New Home Market

Soaring Condominium Apartment Construction

A record number of condominium apartments started construction in the first half of 2008, pushing total housing starts up 36.7 per cent to 21,939 compared to the first six months of 2007. Strong condominium apartment were the result of

record pre-construction condominium apartment sales in 2006 and 2007. While the new construction of condominium apartments was on a record pace in the first half of this year, low-rise home starts (single-detached, semi-detached and town houses) declined.

Two important factors resulted in increased demand for condominium apartments and, conversely, a shift away from low-rise home types: the

rising cost of homeownership and the changing demographic profile of households in the GTA.

Continued home price growth above the rate of inflation and more elevated borrowing costs over the past two years resulted in a rise in the required income to carry a mortgage on the average priced home in the GTA relative to average household income. First-time buyers were most affected by the rising cost of home ownership. Many first-time buyers have looked toward the purchase of comparatively less-expensive condominium apartments.

Demographics have also influenced the demand for condominium apartments. The GTA has been the single greatest beneficiary of immigration into Canada for many years. In fact, the Toronto Census Metropolitan Area has the highest proportion of foreign-born population compared to other major North American centres. While many newcomers to Canada initially rent, many of these households look towards home ownership in short order. Foreign-born home buyers have been an important component of the first-time buyer pool that has been pointed increasingly toward the condominium apartment market.

The influence of changing demographics on the condominium apartment market in the GTA has also been fuelled by the increasing number of people aged 65+. Some more aged households have decided to change their housing type, in many cases from a low-rise home to a condominium apartment. This trend is one of the factors that have given rise to the luxury condo-

minium apartment niche market in the Toronto area.

Existing Home Market

Existing Home Sales Down, But Strong

Following a record year in the Greater Toronto Area in 2007, existing home sales for the first half of 2008 are down 13.6 per cent. As buyers have experienced more choice in the resale market, price growth has moderated as well. Year-to-date the average existing home price has increased by 4.3 per cent compared to the same period in 2007.

A shrinking first-time buyer pool has been a key factor underlying the decline in existing home sales this year. Quality job growth for youth coupled with low mortgage rates and increased flexibility with mortgage

products arguably “pulled forward” some first-time buyers into 2007 that otherwise would have purchased in 2008 or 2009. According to CMHC’s *Renovation and Home Purchase Survey*, 40 per cent of households intending on purchasing a home in the Toronto CMA in 2008 would be first-time buyers, representing a decline from 2007, when 47 per cent of households who actually purchased a home were first-time buyers.

The rising cost of home ownership has been another factor contributing to the moderation in the demand for existing homes. According to CMHC’s Spring Housing Market Outlook, the forecast required income to carry a mortgage on the average priced resale home in 2008 will be only slightly less than the forecast household income for the GTA. As the gap between required income and household income has narrowed, some households have

Figure 2

decided to put their home buying decision on hold.

As existing home sales edged lower in the GTA, new listings continued to grow through June – up 3.2 per cent compared to 2007. Home owners looking to take advantage of continued annual price growth above the rate of inflation listed their homes to either trade up in the market or to take out some equity from their home and move into a different housing arrangement. In addition, new home completions have also trended higher this year in the GTA. Some of these new homes reaching completion were purchased by existing home owners. Many of these existing home owners will sell their current home to move into their newly completed dwelling.

Economic Overview

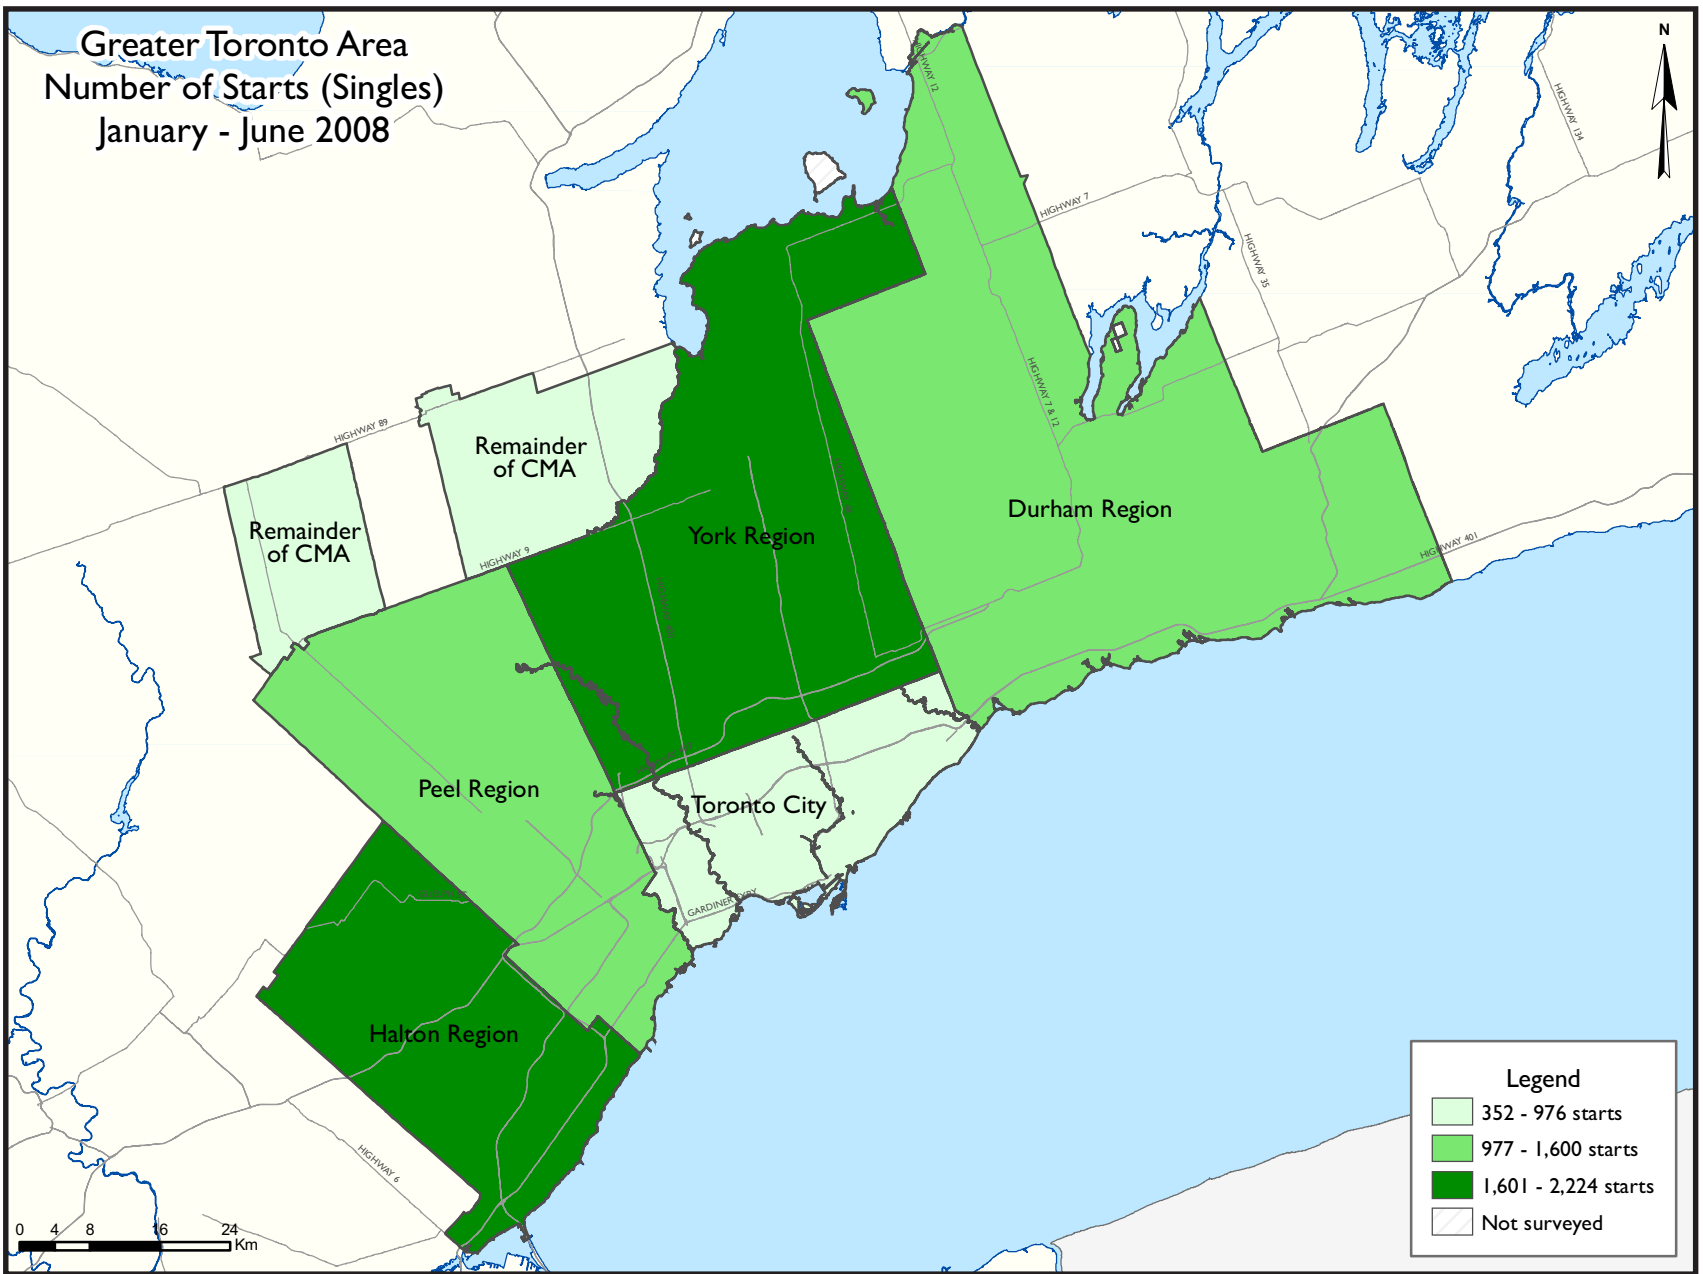

Job Growth Remained Positive

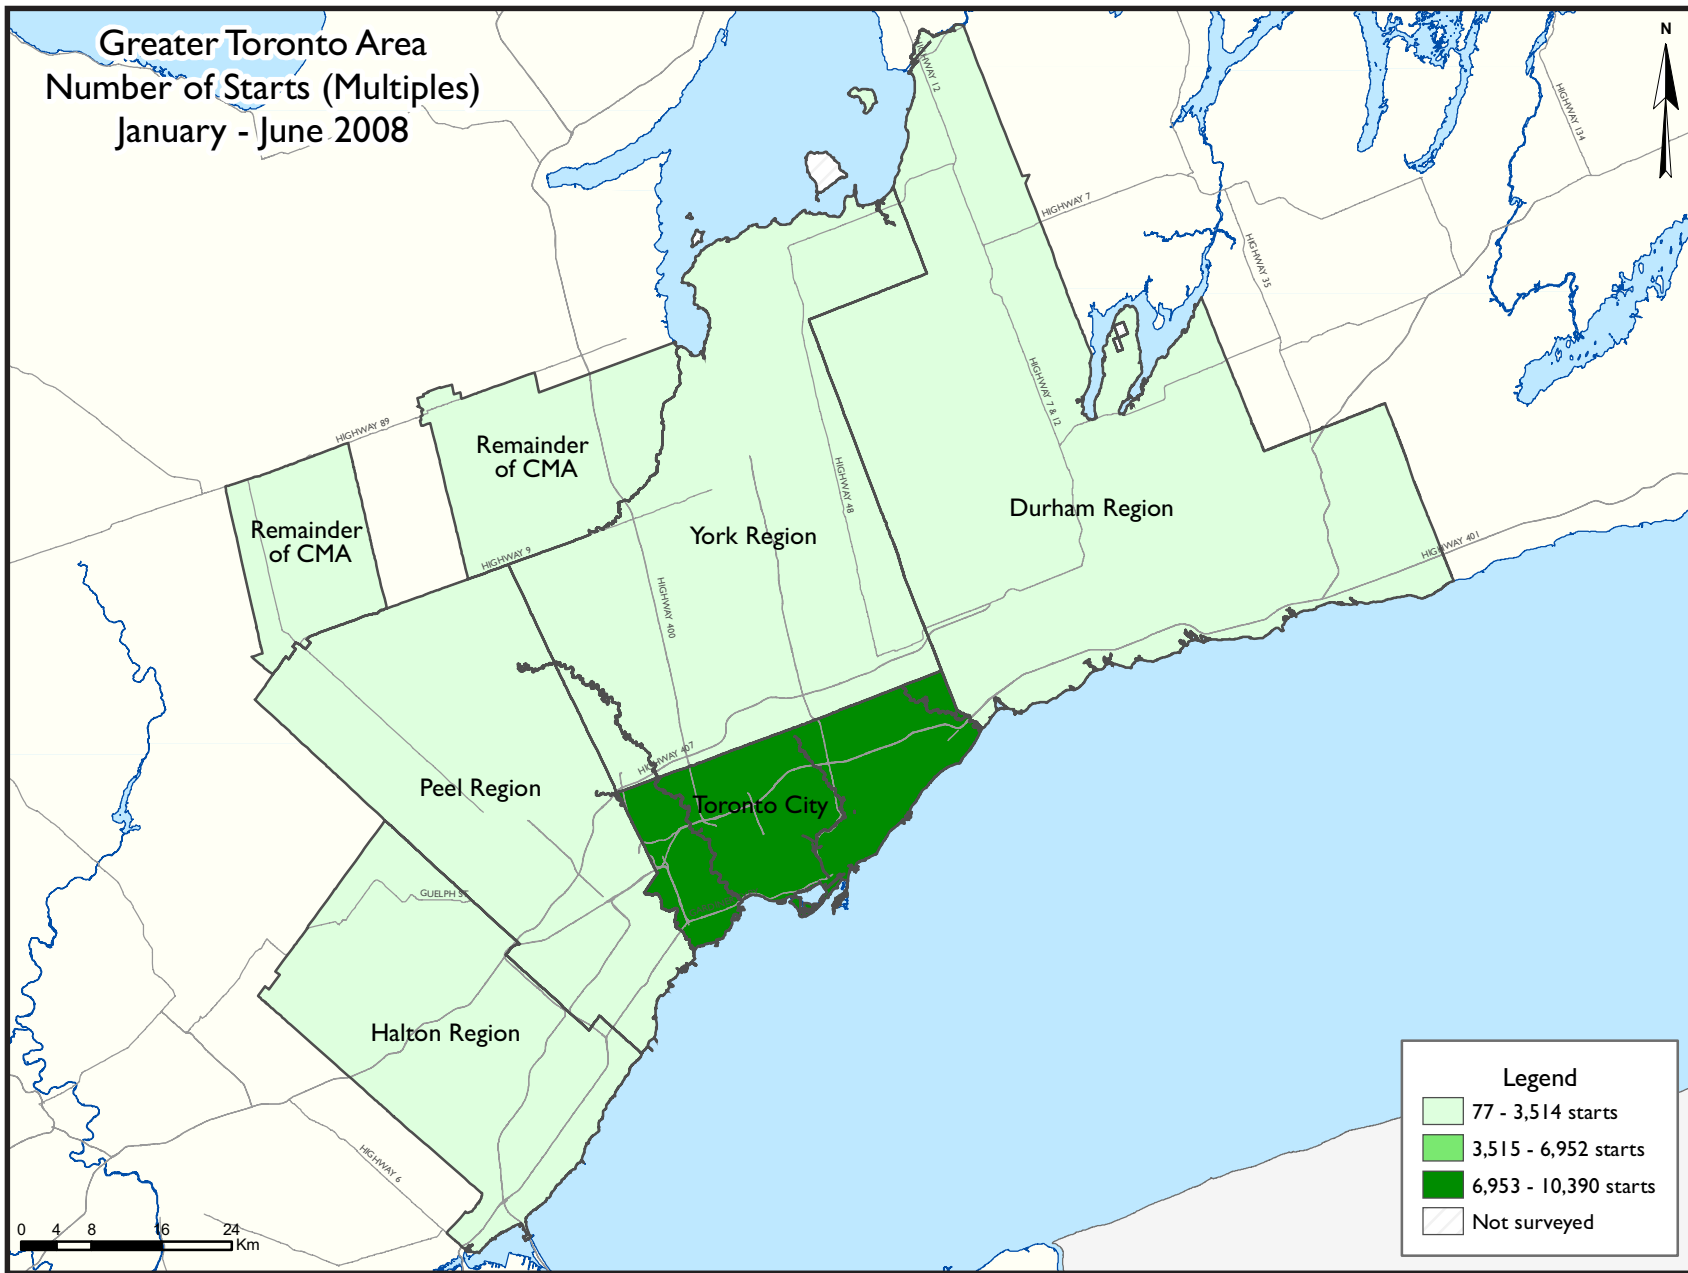

Similar to Ontario as a whole, the Greater Toronto Area shed manufacturing jobs during the first half of 2008. The high value of the Canadian dollar vis-à-vis the US dollar coupled with the broader economic slow down that unfolded in the United States resulted in less demand south of the border for manufactured products produced in Canada, including automobiles and related parts.

While the GTA experienced softness in the manufacturing sector, it is important to note that total employ-

ment actually increased strongly during the first two quarters of the year. Annual growth in employment hovered close to three per cent in the second quarter. Employment gains have been experienced in numerous sectors, including services, transportation, government and construction.

Jobs created in the GTA this year have been well-paying jobs. This is evidenced by the fact that average weekly earnings have been growing four to five per cent range through the first six months of the year. Strong growth in wages and salaries have been based on tight labour market conditions, with the unemployment rate trending below 2007 levels.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
