# Service Bulletin Monthly Railway Carloadings

February 2008

# **Highlights**

## February 2008

- The Canadian railway industry loaded about 21.5 million metric tonnes in February, a 5.1% decline from January's level. The decline in loadings is typical for the month of February as it is a shorter month.
- On a year-over-year basis, however, February's loadings are higher than the 20.1 million metric tonnes loaded by the industry in 2007 when it was affected by a 15-day rail strike. It is also higher than the 21.2 million metric tonnes loaded in 2006.
- While the extra day brought on by having a leap month has an impact on the increased year-over-year loadings, the industry was not without its own challenges during the month. In particular, the industry faced a number of derailments and the continued effects of a harsh winter.
- Non-intermodal loadings, which comprise the majority of the loadings for the industry, decreased 5.1% to 19.3 million metric tonnes. The decrease in loadings was widespread, with declines in 49 of the 64 commodity classifications.
- Despite this drop, manufactured products continued its strong growth, with double digit increases in three of its core commodity classifications. These include freight motor vehicles (+40.4%), automobiles and mini-vans (+22.4%) and parts and accessories for motor vehicles (+13.6%).
- The rise in automotive loadings may be the result of dealerships stocking their lots with new vehicles in anticipation
  of demand from price reductions and incentives offered by manufacturers.
- A similar picture can be painted on the intermodal loadings side of things, as loadings decreased 5.7% to 2.2 million metric tonnes in February.
- The decrease was primarily the result of a drop in containerized cargo shipments, which fell 5.8% to 2.1 million metric tonnes.
- Rail freight traffic coming from the United States also fell for the month, declining 2.3% to 2.7 million metric tonnes.
- On a year-over-year basis, commodity loadings transported within and into Canada rose in February. Traffic
  received from the United States led the charge, climbing 20.6% from February 2007, while non-intermodal and
  intermodal loadings rose 7.2% and 6.5%, respectively.
- The annual increase in tonnage from US inbound traffic is attributable to a 22.5% rise in the number of carloadings.

# Methodology and concepts

The **Railway Carloadings (Monthly)** publication presents essential data for timely analysis of the Rail Transport Industry and its contribution to the Canadian economy. Approximately 40 rail carriers report each month on their total intermodal and non-intermodal traffic. For non-intermodal traffic, the carriers report the number of cars and tonnes by commodity of revenue-generating freight that they have loaded in Canada. For intermodal freight, the carriers report the number of units and tonnes for containers-on-flat-cars (C.O.F.C.) and trailers-on-flat-cars (T.O.F.C.), with no commodity detail. The carriers also report the total tonnage of revenue freight received from United States connections.

The total quantity of freight carried in Canada is the sum of the non-intermodal and intermodal freight loaded and the traffic received from U.S. connections. Additional information provided includes the number of units and tonnes of C.O.F.C. and T.O.F.C received from U.S. connections and the total tonnes of cargo that the carriers received from other Canadian connections. This freight that is exchanged among Canadian based carriers is counted only once in the total quantity of freight moved as it is counted only when loaded. For intermodal freight, twenty-foot equivalent units (TEUs) are derived from the dimensions of the freight-laden containers. Empty containers are not included in these statistics.

The data are collected via questionnaires and electronic reports that are filed with Statistics Canada eight working days after the reference month. These questionnaires are captured and edited and the data are then aggregated to produce tables for all of Canada and the Eastern and Western divisions of Canada. Tables show the data for the reference month and the year-to-date. These year-to-date figures include revisions of data from previous months.

Users of Railway Carloadings (Monthly) current and historical data should be aware of a break in the continuity of these data. Starting with the January 1999 reference period, the commodities presented in the Railway Carloadings (Monthly) publication were modified to conform to the Standard Classification of Transported Goods (SCTG) and the number of carriers surveyed more than doubled from the eighteen carriers surveyed prior to 1999.

The additional carriers were primarily shortline carriers whose data were previously included with the data of mainline carriers. The change in commodity classes has had negligible impact on the reporting of bulk commodities (e.g., wheat, potash and coal) which represent the majority of the total number of cars and tonnes. However, the reporting of manufactured and miscellaneous goods has changed significantly.

Details of the commodities included in each SCTG class presented in **Railway Carloadings (Monthly)** are available upon request. For further information, please contact Transportation Statistics, Statistics Canada, Ottawa, Ontario, K1A 0T6 (tel.: 1-866-500-8400, Internet: *TransportationStatistics@statcan.ca.*)

<sup>1.</sup> Intermodal traffic is freight carried in containers or truck trailers that are loaded onto flat cars.

<sup>2.</sup> Non-Intermodal traffic is freight carried in bulk or loaded in box cars.

<sup>3.</sup> The Eastern and Western Divisions, for statistical purposes, are separated by an imaginary line running from Thunder Bay to Armstrong, Ontario. Freight loaded at Thunder Bay is included in the Western Division while loadings at Armstrong are reported in the Eastern Division.

Release date: April 2008

### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

### Information to access the product

This product, catalogue no. 52-001-X, is available for free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select Publications.

Frequency: Monthly / ISSN 1496-8592

For information on the wide range of data available from Statistics Canada, please call our national inquiries line at 1-800-263-1136.

### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, the Agency has developed standards of service which its employees observe in serving its clients.

To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on *www.statcan.ca* under About us > Providing services to Canadians.

### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.
