Date Released: Second Quarter 2008

New Home Market

Lowest First Quarter Starts Since 1985

New home construction in the Windsor Census Metropolitan Area (CMA) started the year on a low note. Total starts dropped 63 per cent to 39 units during the first quarter of 2007. This is the lowest number of starts recorded during the first

quarter since 1985. Foundations were laid for 29 single-detached homes and 10 multiple family homes.

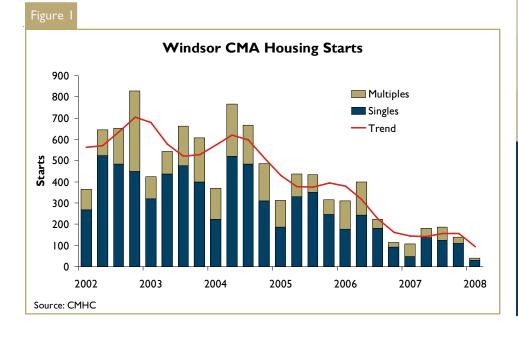

Consumer confidence is a key determinant of Windsor housing demand. The malaise in the automotive sector, high energy costs and the strong Canadian dollar contributed to the high unemployment rate which dampened the already low consumer confidence in the Windsor area. The low confidence in turn caused de-

mand for new homes to decline. In addition, with plenty of supply and lower prices, the resale market continued to draw purchasers away from the new home market.

Single-detached home starts moved lower in most of the municipalities in the Windsor CMA. The only exception was in Amherstburg, where single-detached home starts remained unchanged compared to the first quarter in 2007.

At \$289,800, the average price of new homes remained essentially flat compared to the \$290,400 recorded during the first quarter of 2007. LaSalle and Amherstburg, known as traditional locations for larger moveup family homes, had the largest increases. New homes in the Windsor CMA area continued to be nearly twice as expensive as the average resale home.

Homes with mid-range prices continued to be popular. The percentage share of sales of homes priced between \$200,000 and 299,999 rose while homes in other price categories declined. The share of homes priced between \$200,000 and \$249,999 in total sales rose from 28.6 per cent to 34.5 per cent, while the share of homes priced between 250,000 and 299,999 increased from 14.3 per cent to 17.2 per cent.

Resale Market

Demand for Resale Homes Continued to Drop in Windsor CMA

Sales of resale homes through Multiple Listing Services continued to decline in the first quarter of 2008. A total of 1,041 homes changed hands, down 4.8 per cent from the first quarter of 2007.

The persistent decline is mainly caused by the high unemployment rate. The continued job losses in the manufacturing sector and the malaise in the automotive sector contributed to Windsor's high employment rate, and that in turn impacted both local consumer confidence and the level of net migration negatively.

Although the number of new listings plateaued in 2006, homes listed for sale remained high. A total of 2,867 homes were listed, which is slightly lower than the 3,067 listings recorded during same quarter last year. With price growth low, homeowners are less inclined to list their homes to be able to buy a different home which more closely meets their current needs.

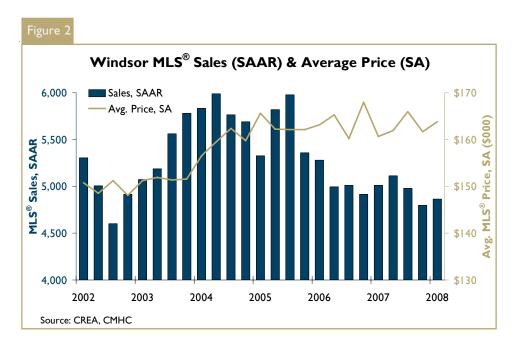

With higher listings and lower sales, the sales-to-new-listings ratio, a

measure of market state, continued to move lower in buyer's market territory. In a buyer's market, homes tend to take longer to sell and home prices tend to grow slower than the general rate of inflation.

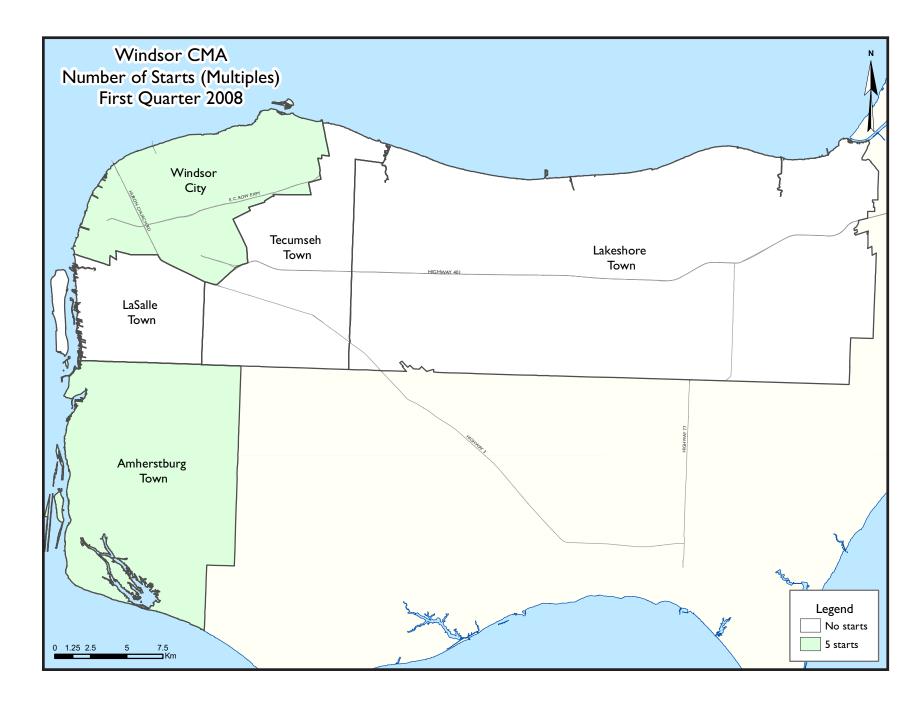

As Windsor's market moved towards the buyer's market, the average price of resale home came in at \$159,164 in the first quarter, up by 1.5 per cent, but lower than the general rate of inflation of 1.8 per cent. Windsor's price trend is a direct result of lower demand and buyers being in a stronger position during price negotiation.

Local Economy

Despite slightly higher employment during the first quarter of 2008, Windsor's unemployment rate remained above the provincial average. The challenges the automotive sector is facing were a factor in the unemployment situation.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "**Row (Townhouse)**" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
