

RENTAL MARKET REPORT

Ontario Highlights

Canada Mortgage and Housing Corporation

Date Released: Spring 2008

Figure 1

Figure 2

Highlights

- Ontario rental apartment vacancy rates decline to 3.1 per cent in April 2008
- Vacancy rates decline for all bedroom types
- Most urban centres posted tighter rental market conditions
- Greater Sudbury is one of the tightest markets across the country
- Windsor, Hamilton, Oshawa, St. Catharines-Niagara and Thunder Bay post vacancy rates above Ontario average
- Increases in fixed sample apartment rents were in line with rent review guideline increases and increases in the cost of living index
- Notable factors adding to rental demand include: rising homeownership costs, strong youth labour market and low completions of apartments targeted for ownership.

Ontario Vacancy Rates Decline in April 2008

Ontario rental apartment vacancy rates moved lower in April of 2008. Ontario vacancy rates dropped to 3.1 per cent this year from 3.9 per cent in the same month last year. Apartment vacancy rates declined across all bedroom types. Despite recent declines in Ontario vacancy rates, provincial vacancy rates still remain elevated, particularly when compared to booming western Canadian rental markets

Approximately three quarters of all major Ontario urban centres registered vacancy rates below levels witnessed last year. Greater Sudbury continues to be home to one of the tightest rental apartment markets in Canada. Greater Sudbury's rental markets are benefiting from a boom in mining activity driven by rising commodity prices which in turn is boosting employment growth and immigration. Still, one third of major Ontario markets registered vacancy rates above Ontario averages. Notable examples include Windsor, Oshawa, Hamilton, St. Catharines Niagara and Thunder Bay. Vacancy rates remained above provincial averages in these goods-producing centres largely due to local economy

ties to a slowing US economy. Slower US growth along with a high Canadian dollar dampened local business and housing market conditions in these centres. Ontario's largest and most expensive housing markets, Toronto and Ottawa, saw vacancy rates move below Ontario averages.

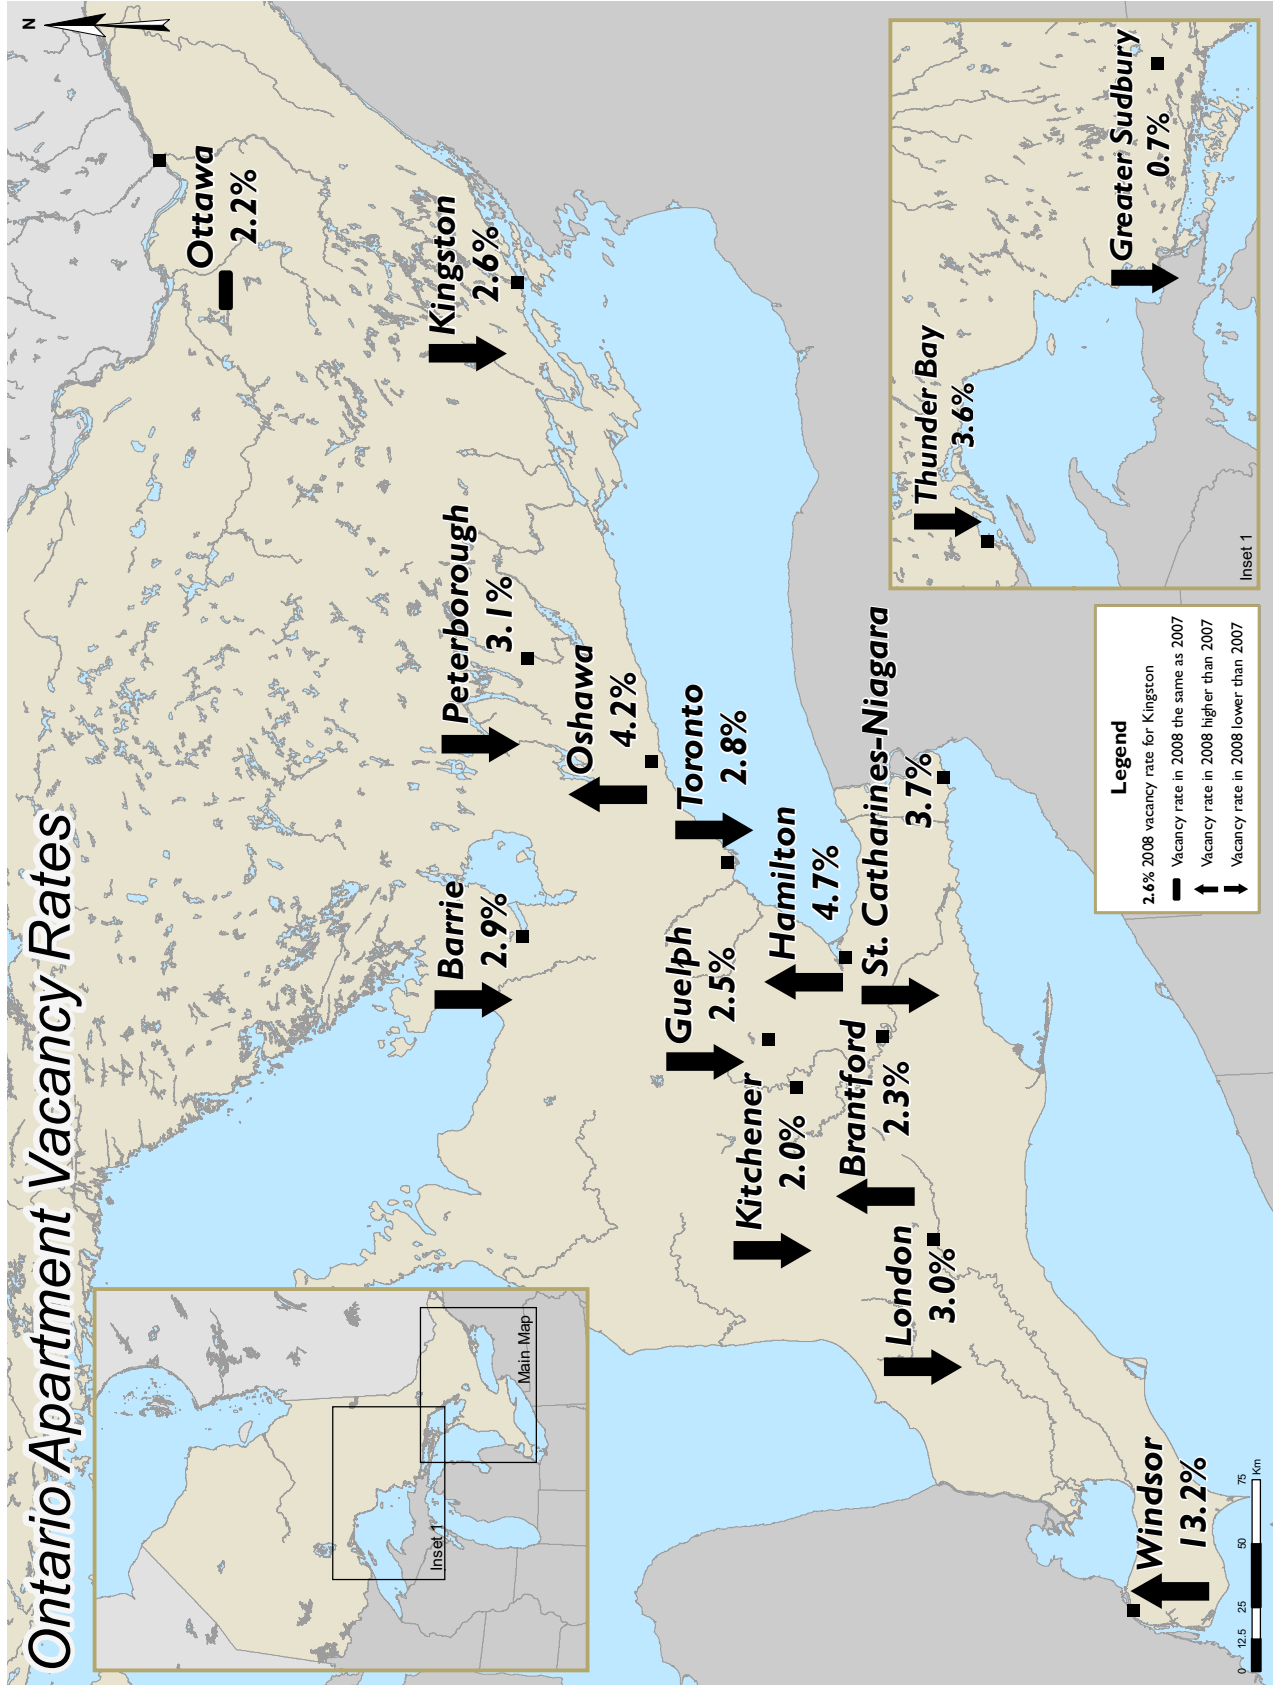

Elevated Ontario vacancy rates kept the growth in average 2-bedroom apartment fixed sample rents in line with rent guideline increases and the cost of living index in 2008. When adjusted for inflation however, overall Ontario rent levels have been edging lower.

A number of factors have increased rental demand and put downward pressure on vacancy rates. Firstly, homeownership affordability has started to erode, especially when compared to the cost of renting. While first time buyers were very active in the homeownership market early in 2007, rising mortgage carrying costs have dampened home buying activity since the fourth quarter of 2007. Required income to buy a home has been growing faster than actual incomes across the province. Rising homeownership costs coincided with sluggish Ontario consumer sentiment due to economic uncertainty in the US. In fact,

recent surveys indicate that home buying intentions among first time buyers is down, tempering the outflow of Ontario renter households into the ownership market.

Secondly, younger Ontarians under the age of 24 typically have fewer financial resources and therefore are more likely to opt for rental accommodation during their early adult years. This is especially true if they are successful in landing a job in the lower-paying service sector. Young adults are more likely to have been employed in the service sector, a sector enjoying healthy job gains recently. While some young adults may have opted to stay home longer, some have left the parental home and increased demand for rental accommodation.

Thirdly, while some apartments have reached the completion stage in recent months, fewer completed apartment ownership units in recent years boosted conventional rental demand further. Condominium apartments are a cost effective way for first time buyers to enter the homeownership market. Fewer apartment completions meant fewer renter households were vacating their rental units to take occupancy of their new apartment ownership units.

¹ The Estimate of Percentage Change is a measure of the market movement, and is based on those structures that were common to the survey for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

n/u: No units exist in universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

Please click [Methodology](#) or [Data Reliability Tables Appendix links](#) for more details

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The data collected for a structure depends on whether it is an apartment or a row structure. The survey collects market rent, available and vacant unit data for all sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the April 2007 and April 2008 Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
