Date Released: Second Quarter 2008

Residential Construction Increases in the First Quarter

The rise in residential construction continued in the first quarter of 2008 in the Québec census metropolitan area (CMA). The survey conducted by Canada Mortgage and Housing Corporation (CMHC) revealed that 869 new dwellings were started from January to March, or 22 per cent more than

during the same period in 2007. This was the fourth consecutive quarterly increase for the Québec area.

This new rise in starts was largely attributable to the rental housing segment, particularly the retirement home niche. In fact, during the first three months of the year, foundations were laid for 340 rental apartments, including 284 retirement housing units. At the same time last year, only 92 rental

apartments had been started. Retirement housing construction should slow down by the end of the year, however, as the start-up of several hundred units in recent months could lead to surpluses in certain sectors.

Condominium starts, for their part, registered a more modest increase, with 159 new units in the first three months of the year, compared to 147 during the same period last year. Lastly, foundations were laid for 370 freehold homes¹, down from 475 new units of this type a year earlier.

In all urban centres with 10,000 or more inhabitants across Quebec, 8,081 starts were enumerated in the first quarter of 2008, for a gain of 14 per cent over the same period in 2007. Increases in residential construction were registered in Gatineau (+43 per cent), Saguenay

(+35 per cent), Montréal (+26 per cent) and Québec (+22 per cent). Conversely, decreases were recorded in the CMAs of Sherbrooke (-14 per cent) and Trois-Rivières (-7 per cent).

Sales slow down in the first quarter

The resale market showed signs of running out of steam at the beginning of 2008 on the territory of the Québec census metropolitan area (CMA). After a very active year for sales in 2007, the pace slowed down. In fact, according to Service inter-agences / Multiple Listing Service (S.I.A. / MLS)[®] data, 1,994 transactions² were registered from January to March 2008, down by 12 per cent from the corresponding period a year earlier. The decrease in transactions during the first quarter

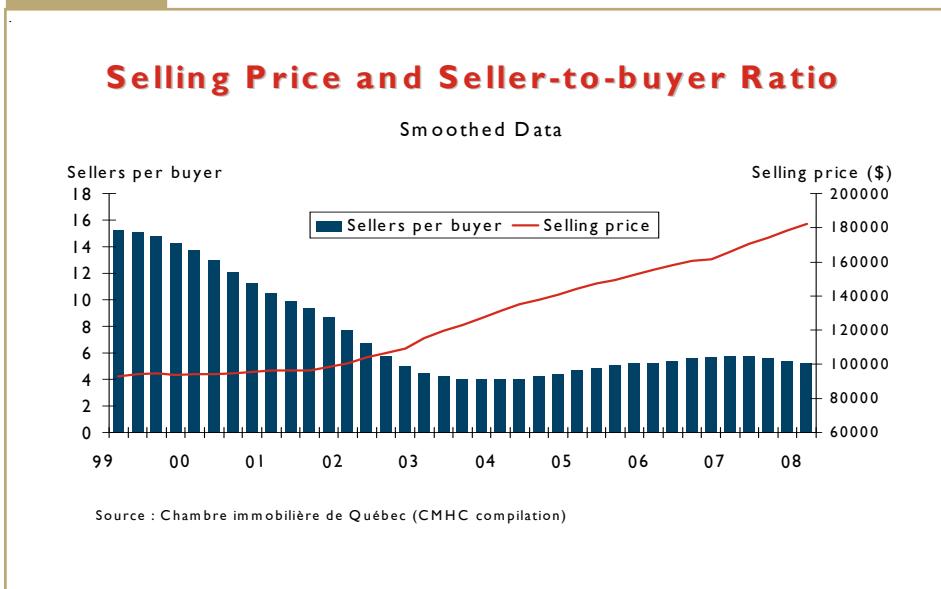

extended to almost all market segments: single-detached houses (-18 per cent), semi-detached and row homes (-4 per cent) and condominiums (-4 per cent). Only duplex sales rose (+5 per cent).

This slowdown was partly due to the heavy snowfalls this past winter that surely curbed the enthusiasm of many buyers. With the imminent arrival of milder weather, sales of existing properties should pick up. The economic environment is still good, particularly on account of the strong job market, but also because of the financing conditions, which will remain favourable all year long. Just like in recent years, the resale market will therefore remain dynamic in 2008.

At the same time as sales fell, listings also decreased. At the end of the first quarter, 3,033 properties had “For Sale” signs, or 438 fewer than at the same time in 2007. This decline in supply drove down the seller-to-buyer ratio, from 5.8 to 1 in the first quarter of 2007 to 5.2 to 1 for the first three months of 2008. With the market still favouring sellers, the price increases were steady. In the first quarter of 2008, the average price of properties was \$182,385 in the Québec CMA, up by 10 per cent over the corresponding period a year earlier.

The condominium segment was the market that tightened the most year-over-year. Given the strong increase in transactions in 2007, combined with the decrease in properties for sale, the seller-to-buyer ratio has

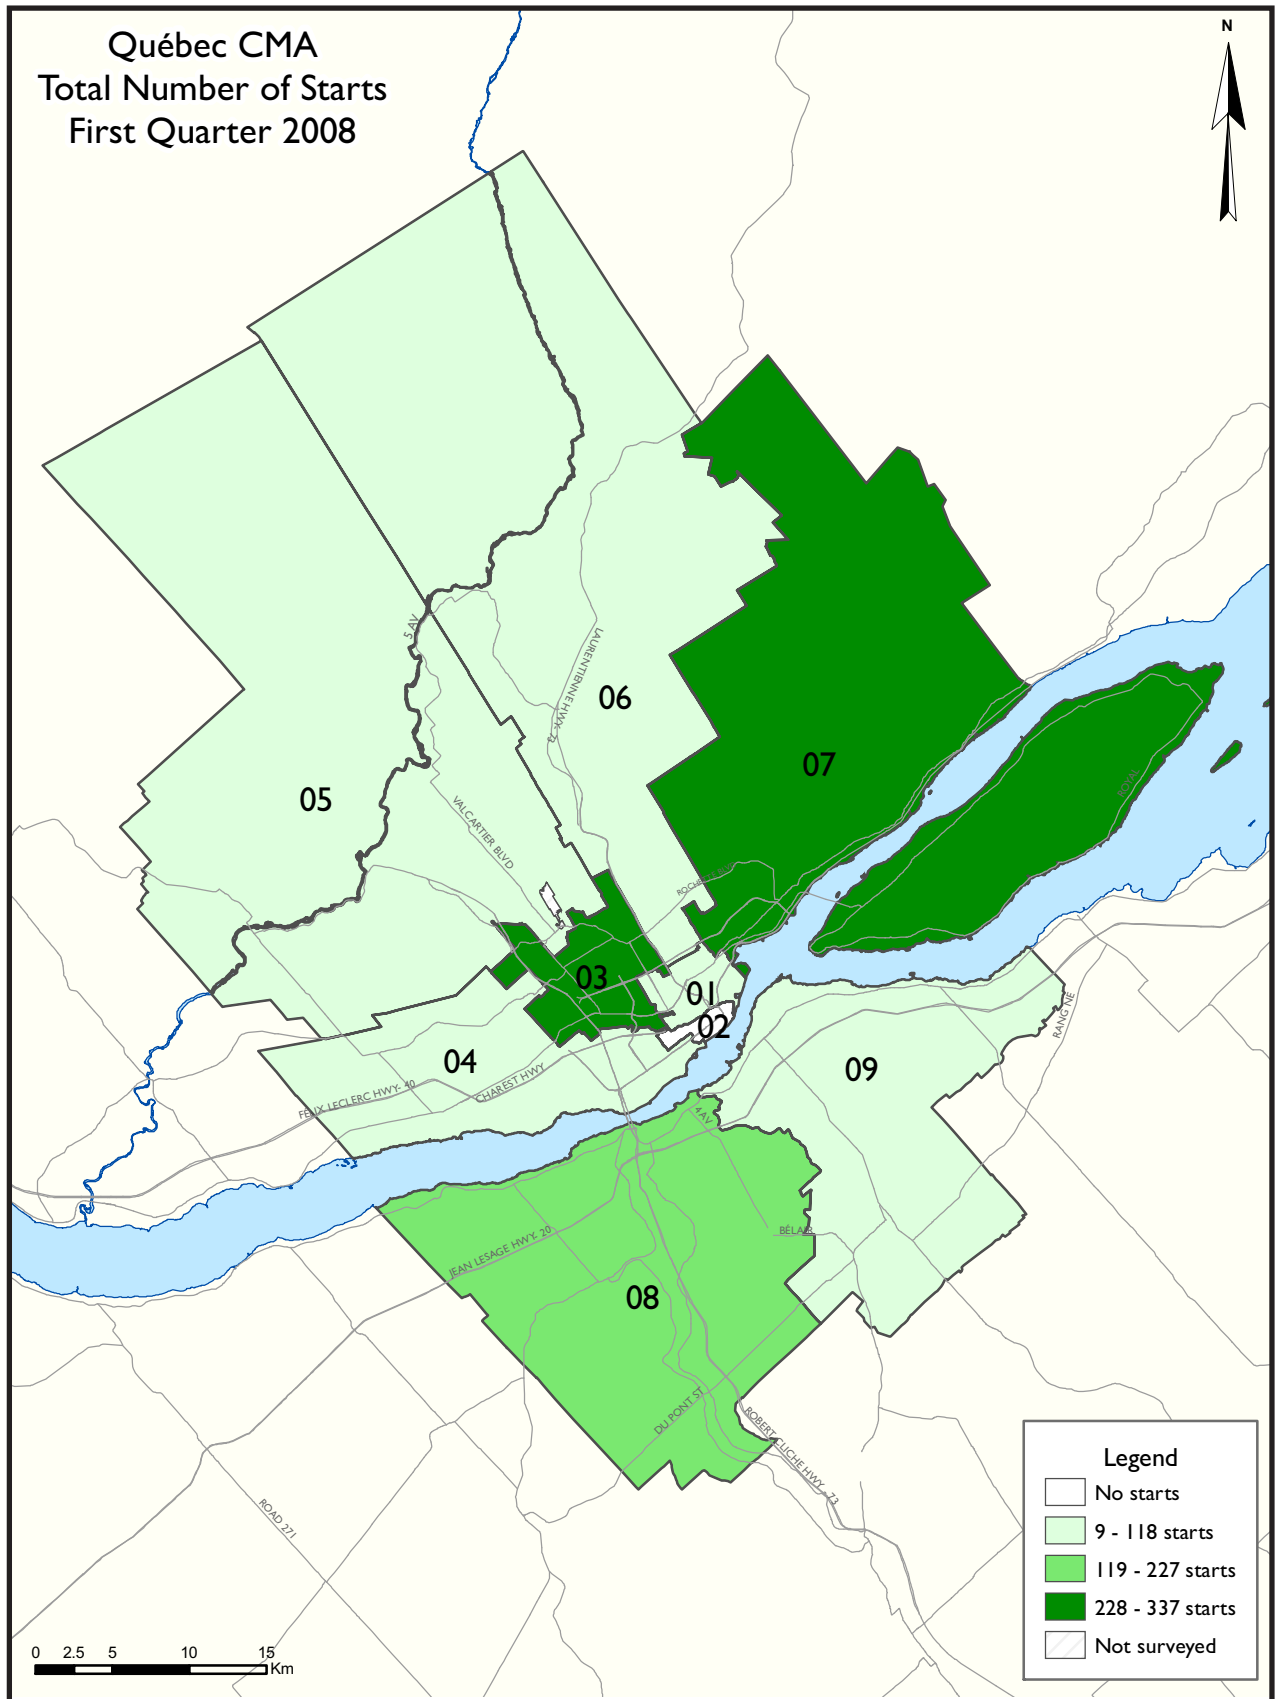

Figure 2

¹ Freehold homes include detached, semi-detached and row houses, as well as duplexes.

² It should be noted that, following changes to the database of the Chambre immobilière de Québec, CMHC has revised previous data. There may consequently be differences between the data contained in this publication and the figures published in the past.

now reached 7.1 to 1, down from 8.1 to 1 at the same time last year. For one thing, the affordability of condominiums works in their favour among first-time home buyers. In the first quarter of 2008, condominiums were selling for an average of \$154,780, or nearly \$44,000 less than the average price of single-detached houses (\$198,535). Also, the aging of the population is fuelling demand for condominiums, which are an interesting alternative in the eyes of senior clients, for whom the burden of maintaining a single-family property is starting to become increasingly heavy.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
