## HOUSING STARTS IN THE MONTREAL AREA REBOUND IN JULY

According to the latest starts survey conducted by Canada Mortgage and Housing Corporation (CMHC), there were 1,737 housing starts in the Montréal census metropolitan area (CMA) in July, up 10 per cent over the 1,579 starts in July 2007. Residential construction has therefore rebounded, since housing starts in June had dropped 20 per cent compared to June 2007.

For the second consecutive month, starts in the freehold home segment declined. In July, 753 such units were started, for a 3-per-cent drop year-over-year. This pullback was not due to a decline in single-detached housing starts, as starts for this housing type (626) were virtually identical to figures for July 2007 (629). The 15-per-cent decline in semi-detached and row housing is responsible for the decreased activity in the freehold home segment. Although a decline in semi-detached and row starts was noted for a

second month in a row, this type of housing is still popular because it is affordable. In 2008, we predict that semi-detached and row housing starts will outpace the numbers for 2007. Moreover, since the beginning of the year, starts for this housing are up 26 per cent over the same period in 2007.

As was the case in June, rental housing starts dipped in July. The start of construction on three major projects could not head off the 8-per-cent decline in starts (443 versus 482) from July 2007.

Condominiums are the only segment to have registered a gain last month. A total of 541 units were started, up 70 per cent over July 2007 (318). More than half the starts were on the Island of Montréal. This large sector is where the number of condominium starts posted the strongest growth (+143 per cent).

In terms of market performance by the various geographical areas, starts on the Island of Montréal

skyrocketed by 123 per cent. The 3-per-cent decline in freehold home starts was offset by the elevenfold increase in rental units started and the 143-per-cent boost in condominium starts.

Laval recorded the sharpest drop in housing starts (-63 per cent). The start of a 33-unit condominium project drove up activity in this market segment by 18 per cent. However, contrary to July 2007, no major projects were started in the rental segment, where activity was off a whopping 97 per cent. Activity in the freehold segment dipped as well (-6 per cent).

Starts in municipalities on the North Shore rose 37 per cent due to the fourfold increase in the number of rental units started. Condominium and freehold home starts remained pretty much stable compared to July 2007. In Saint-Jérôme, the number of starts more than tripled over July 2007, but it must be pointed out that activity in July of last year was rather anemic, as only 18 single-detached homes had been started.

In Longueuil, housing starts were down 16 per cent. No starts were posted in the rental housing segment last month, and freehold starts tumbled 29 per cent. However, foundations were laid for several small condominium projects, driving up activity in the condominium segment where the starts figures were eleven times those recorded in July 2007.

In other municipalities on the South Shore, the 29-per-cent spike in rental housing starts contributed to the rise in residential construction (+7 per cent). Freehold home starts remained stable, while condominium starts dropped by 11 per cent.

Finally, starts declined 4 per cent in Vaudreuil-Soulanges last month. Had it not been for the 88-per-cent rise in condominium starts, overall activity would have dropped even more, as freehold starts sagged by 12 per cent and there were no rental housing starts, as was the case last July.

## The 2008 Housing Outlook Conferences

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
