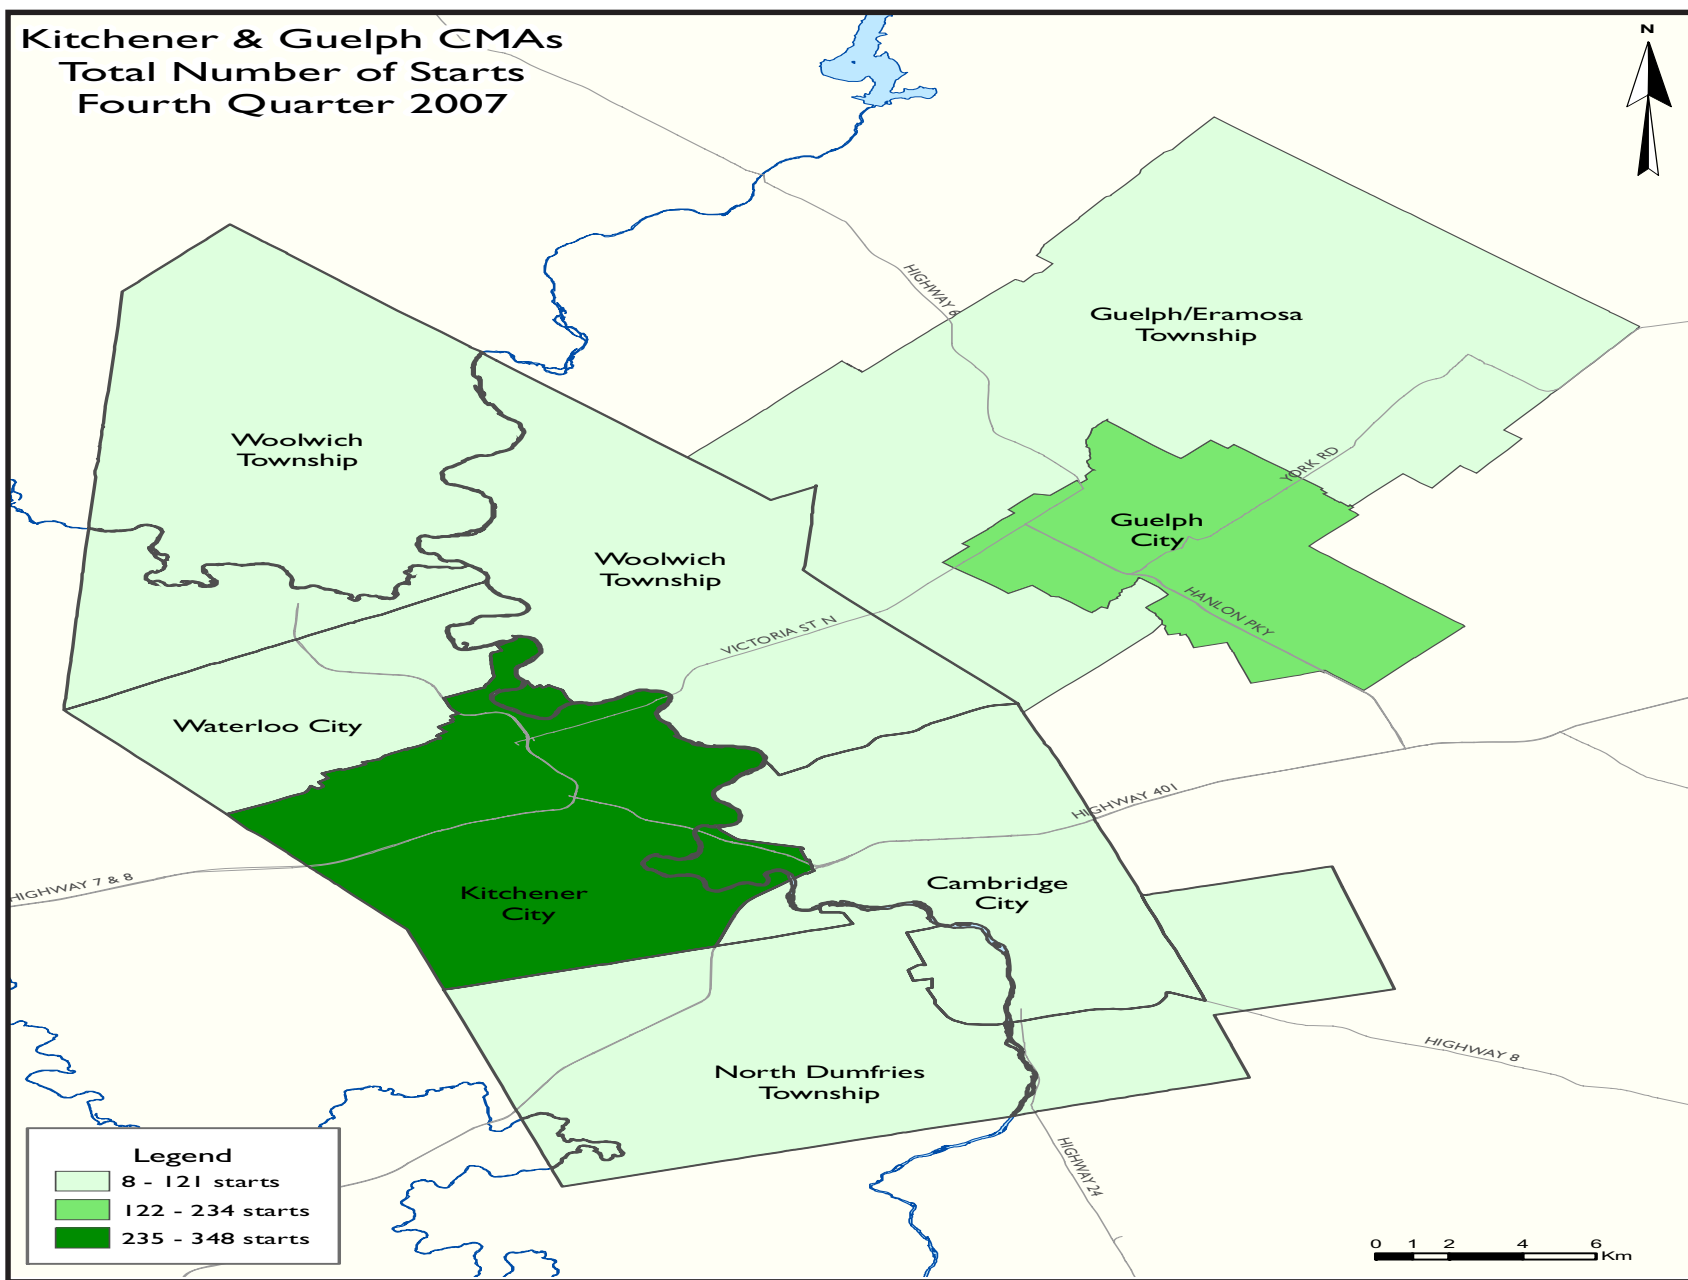

Sales of residential properties through the Real Estate Board of Cambridge Inc. reached a near record level in 2007. Existing home sales reached 2,999, up six per cent from 2006 and only slightly below the record level of 3,038 in 2005. Potential homebuyers looking for a home in Cambridge turned their attention to the resale home market as a low level of new single-detached home starts in Cambridge left them with little choice. New listings dropped by eight per cent in 2007 as a result of a slowdown in move-up buyer activity. With demand outpacing supply, the resale market tightened up considerably. The average resale home price increased to \$242,800, up five per cent from 2006.

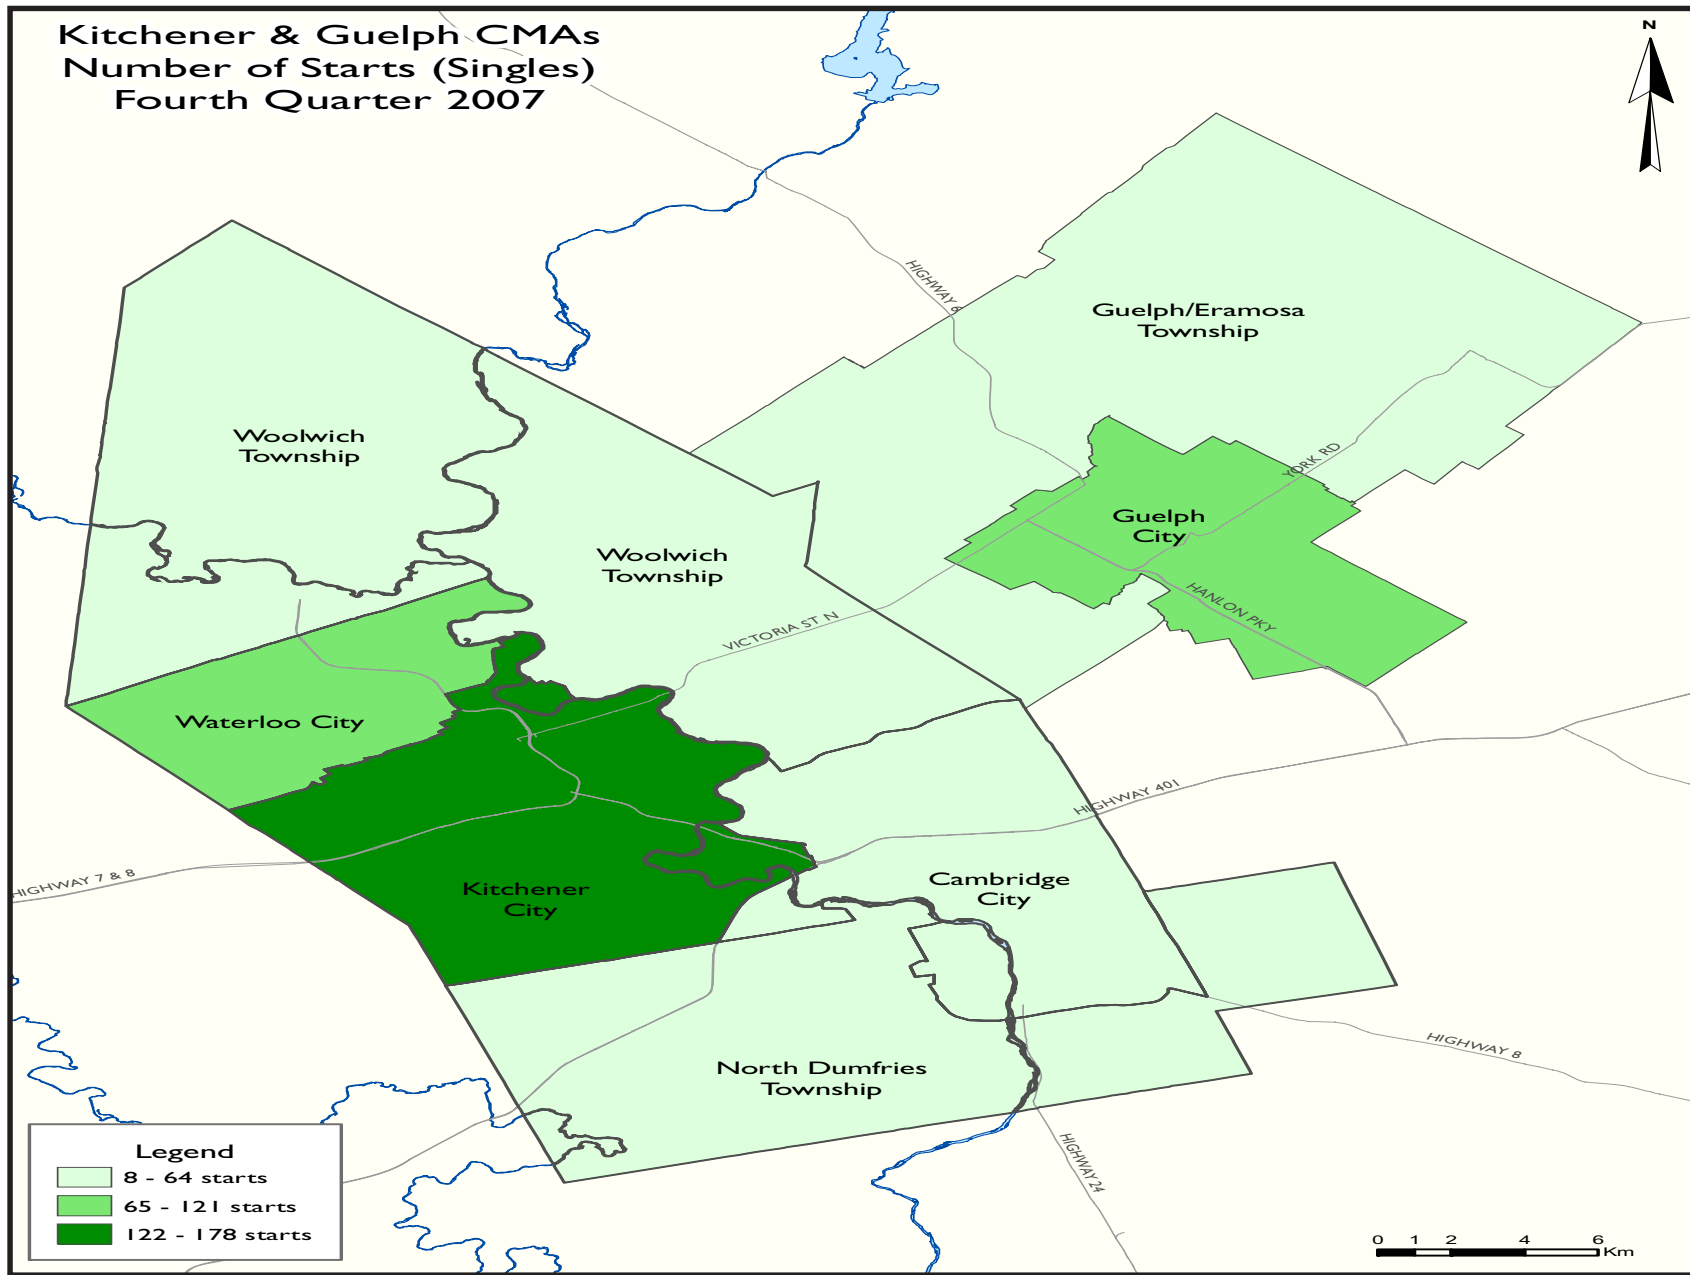

Residential sales through the Guelph and District Real Estate Board were at a record level in 2007. A total of 3,088 existing homes were sold, up eight per cent from 2006 and slightly higher than the previous record sales in 2005. Attractive mortgage

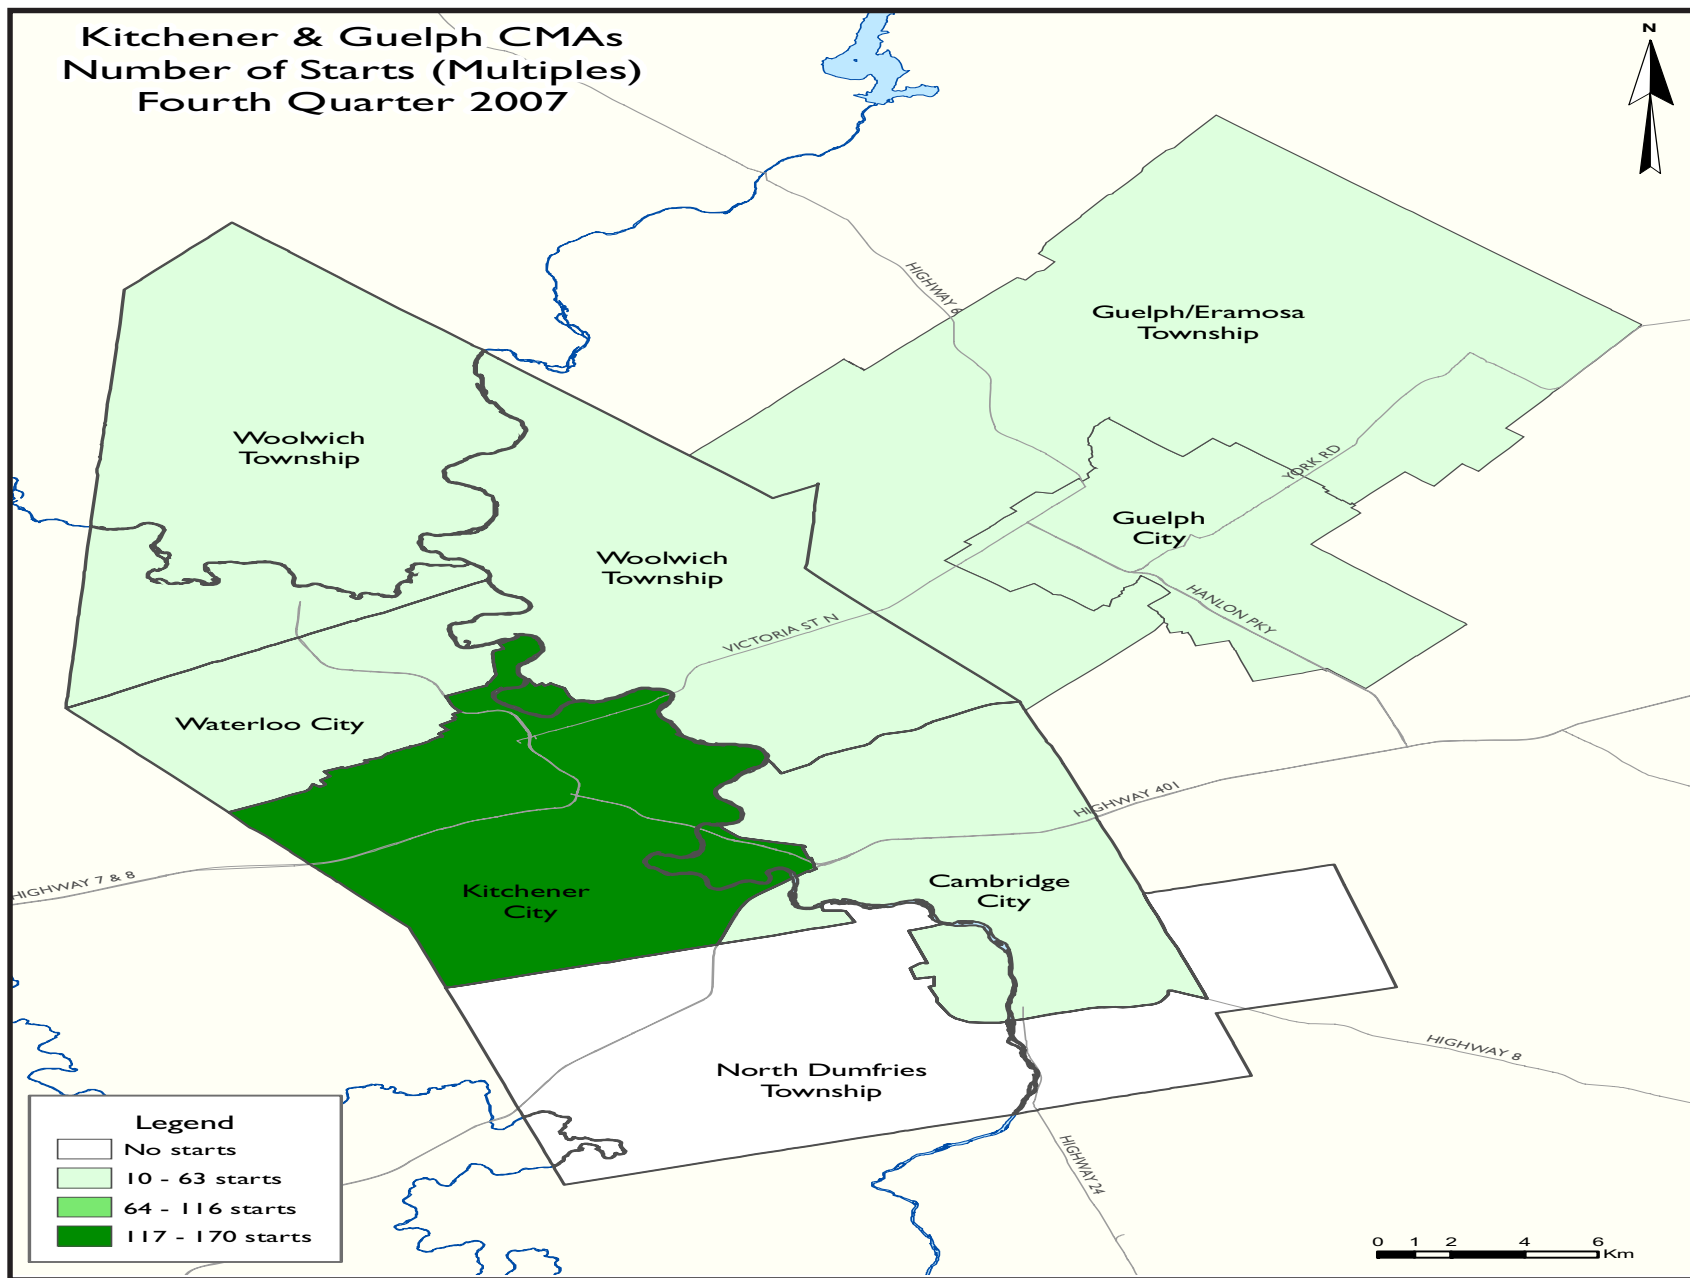

financing options brought homeownership within reach of more households. Homes newly listed for sale in 2007 dropped below the 2006 level, resulting in a tighter resale market. With a market favourable to sellers, the average resale price increased by seven per cent to \$262,200.

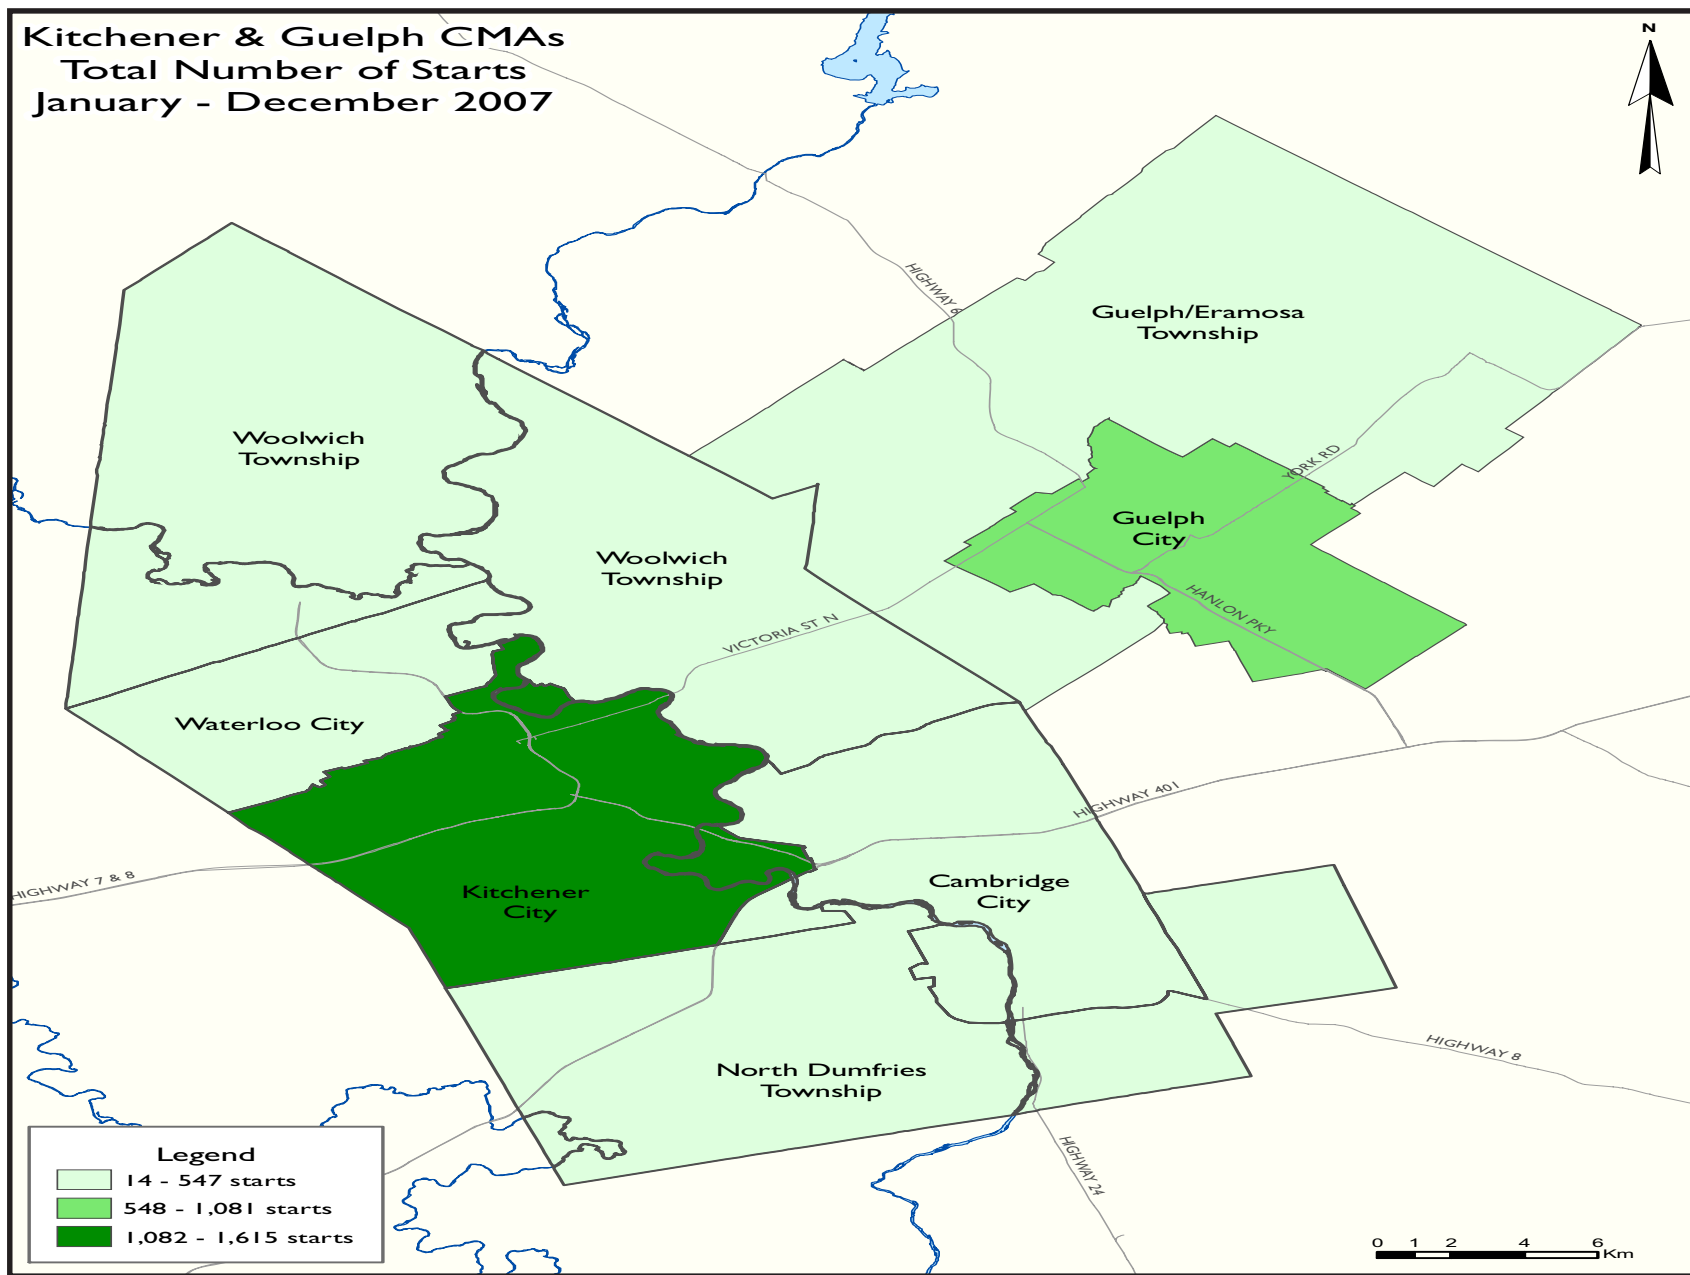

## Local Economy

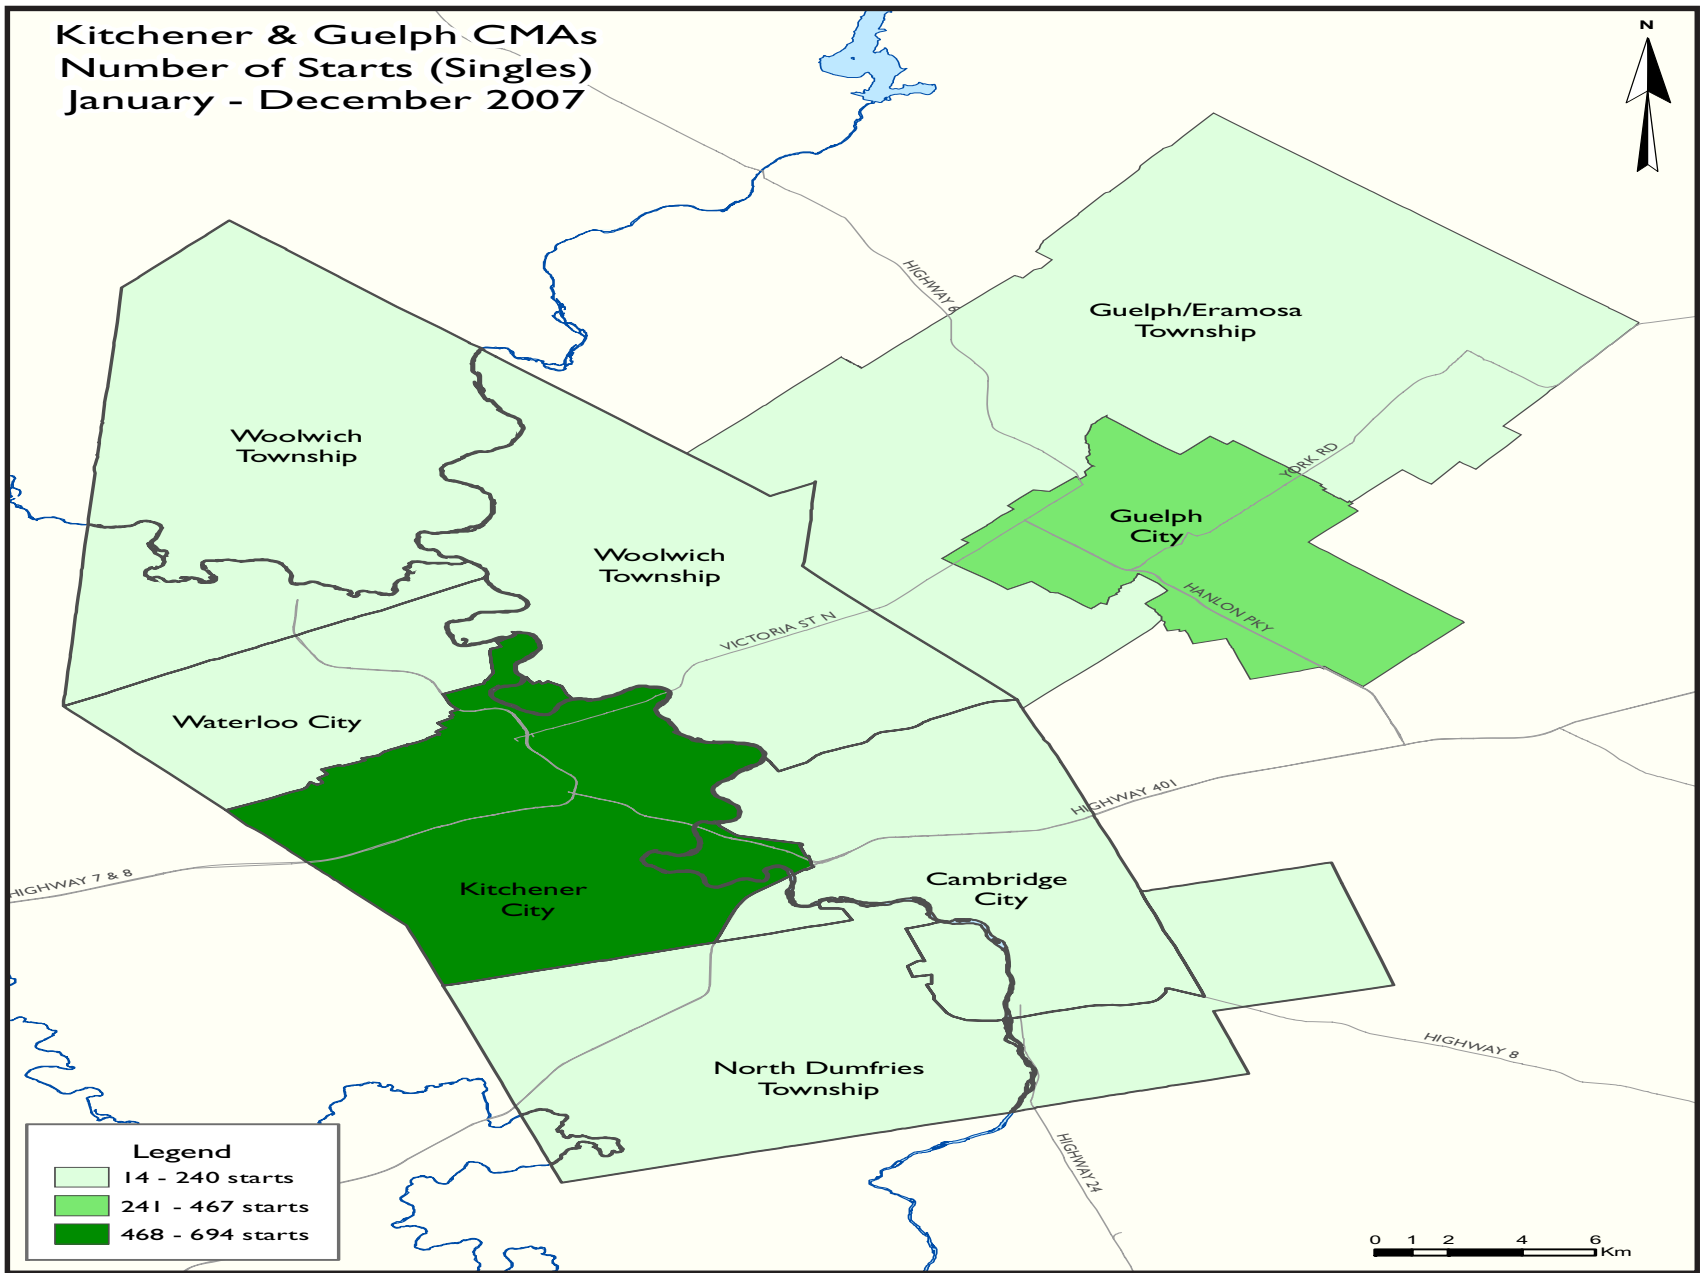

Employment in Kitchener remains at a high level despite significant job losses in the goods-producing sector. Employment in the services-producing sector has been steadily growing and has offset most of these losses. The employment rate, at 68 per cent in December, was the second highest among the major CMAs in Ontario. Overall employment was down just 0.4 per cent from the 2006 level. Part-time job gains partially offset the drop in full-time employment. In Guelph, employment was virtually unchanged, down just 0.3 per cent. Job losses in the goods-producing sector weighed heavily on total employment.

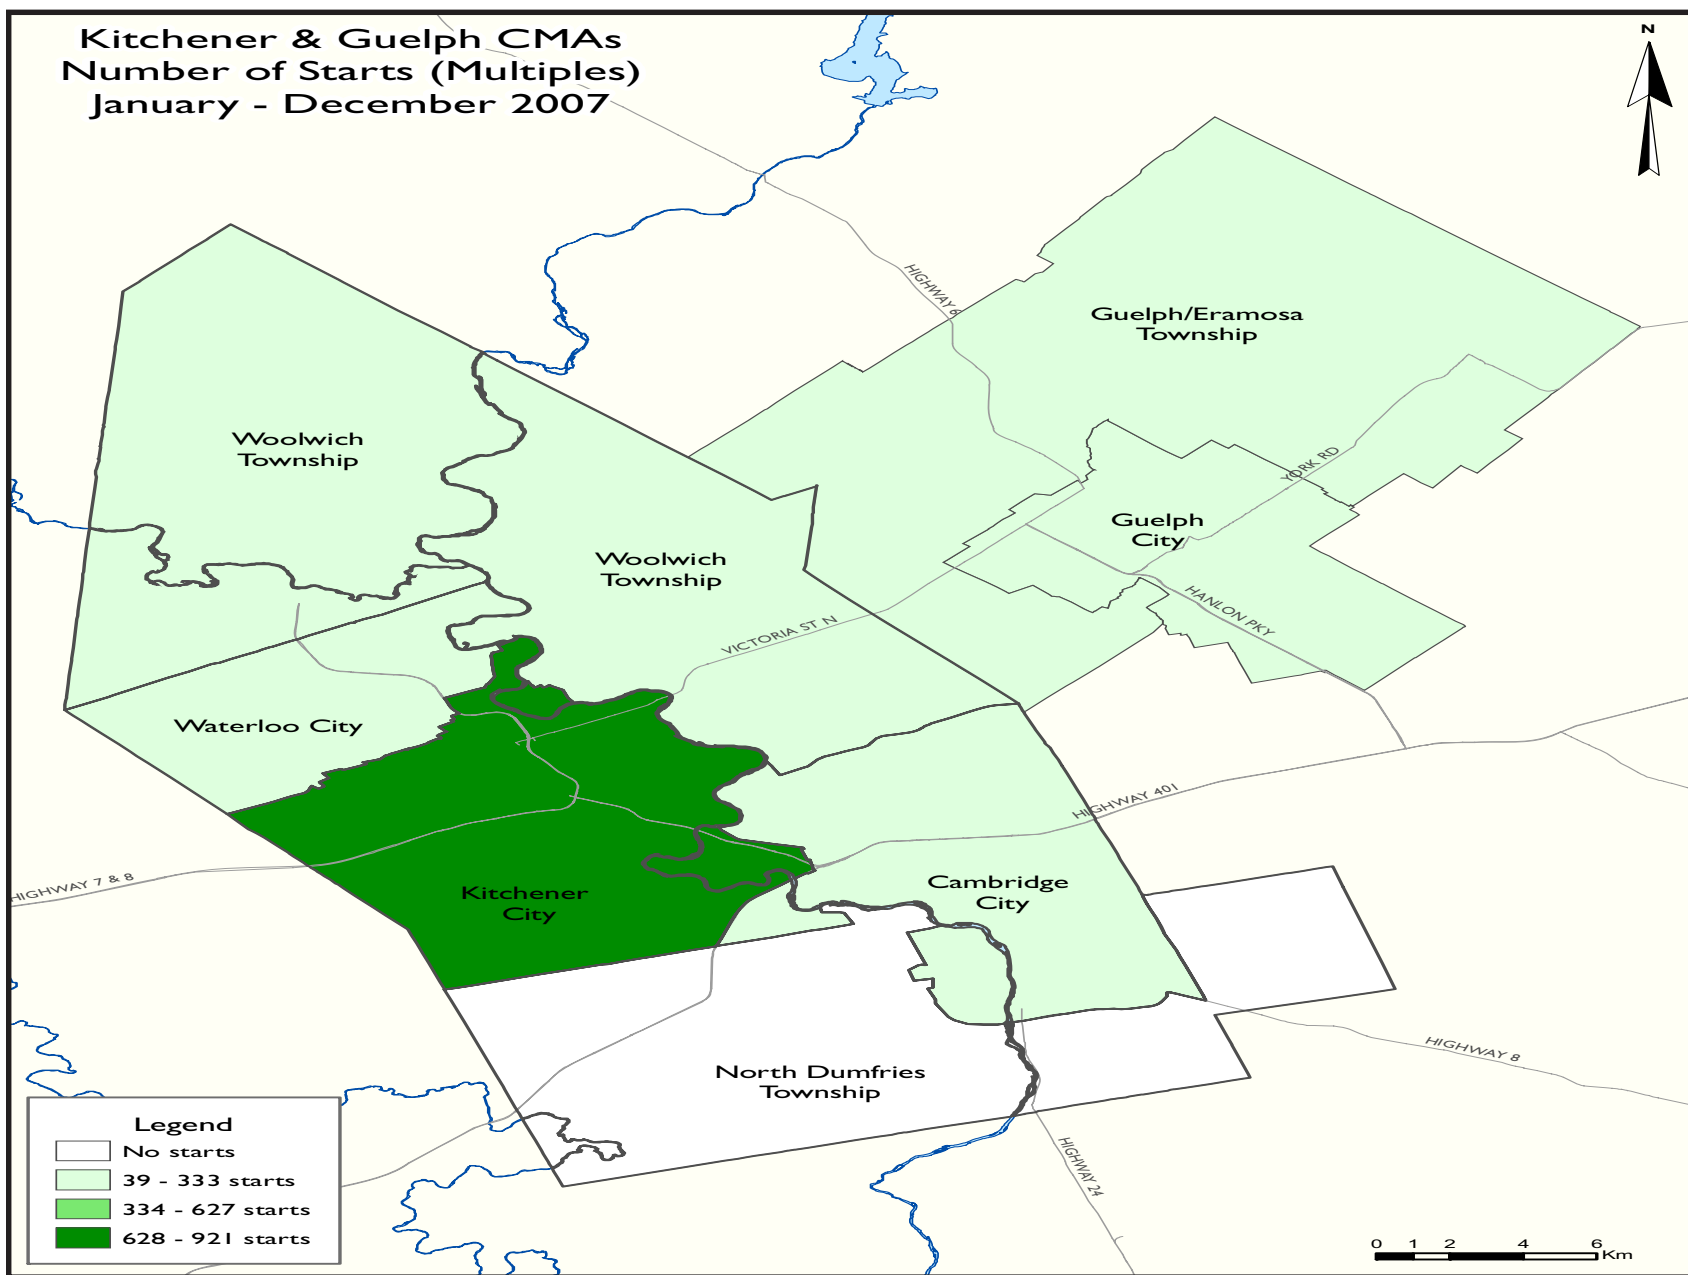

## HOUSING NOW REPORT TABLES

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A **“dwelling unit”**, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A **“start”**, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units **“under construction”** as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A **“completion”**, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term **“absorbed”** means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
