# **Highlights**

 Consumer prices rose 3.4% in July 2008 compared to July 2007, an increase from the 3.1% rise recorded in the 12 months to June 2008. Higher gasoline prices continued to exert the strongest upward pressure on consumer prices.

Chart 1
Percentage change in the consumer price index and major components from the same month of the previous year,
Canada, not seasonally adjusted

# **Briefing notes**

#### Highlights:

Consumer prices rose 3.4% in the 12 months to July 2008, up from the 3.1% posted in June. While higher gasoline prices continued to exert the strongest upward pressure on consumer prices, lower prices to purchase and lease passenger vehicles helped to offset the overall rise in consumer prices in July.

#### **All-items Consumer Price Index:**

- · July saw the highest increase in the 12-month CPI since March 2003. A 28.6% climb in gasoline prices in the 12 months to July 2008 was the primary cause for higher consumer prices.
- Both the 12-month variation in the consumer price index and the gasoline price index accelerated for the fourth consecutive
- Consumer prices excluding gasoline advanced 2.1%, up from the 1.8% annual rate of growth posted in June.
- An 8.9% drop in prices to purchase and lease passenger vehicles helped to partially offset increases in consumer prices in July.

#### Main contributors to the 12-month change of the all-items index (+3.4%):

#### Main upward contributors:

- Gasoline (+28.6%)
- Mortgage interest cost (+8.5%)
- Natural gas (+25.0%)
- Fuel oil and other fuels (+49.4%)

#### Main downward contributors:

- Purchase and leasing of passenger vehicles (-8.9%)
- Computer equipment and supplies (-12.0%)

#### Main contributors to the monthly change of the all-items index, not seasonally adjusted (+0.3%):

#### Main upward contributors:

- Natural gas (+8.8%)
- Gasoline (+1.2%)
- Electricity (+1.9%)

#### Main downward contributors:

Purchase and leasing of passenger vehicle (-2.2%)

#### Annual and monthly percentage change in the most quoted indexes

	Annual percentage		Monthly perce	entage
	Percentage change July 2008 from July 2007	Percentage change June 2008 from June 2007	Percentage change July 2008 from June 2008	Percentage change June 2008 from May 2008
		percent		
All-items Core consumer price index (CPI)	3.4	3.1	0.3	0.7
(Bank of Canada definition) All-items excluding energy Goods Services	1.5 1.6 3.2 3.6	1.5 1.6 2.5 3.7	0.1 0.2 0.4 0.3	0.1 0.3 1.1 0.3

#### Historical information on the main indices and the main contributors to the 12-month change

Index	Historical information
All-items index	3.4% rise (after increasing 3.1% in June). The steepest rise since March 2003 (+4.2%).
Core index	1.5% rise (identical to the increase recorded in June).
All-items index excluding energy	1.6% rise (identical to the increase recorded in June).
All-items index excluding gasoline	2.1% rise (after increasing 1.8% in June). The sharpest rise since August 2007 (+2.3%).
Goods index	3.2% rise (after increasing 2.5% in June).
Services index	3.6% rise (after increasing 3.7% in June).
Gasoline	28.6% rise (after increasing 26.9% in June). The sharpest rise since September 2005 (+34.7%).
Mortgage interest cost	8.5% rise (after increasing 9.0% in June).
Natural gas	25.0% rise (after increasing 9.6% in June).
Fuel oil and other fuels	49.4% rise (after increasing 49.3% in June).
Bakery products	13.2% rise (after increasing 12.3% in June).
Purchase and leasing of passenger vehicles	8.9% drop (after decreasing 8.4% in June). The largest drop since February 1956 (-12.2%).
Computer equipment and supplies	12.0% drop (after decreasing 13.2% in June).

#### Historical information on the main indices and the main contributors to the monthly change

Index	Historical information
All-items index	0.3% rise (after increasing 0.7% in June).
Core index	0.1% rise (identical to the increase recorded in June).
All-items index excluding energy	0.2% rise (after increasing 0.3% in June).
Goods index	0.4% rise (after increasing 1.1% in June).
Services index	0.3% rise (identical to the increase recorded in June).
Natural gas	8.8% rise (after increasing 8.2% in June). The sharpest rise since April 2007 (+9.0%).
Gasoline	1.2% rise (after increasing 5.8% in June).
Electricity	1.9% rise (after no change in June).
Purchase and leasing of motor vehicles	2.2% drop (after decreasing 0.5% in June).

## **Analysis**

Consumer prices rose 3.4% in July 2008 compared to July 2007, an increase from the 3.1% rise recorded in the 12 months to June 2008. Higher gasoline prices continued to exert the strongest upward pressure on consumer prices.

July saw the highest 12-month increase since March 2003. A climb in gasoline prices was the primary source of higher consumer prices in July. The 12-month variation in the Consumer Price Index (CPI) and the gasoline price index have been increasing at a faster pace over the past four months.

Consumer prices excluding gasoline advanced 2.1%, up from the 1.8% 12-month rate of growth posted for June.

Lower prices to purchase and lease passenger vehicles partially offset the impact of rising gasoline prices and eased the overall increase in transportation costs for consumers.

On a month-to-month basis, the seasonally unadjusted all-items CPI rose 0.3% between June and July 2008, a slowdown from the 0.7% increase posted between May and June 2008. A 2.2% drop in prices to purchase and lease passenger vehicles from June to July 2008 was the largest downward contributor on the monthly index.

The seasonally-adjusted monthly all-items CPI advanced 0.3% between June and July 2008, down from the 0.8% rise posted for June.

#### 12-month change: Consumers continue to feel the pinch of higher gasoline prices

Gasoline prices were the main factor behind the climb in consumer prices from July 2007 to July 2008.

Prices at the pump rose 28.6% in the 12 months to July 2008. While gasoline prices continued to rise, the overall increase in transportation costs were partially offset by lower prices to purchase and lease passenger vehicles, which fell 8.9% in July compared with the same month a year earlier. Overall, transportation costs rose by 6.1% in the 12 months to July 2008.

Chart 1
Price declines to purchase and lease passenger vehicles partially offsets rising gasoline prices

12-month percentage change, Canada

Source(s): CANSIM table number 326-0020.

The mortgage interest cost index advanced 8.5% from July 2007 to July 2008, down from the 9.0% increase posted in the 12 months to June. The slowdown in the rise in mortgage interest cost was due more to a softening of new housing prices rather than to lower mortgage interest rates.

Higher natural gas prices (+25.0%) also contributed to the rise in consumer prices in July. The increase in natural gas prices was partly due to a decline in prices that occurred at the same time last year and to recent increases related to oil prices.

Chart 2 Evolution of natural gas prices

Index, Canada, 2002=100, not seasonally adjusted

Source(s): CANSIM table number 326-0020.

Natural gas storage levels remained somewhat below normal due largely to high demand for natural gas to fuel electric generation for air conditioning. Increased costs associated with moving gas from producing regions have also influenced the rise in natural gas prices.

Prices for fuel oil and other fuels, products which are derived from oil, also put significant upward pressure on consumer prices in July.

A 4.3% rise in prices for food purchased from stores, led by a 13.2% rise in prices for bakery products, continued to exert upward pressure on consumer prices in July. Price increases for other food products closely related to grain, such as breakfast cereal, rice, pasta and flour and flour based mixes, continued to increase in the 12 months to July 2008.

Chart 3 Prices for food purchased from stores continue to rise

12-month percentage change, Canada

Source(s): CANSIM table number 326-0020.

The drop in prices to purchase and lease passenger vehicles helped to offset the rise of the all-items index in July. Competition among vehicle manufacturers remains strong as manufacturers compete for market share by increasing incentives.

Prices for computer equipment and supplies continued to fall in July (-12.0%), although the decline was the smallest since August 2003. Prices for other electronic equipment items such as video equipment and photographic equipment and supplies also continued their downward trend in July.

Various specials offered on furniture items also helped to mitigate the rise in consumer prices.

Lower prices for women's clothing also helped to dampen the rise in consumer prices in July. After remaining unchanged in June, prices for women's clothing fell 2.9% in the 12 months to July, primarily as a result of a large number of sales.

#### The provinces: The three most eastern provinces bear the brunt of higher increases in consumer prices

Consumers in Prince Edward Island (+5.3%), Newfoundland and Labrador (+4.2%), and Nova Scotia (+4.2%) faced the largest consumer price increases.

Gasoline prices contributed largely to the rise in consumer prices observed across the country. Gasoline prices rose the most in British Columbia (+31.5%).

Other provinces, especially those in Central Canada, also posted strong price increases for gasoline. In Ontario, gasoline prices rose 30.1%, and in Quebec, they increased 30.9%.

Besides higher prices for gasoline, price increases for other energy components, such as fuel oil and other fuels and electricity, rose sharply in Newfoundland and Labrador, Prince Edward Island and Nova Scotia in the 12 months to July. The rise in these energy components largely accounted for the growth in consumer prices posted in these provinces.

In Alberta, it was higher costs for owned accommodation that primarily pushed up consumer prices 3.5% in the 12 months to July. This was a substantial slowdown from the 4.4% rate of growth posted in June.

While consumers across the country faced higher prices for gasoline and mortgage interest costs, lower prices to purchase and lease passenger vehicles helped to offset these price increases. Changes in prices to purchase and lease passenger vehicles ranged from a 7.6% decrease in Quebec to an 11.4% decline in New Brunswick.

#### Month-to-month: Consumer prices advance at slowest pace since the start of 2008

The seasonally unadjusted month-to-month variation in consumer prices rose 0.3% in July, after increasing 0.7% in June. This was the slowest pace since the 0.2% drop recorded in January 2008.

Putting upward pressure on the monthly CPI in July was an increase in prices for energy components: An 8.8% increase in prices for natural gas, a 1.2% climb in gasoline prices and a 1.9% rise in prices for electricity.

A 2.2% drop in prices to purchase and lease passenger vehicles in July compared with June was the largest downward contributor to the monthly change.

On a seasonally adjusted monthly basis, consumer prices rose 0.3% in July, down from the 0.8% rise posted in June.

#### The 12-month variation of the Bank of Canada core index remains unchanged

The Bank of Canada's core index rose 1.5% from July 2007 to July 2008. This index is obtained by removing from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada. These volatile components are fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; heating oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies.

This is identical to the 12-month variation posted in the previous three months. The drop in prices to purchase and lease passenger vehicles helped to mitigate price increases in other consumer items included in the core index such as passenger vehicle insurance and bakery products.

The monthly seasonally unadjusted core index advanced 0.1%, identical to the rate of growth posted a month earlier.

The seasonally-adjusted monthly core index edged up 0.1% in July, after advancing 0.3% in June.

# Data quality, concepts and methodology

#### **Definition**

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Igaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

### Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Igaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

#### Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

#### Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

#### Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

### Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Prices Division.

Text table 1
Comparison of the 2005 and 2001 distribution<sup>1</sup> of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditu	res	2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
		percent

Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

<sup>1.</sup> Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. http://www.bankofcanada.ca/en/inflation/index.htm.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

### Whitehorse, Yellowknife and Igaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

#### Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

### Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

# **Explanatory notes for tables**

# Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

#### and

# Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

- 1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
- 2. Figures may not add to 100% due to rounding.
- 3. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.

# Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

# Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

#### Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

#### Table 4-2

- In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
- 2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.gc.ca.

#### Table 4-5

Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

#### Table 4-7

From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

### Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

# Table 6 Core consumer price index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

- The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.
- The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

# Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

- 1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
- A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

The annual index level is the average of the 12 individual monthly indexes.

### Table 8 Annual average percentage changes for the Consumer Price Index

#### Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

# Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

#### Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

- 1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- 2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- 3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

#### Table 9-6

- 1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- 2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- 3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.gc.ca.
- 4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

#### **Table 9-12**

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

- Food expenditure information below the aggregate level of "food purchased from stores" was unavailable 2. after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- 3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
- Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

# Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, not seasonally adjusted, historical data

- Data for Igaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Igaluit formed part of the newly-created territory of Nunavut.
- The annual index level is the average of the 12 individual monthly indexes. 2.

# Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
- Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
- 3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

#### Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
- Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected 2. the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Igaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
- The annual index level is the average of the 12 individual monthly indexes. 3.
- Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

# Table 14 Average retail prices, monthly, Canada

Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

#### Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

# Table 15 Inter-city indexes of retail price differentials, as of October 2006, for selected groups of consumer goods and services, not seasonally adjusted

Table 15 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of goods and services at the specified point in time.

Price data for the current inter-city retail price comparison table was drawn to a large extent from the price information collected for the production of the Consumer Price Index (CPI) for October 2006 (3). Statistics Canada collects prices as part of the regular monthly CPI survey for the purpose of measuring price change through time. The number of prices collected is sufficient for this purpose at current levels of publication. The CPI sample was not selected for the purpose of calculating average price levels and comparing them across regions. No attempt is made to ensure that the products selected for the purpose of calculating the CPI are comparable across regions. As a result, the number of price quotes that can be matched across cities can be small for some commodities.

Reliable inter-city price comparisons require that the sampled commodities be identical, or near identical, in different locations. This ensures that variations in index levels between cities are due to price differences and not to differences in product attributes.

In order to optimize comparability and to produce this table, price comparisons were initially made by pairing cities that are geographically close. This resulted in the following pairings:

St. John's Halifax Charlottetown-Summerside Halifax Saint John Halifax Ottawa Halifax Toronto Montreal Ottawa Toronto Toronto Winnipeg Regina Winnipeg Edmonton Winnipeg Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of detailed descriptions. Whenever possible, the items were matched by brand, quantity and with some regard for the comparability of retail outlets.

The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure.

The weights used for aggregating the various components of the city indexes to obtain the all-items index are based on the expenditure proportions of the consumers living in the 11 cities overall. The weights are currently based on 2001 consumer expenditure data and price updated to October 2006. The base, for which the index is equal to 100, is also the combined city average. Therefore, an index value of 102 means that the prices in that city are 2% higher than the combined city average.

It should be noted, especially in periods when prices are highly volatile, that the timing of price comparison and the relative rate of price change occurring in each location can significantly affect city-to-city retail price relationships. Since the retail prices used in this study are final prices faced by consumers, sales taxes and levies in effect in the various cities at the time of the price comparison can be of importance in explaining inter-city price differentials for items or groups of items that are subject to such taxes.

Shelter, as an expenditure category, was absent from the inter-city index program prior to 1999 because of methodological and conceptual issues associated with its measurement. For many products, adjusting for quality differences to ensure comparability across areas is relatively straightforward and can be done using traditional quality adjustment techniques. In the case of shelter however, its very diverse nature means that comparable matches across cities are difficult to make. Hedonic regression methods were used to adjust for quality differences among cities and produce more reliable inter-city comparisons of rental prices.

A rental equivalence approach is used to construct the inter-city price indexes for shelter services consumed by homeowners. Such an approach uses market rents as an approximation of the cost of shelter services faced by homeowners. This approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities. Furthermore, rents used in the index are those faced by existing renters and since the industry is regulated, they may not be indicative of rental prices faced by new renters.

#### Footnotes for table 15

- 1. The weights shown are rounded 2001 basket weights at June 2004 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2006.
- 2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
- 3. While most prices are for the specified month, the rents used are for the 12 months ending in October.
