

HOUSING NOW

Windsor CMA

Canada Mortgage and Housing Corporation

Date Released: Third Quarter 2008

New Home Market

Housing Starts Continue To Fall

New home construction in the Windsor Census Metropolitan Area (CMA) continued on a downward trend during the second quarter of 2008. Total starts dropped 14 per cent to 156 units. This is the lowest second quarter level of activity since 1984. Construction began on 111

single-detached homes, six semi-detached homes, 35 townhomes and four apartment units.

Reduced tourism due to ongoing border crossing issues and a strong Canadian dollar along with restructuring in the auto sector have contributed to reduced local consumer confidence in the Windsor-Essex area. Lower expectations for the future negatively affect demand, especially towards large ticket items

such as housing. While the unemployment rate in Windsor is lower than it was last year, this is due to the departure of workers from the labour force as opposed to job growth.

Single-detached home starts moved lower in Windsor City and the Town of Tecumseh and were unchanged or increased slightly in Amherstburg Township, Lakeshore Township and the Town of LaSalle.

The average price of a new home in the Windsor CMA surpassed the \$300,000 mark in the second quarter of 2008, hitting \$316,410, a gain of 10.7 per cent over second quarter 2007 figures. LaSalle, which offers a greater selection of lots, had the highest average price at just under \$400,000. The gap between the average price of a new single-detached home in the Windsor CMA and the average resale home price continues to widen.

Mid-priced and custom homes continued to be the most popular sellers in the second quarter. More than half of the homes completed and sold were priced between \$200,000 and \$299,999. Homes worth \$350,000 or more accounted for 30 per cent of activity, up from 21 per cent in the second quarter of 2007.

Resale Market

Existing Home Sales Down Again

Sales of existing homes through the Multiple Listing Services® continued to decline in the second quarter of 2008 in the Windsor-Essex Real Estate

Board territory. A total of 1,421 homes were sold, down 8.5 per cent from the second quarter of 2007.

The reduced demand for resale homes may be attributed to a weak local economy and the low number of people moving to the area. The struggling manufacturing sector has discouraged many households from purchasing a new home or moving-up to a larger resale home. Some households have responded to the economic uncertainty by listing their homes for sale and as such the number of new listings has reached a historical high of 3,449, up 0.5 per cent from second quarter 2007 figures.

With higher listings and lower sales, the sales-to-new-listings ratio, a measure of market state, continued to move lower in buyer's market territory. In a buyer's market, homes tend to take longer to sell and home prices tend to grow more slowly than the general rate of inflation.

The increased choice of homes available for sale favoured buyers in price negotiations. The average price during the second quarter dropped 2.4 per cent to \$161,312 from second quarter 2007 figures. On a year-to-date basis the average price is less than one per cent below last year's figures.

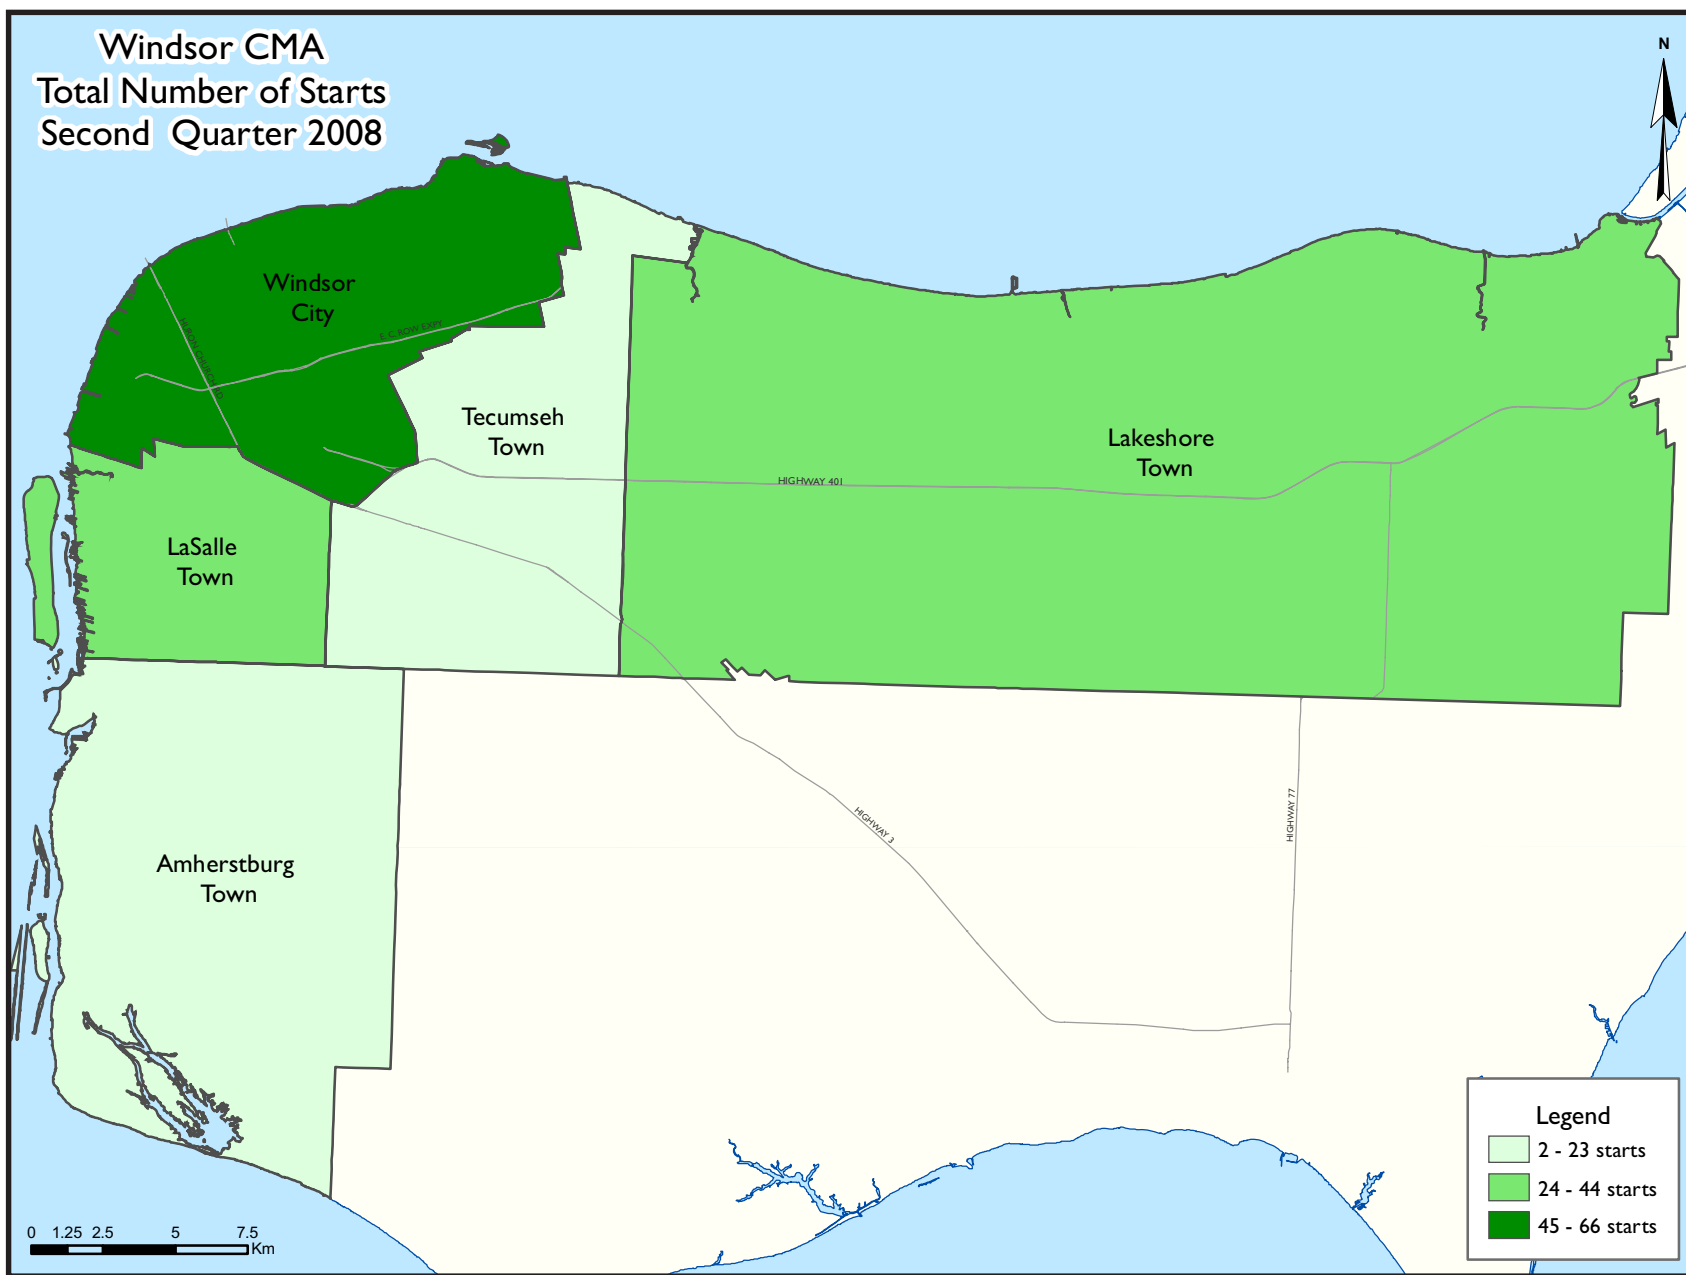

Local Economy

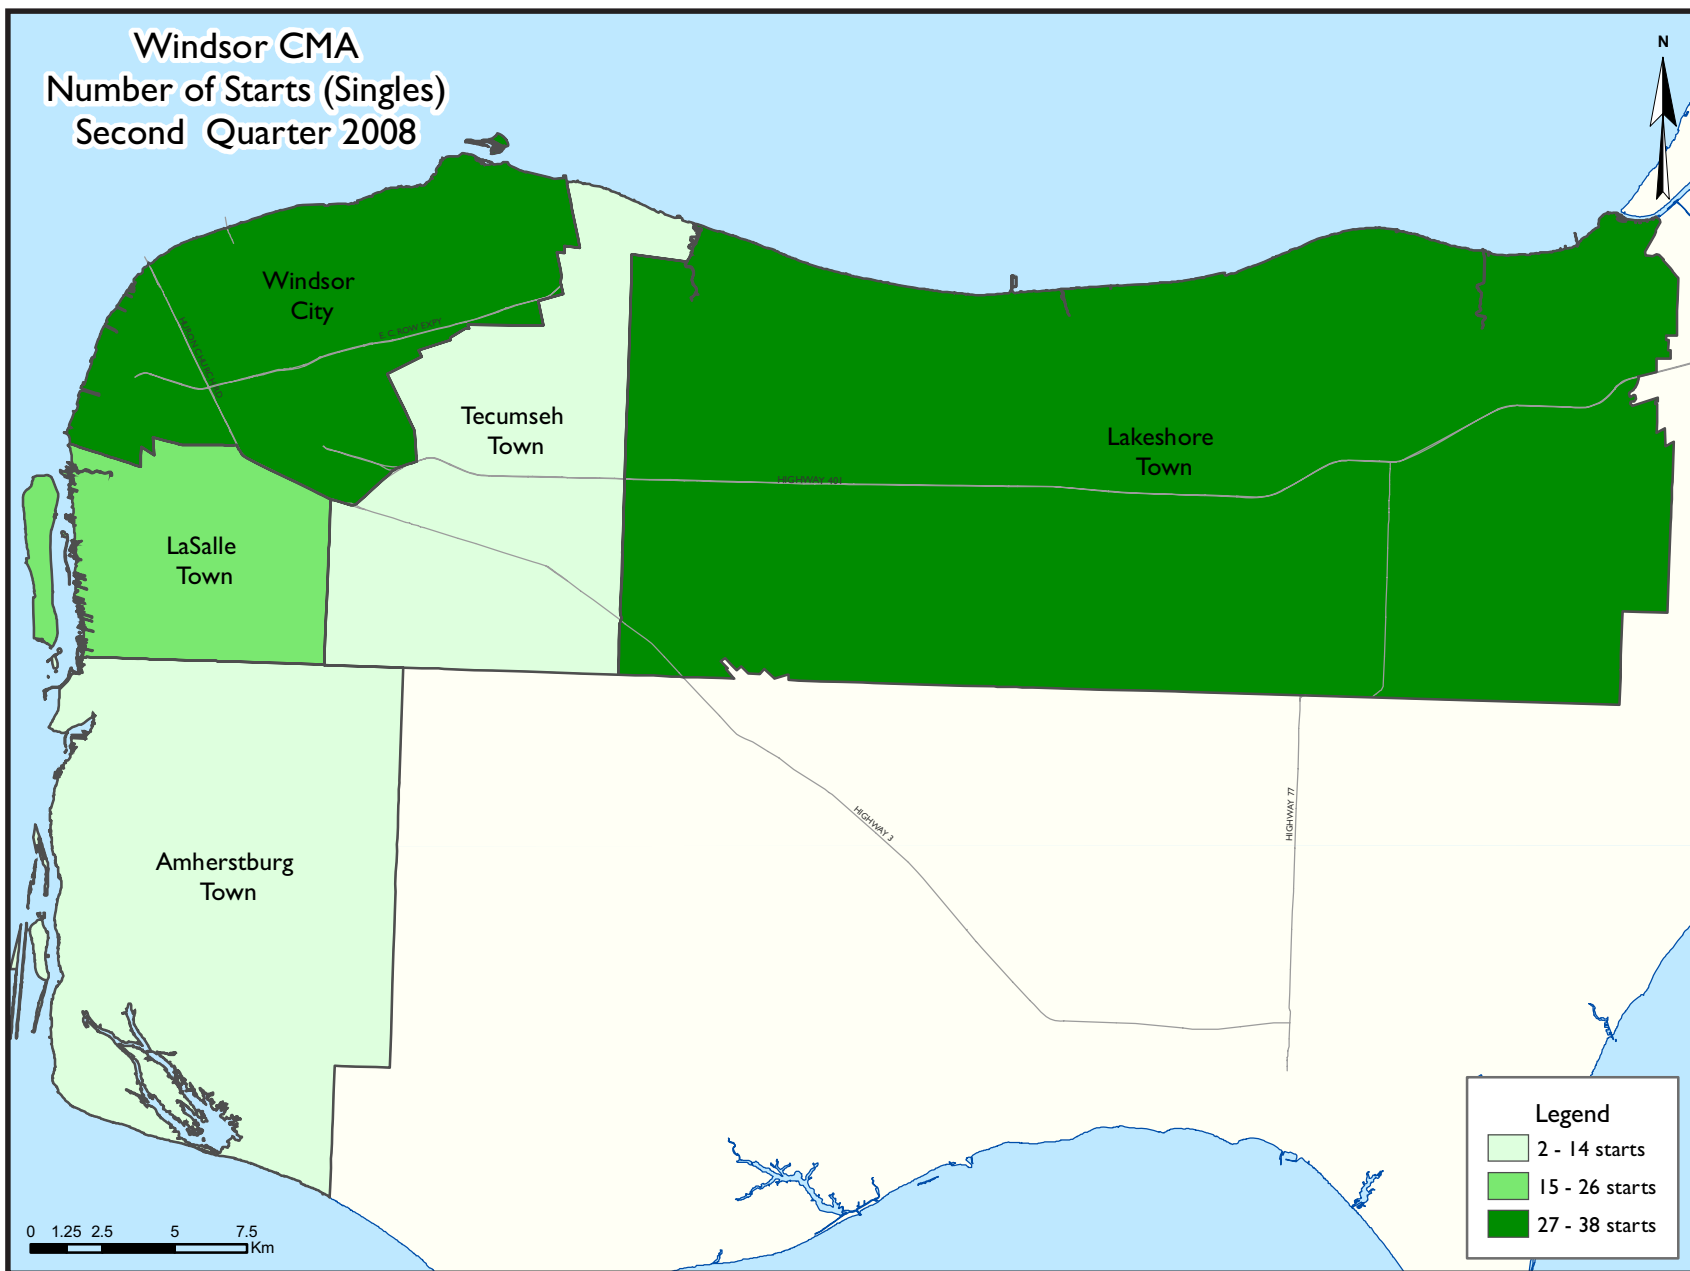

Windsor Work Force Shrinking

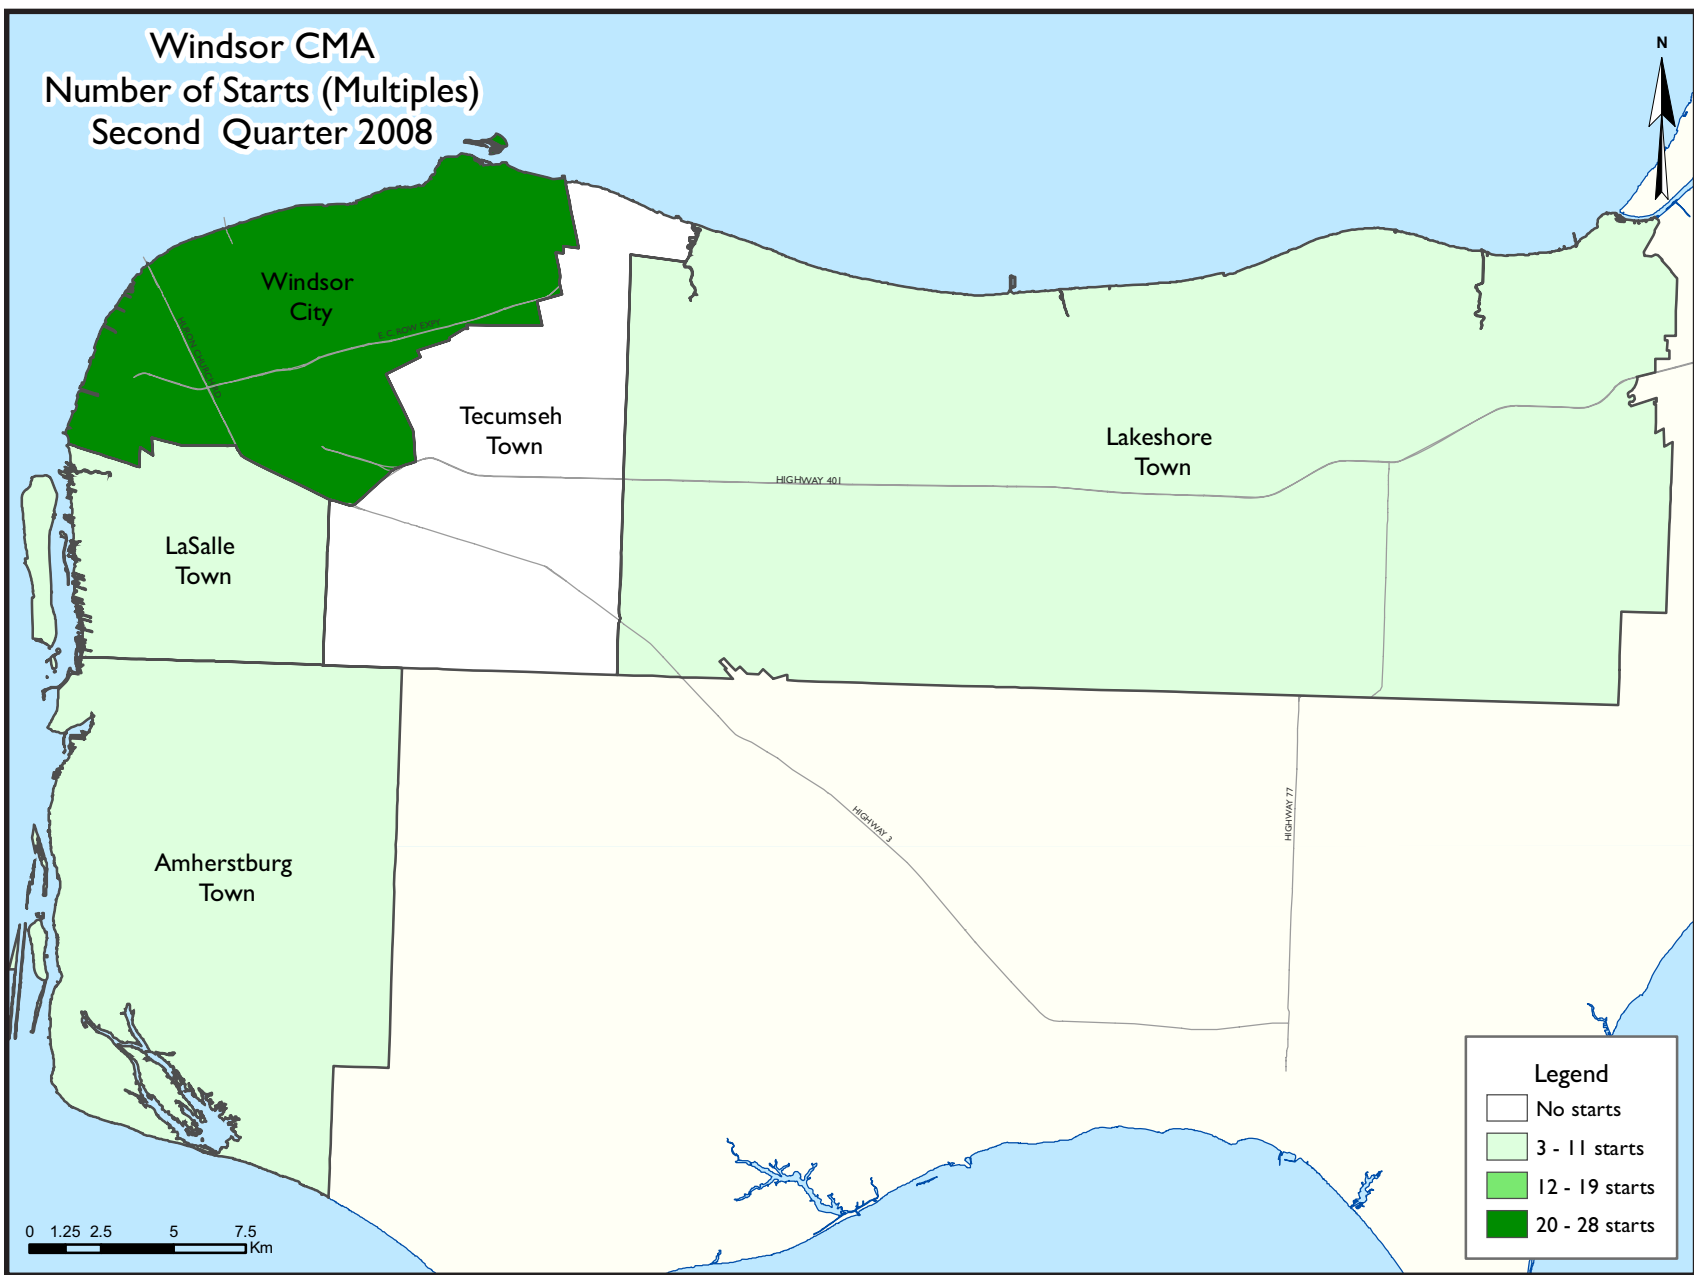

While the unemployment rate in the Windsor CMA has dropped from last year, the number of persons employed has not grown. In fact, the labour force has decreased by 1.5 per cent between June 2007 and June 2008. Out-migration and discouraged workers leaving the work force have been the major factor in the drop in the unemployment rate, not job growth.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
